

Private Company data via database endpoint

Identify, analyse and monitor industries across global private markets with LSEG's comprehensive coverage, robust capabilities and granular, hard-to-find details.

LSEG's Private Company dataset offers comprehensive global coverage of private companies, featuring detailed and hard-to-find information. The data is sourced through a combination of proprietary in-house collections and leading third-party providers. The data is standardised to enable consistency and comparability – delivering a comprehensive, high-quality and actionable view of private companies across various stages and use cases.

As a key pillar of LSEG's broader Private Market data portfolio, our Private Company data via database endpoint is built on deep, long-standing relationships with leading third-party partners and the PE ecosystem. This strong foundation gives you access to a rich and diverse set of data sources – including corporate registries, PE portfolios, M&A transactions, public debt and pre-IPO activity – providing comprehensive insights into private companies.

Available as a database endpoint that offers unmatched depth, transparency and interoperability, covering a selection of Company Profiles, Fundamentals, and Officer and Director data. By addressing the industry's challenge of fragmented private market information you gain reliable, enriched insights across a diverse universe of private companies.

Key benefits

Standardised data enables comparability across markets and geographies.

Current and historical financials available to assess the strength and growth of a subset of companies and private markets.

Comprehensive global coverage of private markets and high-value content on the most important and relevant companies.

Greater ways to access data – available through our database endpoint as well as LSEG Workspace with seamless integration into MS365 enabling you to access insights without leaving your workflow.

Private Company data audience use cases

Private company data via database endpoint serves our various financial communities by streamlining particular workflows and enhancing decision-making across the following audiences and use cases.

Investment bankers and private equity professionals investigate and source deals, identify acquisition targets and divestiture opportunities, manage alliances, conduct financing activities, create valuation reports, perform due diligence and credit risk assessments, research contacts, and utilise screening tools around specific companies.

Investment managers and advisors can seek and find alternative investment strategies and research pre-IPO companies for possible investments, as well as research competitors, suppliers and peers, identify acquisition or partnership opportunities, and conduct market trend analysis and benchmarking.

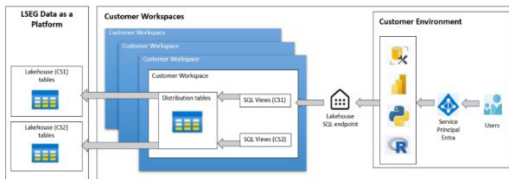

How to access Private Company data

In addition to LSEG Workspace, customers can access LSEG's Private Company data through our database delivery option. Microsoft Entra Service Principal credentials are provided to access a secure connection to a SQL endpoint.

The SQL endpoint allows customisation of usage around needs and preferences and easily integrates consistent data into in-house systems for further analysis. So whether you are looking to integrate and transform data on prem, or integrate into your own applications, there is a package and delivery mechanism suitable for you.

Database endpoint

This ready-to-use database provides data and historical financials accessible via SQL endpoints, for screening and retrieval in bulk. Download and integrate alongside your own proprietary data to build and make informed decisions.

Key capabilities

- Customise analysis with a wide range of associated data – including company profiles, business descriptions, industry classifications, headquarter locations and detailed financials to support deeper insights.
- Access current and historical financials (up to five years back) for strength and growth comparisons, with standardised financial statements to compare companies.
- Leverage seamless SQL access when applying filters, downloading data and integrating with proprietary systems.

Data Discovery

A web hosted [Data Discovery](#) experience that includes details about Private Company data including business glossaries, an overview of the content covered, statistics and field level data.

LSEG Workspace

A powerful, intuitive platform combining financial and non-financial data, analytics and exclusive news, with built-in transparency features.

Ask your Account Manager for further information and about how our Private Company data via database endpoint can support your specific use case.
