

# LSEG Sustainability Intelligence

## Empowering the corporate sustainability and climate transition journey

Streamlining sustainability data and carbon emissions strategy, management and reporting for corporates, stock exchanges and financial institutions.

To meet climate change commitments at a regional and national level, organisations globally are increasingly seeking efficient, integrated and effective methods to account for their carbon emissions and exposure to climate risks and opportunities. A global shift towards standardised and consolidated reporting frameworks aims to streamline and improve the availability of sustainability data and reporting, to the benefit of both corporate reporting entities and financial institutions.

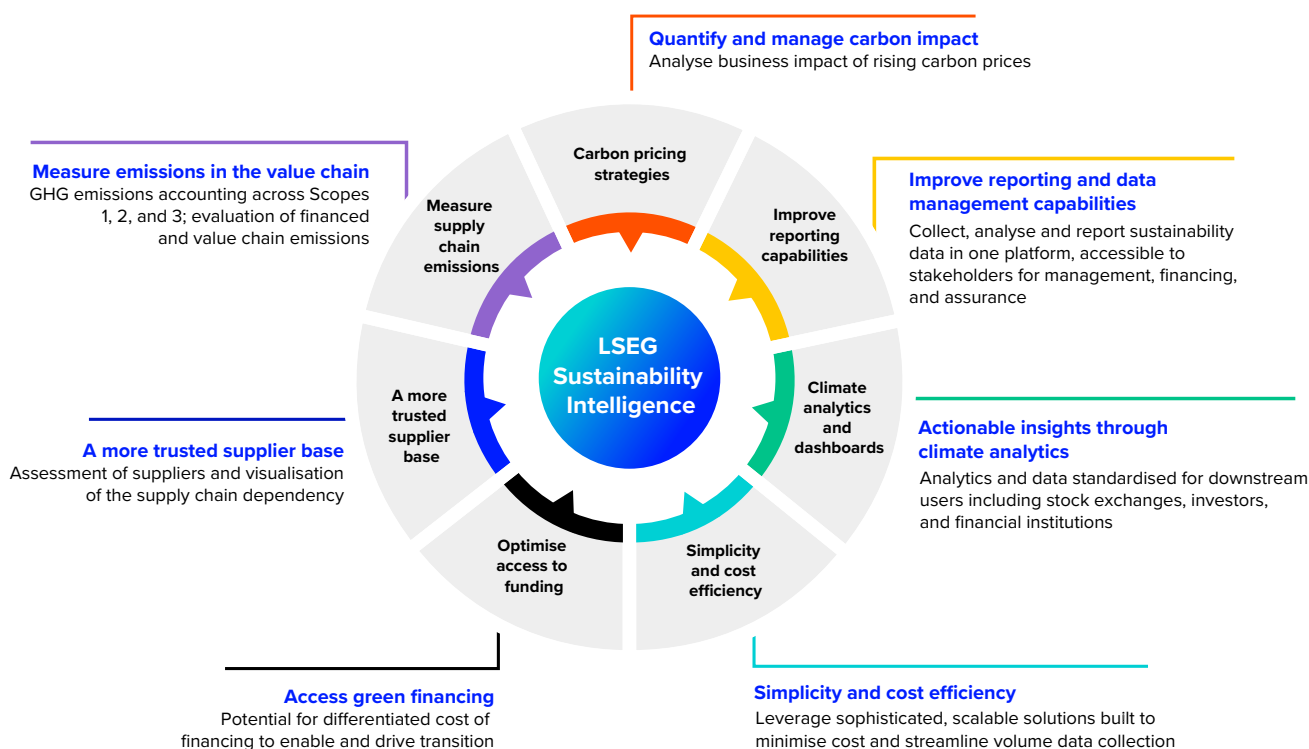

### LSEG's Sustainability Intelligence solution empowers companies to reach their climate goals

LSEG Sustainability Intelligence is an end-to-end climate management and disclosure solution developed by LSEG and designed to scale through stock exchanges, banks and other partners. The solution brings together a suite of core tools designed to help organisations understand and disclose their data and take action to mitigate climate risk exposure.

LSEG combines leading sustainability investment data and expertise with an easy-to-use, guided climate software experience. Scaling through partnership, we support comprehensive disclosure and data management including climate reporting, GHG accounting software, emissions reduction planning and value chain engagement for corporates, stock exchanges and banks.

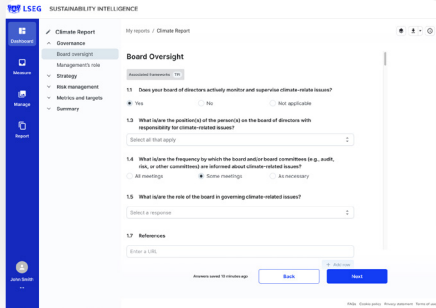

### A comprehensive suite of corporate sustainability data solutions

Automated ESG reporting and supply chain analysis integrated with access to green finance

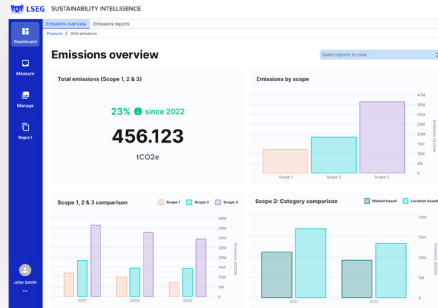

## Key features

Sustainability Intelligence intuitively guides corporates through the creation of their climate reports in line with international frameworks and standards, provides comprehensive carbon accounting tools, and identifies emissions hotspots and opportunities for decarbonisation. The solution applies a modular approach, enabling bespoke configuration and the addition of reporting frameworks and third-party tools.

**Climate disclosure and reporting:** guided, user-friendly capabilities for collecting and publishing key ESG metrics aligned to global frameworks and standards, including ISSB, GRI, TCFD and other leading frameworks.

**Emissions calculation:** build and visualise a comprehensive view of Scope 1, 2 and 3 emissions and identify top contributors to these carbon emissions in the value chain.

**Supplier engagement:** the platform's supplier engagement capabilities provide accurate carbon accounting, a visual representation of your emissions hotspots, and the ability to engage with suppliers who have the biggest impact on Scope 3 emissions\* to gather more accurate data and support decarbonisation efforts.

**Supplier engagement continued:** access automated supply chain analysis which can be integrated with access to green finance opportunities. Sustainability Intelligence interlocks with other LSEG tools to create opportunities for differentiated financing and embedding sustainability in procurement processes.

**Climate risk exposure:** LSEG's Scope 3 Carbon Accounting interface aggregates data captured directly from suppliers and portfolio companies to gather a more comprehensive, accurate picture of corporate climate risk exposures.

\*Scope 3 emissions on average account for 80% of the corporate carbon footprint. Measuring, identifying and managing GHG emissions in the value chain can be particularly challenging for large companies and financial institutions. Sustainability Intelligence provides a transparent, user-friendly solution to streamline Scope 3 emissions accounting.
