Explore new research with LSEG quant research accelerator

Generate new ideas using the expansive LSEG Quantitative Analytics data catalog and security master
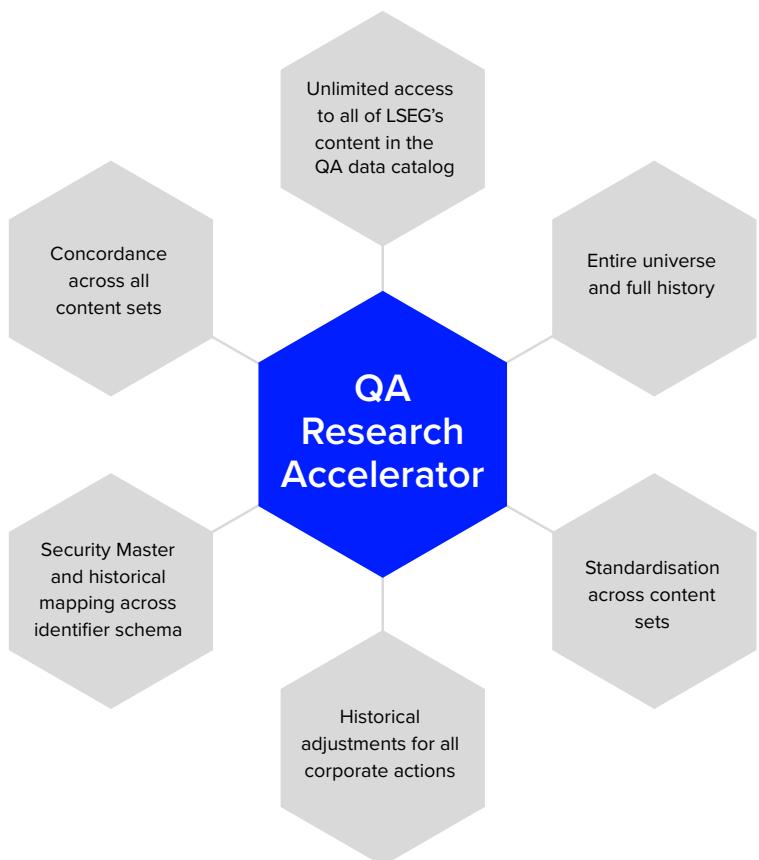

Transform your research and backtesting with the LSEG Quantitative Analytics Research Accelerator over Snowflake **and S3 Direct on AWS**. Instantly search and access an unrivaled range of ready-to-use data to help pivot your research focus.

Bypass the paperwork and cumbersome processes of trialling individual data sets and access the data required to generate ideas fast, expedite your search for alpha and develop your investment strategies. LSEG's Research Accelerator gives you more flexibility, allowing you to spend more time developing and testing ideas and less time managing data.

Directly access our integrated database and LSEG's best-in-class financial data. The Research Accelerator enables you to combine multiple LSEG data sets to find signals to build confidence in investment ideas, before creating a model. Also, with integrated proprietary data, you can speed up your insights to backtest your investment strategies with confidence, over multiple economic cycles.

The Research Accelerator includes the complete range of LSEG data sets with full coverage and history for your chosen testing approach. Combine point-in-time, industry standard, proprietary LSEG and alternative data with a comprehensive security master to generate new insights.

Access the only research environment with LSEG Datastream® pricing, LSEG Fundamentals, and LSEG I/B/E/S® estimates data alongside unique solutions such as LSEG StarMine® financial models. Explore and test as many content sets as you want and only pay for any individual content set license when you are ready to move into production with it.

- Unlimited access to all of LSEG's content in the QA data catalog
- Entire universe and full history
- Standardisation across content sets
- Historical adjustments for all corporate actions
- Security Master and historical mapping across identifier schema
- Concordance across all content sets

QA Research Accelerator
