

LSEG Autex IOI

Institutional Liquidity Discovery at Scale

LSEG Autex IOI helps institutional trading teams discover potential liquidity opportunities by distributing broker indications of interest (IOI) and trade advertisements across the global equity market

Processing approximately four million IOI messages each day, Autex IOI helps traders identify relevant trading interest, evaluate potential counterparties and support informed execution decisions

LSEG Autex IOI can be accessed through LSEG Workspace and integrated into execution workflows using REDI on Workspace and LSEG TORA.

Why Firms Use LSEG Autex IOI

Discover Institutional Liquidity

Liquidity Discovery

Identify relevant indications of interest and sources of natural liquidity before placing an order into the market.

Broker Interest

View broker indications of interest, trade advertisements and potential trading interest from counterparties.

Workflow Integration

Bring liquidity intelligence into existing market data, order management and execution workflows.

Execution Decision Support

Use IOI information alongside market data, analytics and order context to help determine how and where to execute.

Institutional Scale

Access IOIs and trade advertisements from institutional brokers across the global equity market.

A Connected Investment and Trading Workflow

Market Insight & Analytics

LSEG Workspace supports decision and intelligence including research, analytics, portfolio insight and AI-assisted investment workflows

Portfolio and Order Management

LSEG AlphaDesk supports hedge funds and asset managers across portfolio management, order management, compliance, order routing, execution, risk, accounting and investment operations within a cloud-based environment.

Pre-trade Liquidity Discovery

LSEG Autex IOI supports liquidity discovery through indications of interest and trade advertisements, helping traders identify potential liquidity before execution.

Execution Workflows

- REDI on Workspace - human-led execution workflows without leaving Workspace
- LSEG TORA - extended OEMS supporting multi-asset trading, broker connectivity, systematic workflows, API-driven automation, spread trading and advanced execution strategies.

Broker Connectivity

LSEG Autex Trade Route provides institutional connectivity between buy-side firms, brokers and trading venues.

The wider LSEG liquidity ecosystem includes LSEG FXall and Tradeweb, supporting access to FX and fixed income markets within the broader multi-asset workflow.

Integrated LSEG Market Data

Pricing, fundamentals, reference data and tick data support research, portfolio, execution and reporting workflows.

Systems Connectivity

LSEG Autex IOI can be used alongside REDI on Workspace, LSEG TORA, LSEG AlphaDesk and supported third party order and execution management systems.

Implementation, Support & Professional Services

LSEG supports firms in incorporating LSEG Autex IOI into trading workflows.

- User and entitlement setup
- Broker and liquidity source configuration
- LSEG Workspace integration
- REDI on Workspace and LSEG TORA integration
- User training
- Technical support

About LSEG Autex IOI

LSEG Autex IOI provides institutional liquidity discovery through the distribution of broker indications of interest. It helps buy-side traders identify relevant trading interest and connect liquidity intelligence with order and execution workflows.
