### Version history

<table>
<thead>
<tr>
<th>Workspace</th>
<th>Document</th>
<th>Summary</th>
</tr>
</thead>
</table>
| 1.24      | 124.07   | The following changes were made:  
− Update to the Troubleshooting appendix regarding the MMD installation issue  
− Minor update to Protocol support  
− Renaming RDP to Delivery Platform (corporate rebranding)  
− Updated Server software > Versions section |
|           | 124.06   | This version addresses the following:  
− Table rendering issues  
− Internal document links |
|           | 124.05   | Further clarification of Protocol support |
|           | 124.04   | Minor changes to the following sections:  
− Streaming protocols  
− Protocol support |
|           | 124.03   | Global release version, containing:  
− A minor change to the Configuring multiple servers section.  
− A known issue affecting Datastream for Office (DFO) users only. |
|           | 124.02   | Updating links to point to new LSEG site. |
|           | 124.01   | The following changes were made.  
− New digital certificates  
− The DPRM connection issue, affecting Workspace 1.23 only, has been fixed. |
|           | 123.03   | Added Appendix H: Unsupported packaging methods. |
|           | 123.02   | Updated Appendix J: Known issues to include DPRM connection issue. |
|           | 123.01   | The following changes were made:  
− Guide rebranded for initial LSEG Workspace pre-release.  
− Additional features added to the Configuration Manager |
|           | 122.02   | The following changes were made:  
− Added Admin configuration to the Configuration override order section  
− Added the disabled contribution sources setting to the shared configuration Settings table. |
|           | 122.01   | The following changes were made:  
− The Refinitiv ribbon add-ins table was updated  
− Added the Streaming protocols section  
− Minor changes to the shared configuration Settings table  
− Removed a no longer supported feature from the Logging section  
− Removed a fixed shared configuration file issue from the Appendix I: Known issues section |
|           | 121.05   | The System Test app is now described in its own guide, which can be found here:  
− Workspace System Test Guide |
|           | 121.04   | This release contains the following changes:  
− Added Configuring multiple servers section  
− Updated the Appendix J: Known issues section |
|           | 121.03   | Minor URL amendments |
|           | 121.02   | This version contains the following updates:  
− Added Uninstalling Workspace with custom paths to the Known issues section. |
|           | 121.01   | This version contains the following updates:  
− Added Logs Viewer section  
− Updated the --help commands  
− Updated the Error codes section  
− Added Mass deployment section  
− Revised the Default folder structures section  
− Some additional Workspace executable statements  
− Minor changes throughout to cover the new Workspace installer |
|           | 120.01   | This version contains information about the following updates:  
− New appendix covering shared configuration file creation and settings  
− ADH documentation location added  
− Updated executable statement parameters  
− Updates to Security section, including addition of TLS subsection  
− Minor changes to the Example domain list  
− Minor update to the DPRM section |

About this document

This guide describes IT-managed installations to platforms running on the following environments:

- Microsoft® Windows® directly
- Citrix®, specifically:
  - Windows application virtualization with Citrix XenApp® (published app or published desktop)
  - Windows desktop OS virtualization with Citrix XenDesktop®
- VMware®, specifically:
  - Horizon 8 Connection Server, Agent, and Client
  - Blast display protocol

This document also details the steps and any post-installation configuration and customization that is required to install the application.

Intended readership

The LSEG Workspace Installation and Configuration Guide is intended for IT specialists that are responsible for the installation and maintenance of Workspace and Messenger standalone.

LSEG Workspace rebranding

This first phase of LSEG Workspace rebranding is entirely cosmetic. For changes of a technical nature that may impact your installation and maintenance of Workspace, you will be given a minimum of nine months of notice, our standard obsolescence period, through the PCN system.

Software releases and end of life

Refer to the Workspace Support Policy, which can be found in the documentation section of the LSEG Workspace page.

For further information, see:

- PCN208374 – LSEG Workspace – Rolling obsolescence policy
- Workspace Support and Obsolescence FAQ

---

1 Instructions for macOS installation are provided in the Workspace Basic Installation Guide.
2 LSEG currently provides limited testing support and technical advice on Citrix Virtual Apps and Desktops (CVAD) solutions. However, customers deploying a CVAD solution should consider the following when deploying, updating, and running Workspace:
   - The impact of network latency and equipment used.
   - The potential for virtualization machines to adversely affect performance for end users.
   - Legacy products such as Eikon will not work in parallel with Workspace.
3 As summarized for Citrix, above, LSEG currently provides limited testing support for VMware and the same considerations should be applied when deploying.
Contact information

To receive further assistance, contact Support.
You can also provide feedback regarding this document through DocFeedback@lseg.com.
Pre-requisites

This section summarizes the information of which you should be aware prior to commencing the installation of Workspace.

In this section

- Verifying system requirements
- Virtualized environments

Verifying system requirements

Before installing Workspace, ensure that your hardware and software meet the minimum requirements.

Important: For an installation, creating a Workspace test user ID is highly recommended to validate the installation. For further assistance, contact your account team or Customer Success Manager.

LSEG strongly recommends that 3D Graphics Processing Unit (GPU) acceleration is enabled. Workspace is based on Chromium, which uses the GPU for rendering environments.

System and network testing

The System Test application helps you determine whether your computer meets the minimum hardware, software, and connectivity requirements to run Workspace. No personal information is sent to LSEG during this process.

For further information regarding the System Test applications, refer to the System Test Guide.

Virtualized environments

When designing a deployed solution, individual utilization should be considered in the planning. If specific information is required, it is recommended that a selection of pilot users is monitored so benchmark testing can be performed by the relevant vendor support team.

Important: If you encounter an issue; LSEG requests that you confirm the issue has been reproduced in a non-virtualized environment.

VDI support

Support is included with your subscription, when Workspace is installed according to our system requirements on a standalone desktop PC for one user.

Due to the inherently complex and distributed nature of these solutions, we cannot offer the same unconditional support as a standard desktop for the following:

- Terminal/Citrix Server
- VMware Server
- Other multi-user or virtualized environments
Help with installing and/or operating our software in these environments is strictly limited to a commercially reasonable effort. While this document makes every attempt to highlight the issues you may encounter, we can make no guarantees regarding a successful outcome.

If you encounter problems, we cannot investigate or escalate unless the issue is reproducible on a standalone desktop running Workspace, in a single instance environment.
Installing Workspace

Workspace can be installed on Windows, as a User or Machine Installation, and deployed to CVAD.

However, it is recognized that there is much innovation and change in our marketplace. As such, the content of this document is updated, as warranted by future changes in the marketplace, and the evolving needs of our software products.

In this section

- PC installation
- Citrix installation
- VMware installation
- Running Workspace Web access
- Post installation testing

PC installation

This section discusses the installation of Workspace onto personal computers.

Installation method summary table

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Location</th>
<th>Updated automatically</th>
<th>Windows service required</th>
</tr>
</thead>
<tbody>
<tr>
<td>--user</td>
<td>%LocalAppData%</td>
<td>✓</td>
<td>-</td>
</tr>
<tr>
<td>--machine-autoupdate-service</td>
<td>%ProgramFiles%</td>
<td></td>
<td>✓</td>
</tr>
<tr>
<td>--machine-autoupdate-no</td>
<td>%ProgramFiles%</td>
<td>%ProgramData%</td>
<td>✓</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>%ProgramFiles%</td>
<td>%LocalAppData%</td>
<td>Launch / Update location only</td>
</tr>
</tbody>
</table>

Workspace Help parameter options

When installing Workspace, you can use the --help parameter to list all parameters that are available.

The Command Prompt also lists all error codes that could be displayed during a Workspace installation. These codes are listed in the Error codes section.

Command line statements have the following structure, where one or more <option> parameters are non-mandatory:

RefinitivWorkspace-installer_x.xx.xx.exe <operation> <option>

---

4 Default locations. These are customizable during installation.
5 See Important note in Uninstalling Workspace.
6 A copy of the Installation (master image) will be created for each user when they first log into the machine. If the version of the master image changes, the local version is refreshed when a user next logs in.
All parameters are listed alphabetically in the following table:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>--machine-autoupdate-no</td>
<td>Machine installation, with no auto-updates.</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>Machine installation, with an auto-update per user.</td>
</tr>
<tr>
<td>--machine-autoupdate-service</td>
<td>Machine installation, with an auto-update service.</td>
</tr>
<tr>
<td>--uninstall</td>
<td>Uninstall Workspace.</td>
</tr>
<tr>
<td>--user</td>
<td>User installation. This is the default installation option.</td>
</tr>
</tbody>
</table>

---

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>--cachepath=&quot;&lt;Your cache path&gt;&quot;</td>
<td>Specify the cache file path.</td>
</tr>
<tr>
<td>--client-sso=&quot;&lt;Your ClientSSO URL&gt;&quot;</td>
<td>Allows you to set up Single Sign-On (SSO), once Workspace has completed installation. SSO settings are stored in either user-settings.json or machine-settings.json, depending on which installation mode was used for Workspace.</td>
</tr>
<tr>
<td>--forceInstall</td>
<td>Skips the check to ensure your system meets the pre-requisites.</td>
</tr>
<tr>
<td>--help</td>
<td>Displays the list of parameters in a second command prompt window.</td>
</tr>
<tr>
<td>--installpath=&quot;&lt;Your install path&gt;&quot;</td>
<td>Specify the installation path.</td>
</tr>
<tr>
<td>--installerlogpath=&quot;&lt;Your install log path&gt;&quot;</td>
<td>Specify the installation log file path.</td>
</tr>
<tr>
<td>--lang=&quot;&lt;lang&gt;&quot;</td>
<td>Allows you to specify the installation language. Where &lt;lang&gt; is: en English ja Japanese zh Chinese ko Korean</td>
</tr>
<tr>
<td>--logpath=&quot;&lt;Your log path&gt;&quot;</td>
<td>Specify the log files path.</td>
</tr>
<tr>
<td>--messengeronly</td>
<td>Installs Workspace Messenger only. This installation mode will not share the login session with Workspace.</td>
</tr>
<tr>
<td>--sharedconfig=&quot;&lt;shared config file path&gt;&quot;</td>
<td>Specify the path to a shared configuration file.</td>
</tr>
<tr>
<td>--shortcut-excel=&lt;FALSE / TRUE&gt;</td>
<td>Setting this parameter to false installs the product without the Refinitiv Workspace - Excel shortcut.</td>
</tr>
<tr>
<td>--shortcut-workspace=&lt;FALSE / TRUE&gt;</td>
<td>Setting this parameter to false installs the product without the Refinitiv Workspace shortcut.</td>
</tr>
<tr>
<td>--shortcuts=&quot;&lt;Your shortcuts path&gt;&quot;</td>
<td>Specify the location of the Refinitiv Workspace and Refinitiv Workspace - Excel shortcuts. Enter NONE to hide the shortcuts.</td>
</tr>
<tr>
<td>--silent</td>
<td>No information messages are displayed during installation.</td>
</tr>
</tbody>
</table>

---

**Customizing paths**

During the installation, you have the option of determining your own path for installation files, logs, cache files, and shortcuts. To do this, use one of the following commands:

**Action** | **Command**
--- | ---
Change install location | RefinitivWorkspace-installer_x.xx.xx.exe --installpath="<folder path>"
Change log location | RefinitivWorkspace-installer_x.xx.xx.exe --logpath="<folder path>"
Change cache location* | RefinitivWorkspace-installer_x.xx.xx.exe --cachepath="<folder path>"
Change icon shortcut location | RefinitivWorkspace-installer_x.xx.xx.exe --shortcuts="<folder path>"
Change installer log path | RefinitivWorkspace-installer_x.xx.xx.exe --installerlogpath="<folder path>"

You can use multiple parameters in one command line. For example:

RefinitivWorkspace-installer_x.xx.xx.exe --installpath="<folder path>" --cachepath="<folder path>"

---

* Do not use this flag without a clear purpose and understanding of the impacts, as it may result in degraded product experience.
* Silent mode is enabled when installing, updating, or uninstalling Workspace, using the command line.
* See Cache path definition in the Known issues section.
Performing a User installation

When you perform a user installation, files are created in the %LocalAppData%\Refinitiv\Refinitiv Workspace\ folder.

To install Workspace on a user basis:
1. Download the Workspace package.
2. Run the .exe file or use the Workspace command lines using the command prompt app. In a user installation, administrator rights are not required.
3. Follow the on-screen instructions to install Workspace:

Performing a Machine installation

With the auto-update Windows service

This is the recommended installation mode and is the preferred method for your organization, where:

- Users are not allowed to run programs from areas where they have no write permissions on %ProgramFiles%.
- Applications are reviewed before being approved across your organization, to ensure that they do not undermine application whitelisting. This is especially important for scripting languages, which have their own execution environment.

For this installation, files are created in the following folder:

<table>
<thead>
<tr>
<th>Type of OS</th>
<th>Installation</th>
<th>Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows</td>
<td>Default</td>
<td>%ProgramFiles%\Refinitiv\Refinitiv Workspace\</td>
</tr>
</tbody>
</table>

10. To review help for the RefinitivWorkspace-installer_x.xx.xx.exe command, add the parameter --help.
11. For further details, see the Workspace Basic Installation Guide.
12. To perform any per machine installation, you require administrator access rights.
To install Workspace on a machine basis:
1. Download the Workspace package
2. Do either of the following:
   a. Run the executable, taking the **Install for all users on this computer** option
   - Or
   a. Open a Command Prompt window
   b. Run `RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate-service --sharedconfig="<file path>"`  

With auto-update per user
This installation mode is the preferred method for your organization, where:
- Users are not allowed to run programs from areas where they have no write permissions on `%ProgramFiles%`.
- Applications are reviewed before being approved across your organization, to ensure that they do not undermine application whitelisting. This is especially important for scripting languages, which have their own execution environment.

For this installation, files are created in the following folders:

<table>
<thead>
<tr>
<th>Type of OS</th>
<th>Installation Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows</td>
<td>%ProgramFiles%\Refinitiv\Refinitiv Workspace\</td>
</tr>
<tr>
<td></td>
<td>%LocalAppData%\Refinitiv\Refinitiv Workspace\</td>
</tr>
</tbody>
</table>

**Important:** The master image must be updated on a regular basis – in accordance with the [Support Policy](#) – to avoid the situation where a new user on a machine can install a version of Workspace into their profile that is no longer supported.

To install Workspace on a machine basis:
1. Download the Workspace package
2. Open a Command Prompt window
3. Run `RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate-peruser --sharedconfig="<file path>"`

Without auto-updates
This installation mode is the preferred method for organization running hot-desking, gold images, non-Persistent VDIs, or Provisioning Services (PVS) with configuration to clear changes once user close their Windows sessions.

---

13 For further information, see the [Workspace Basic Installation Guide](#).
14 See Important note in [Uninstalling Workspace](#).
15 Copy installation location.
16 Once the master image has been copied to the profile of the user, the user needs to restart their machine.
17 Defining a shared configuration file (or files, for failover purposes) is optional but strongly recommended for mass configuration.
For this installation, files are created in the following folder:

<table>
<thead>
<tr>
<th>Type of OS</th>
<th>Installation</th>
<th>Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>Windows</td>
<td>Default</td>
<td>%ProgramFiles%\Refinitiv\Refinitiv Workspace\</td>
</tr>
</tbody>
</table>

To install Workspace without auto-updates:
4. Download the Workspace package
5. Open a Command Prompt window
6. Run `RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate-no --sharedconfig="<file path>"`  

Performing an installation using your Single Sign On URL

Using a shared configuration file
Defining a shared configuration file (or files, for failover purposes) is optional but strongly recommended for mass configuration.

Using the command line
To install Workspace using your Single Sign On (SSO) URL, do the following:
1. Download the Workspace package.
2. Open a Command Prompt window.
3. Add the appropriate parameter from the table below, depending on your environment:

<table>
<thead>
<tr>
<th>Environment</th>
<th>Additional installation parameters</th>
<th>Settings location</th>
</tr>
</thead>
<tbody>
<tr>
<td>User</td>
<td><code>--client-sso=&lt;client SSO URL&gt;</code></td>
<td>user-settings.json</td>
</tr>
<tr>
<td>Machine</td>
<td><code>--client-sso=&lt;client SSO URL&gt;</code></td>
<td>machine-settings.json</td>
</tr>
</tbody>
</table>

Citrix installation
This section addresses the currently supported scenarios for Workspace deployment to CVAD. However, it is also recognized that there is much innovation and change in our marketplace. As such, the content is updated, as warranted by future changes in the marketplace, and the evolving needs of our software products.

**Important!** Workspace installers require administrator rights to create their own registry path entries.

Installing Workspace for Citrix XenApp
1. Check that no previous Eikon registry keys are set.

**RELATED LINKS**
- Customizing installation paths
- Appendix C: Command line statements

---

17 This parameter should be added to the installer executable, also in combination with additional parameters.
2. Ensure that the following registry keys are applied, to disable Citrix API hooks for a single executable file:  

<table>
<thead>
<tr>
<th>Version</th>
<th>CVAD 7 1912 LTSR</th>
<th>XenApp 7.6 LTSR</th>
<th>XenApp 7.15 LTSR</th>
</tr>
</thead>
<tbody>
<tr>
<td>Key(s)</td>
<td>No modification</td>
<td>XenApp\CtxHook</td>
<td>XenApp\CtxHook</td>
</tr>
<tr>
<td></td>
<td>to registry</td>
<td>HKLM\SOFTWARE\Citrix\CtxHook</td>
<td>HKLM\SOFTWARE\Wow6432Node\Citrix\CtxHook</td>
</tr>
<tr>
<td>Value name</td>
<td>ExcludedImageNames</td>
<td>UviProcessExcludes</td>
<td></td>
</tr>
<tr>
<td>Type</td>
<td>REG_SZ</td>
<td>REG_SZ</td>
<td></td>
</tr>
<tr>
<td>Value to add</td>
<td>RefinitivWorkspace.exe</td>
<td>RefinitivWorkspace.exe</td>
<td></td>
</tr>
</tbody>
</table>

3. To show the Workspace context menu when right-clicking the Windows taskbar, refer to the Citrix Support Knowledge Center article CTX131995, *User Cannot Launch Application in Seamless Mode in a Provisioning Services Server when XenApp Optimization Best Practices are Applied.*

4. On the Citrix server, to change to installation mode, use the command line:
   
   ```
   Change user /install
   ```

5. To install Workspace, use the following command line, which includes the log and cache paths, which must point to the same location from where `RefinitivWorkspace.exe` is run:
   
   ```
   RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate-no --logpath="<folder_path>" --cachepath="<folder_path>"
   ```
   
   – However, it is recommended that you define a shared configuration file (or files, for failover purposes) using the `--sharedconfig="<file_path>"` parameter. This is optional but strongly recommended for mass configuration.

6. Once the installation has finished, change back to execute mode, using the command line:
   
   ```
   Change User /execute
   ```

**Publishing Workspace applications for XenApp**

To complete the installation, you must publish both Workspace and Refinitiv Workspace -Excel applications in Citrix XenApp.

To do this, use your usual configuration software, whether Citrix or third party, with the following parameter settings:

<table>
<thead>
<tr>
<th>Product</th>
<th>Parameter</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Workspace</td>
<td>Path to the executable file</td>
<td><code>&lt;installation_path&gt;</code>RefinitivWorkspace.exe</td>
</tr>
<tr>
<td></td>
<td>Working directory</td>
<td><code>&lt;installation_path&gt;</code></td>
</tr>
<tr>
<td>Workspace for Excel</td>
<td>Path to the executable file</td>
<td><code>&lt;installation_path&gt;</code>RefinitivWorkspace.exe</td>
</tr>
<tr>
<td></td>
<td>Command line argument</td>
<td><code>--excel</code></td>
</tr>
<tr>
<td></td>
<td>Working directory</td>
<td><code>&lt;installation_path&gt;</code></td>
</tr>
</tbody>
</table>

---

19 For further information, see [https://support.citrix.com/article/CTX107825](https://support.citrix.com/article/CTX107825).

20 Reboot from the VDA required.

21 Process names have a 14-character limit. For example, to exclude `longappname.exe`, you add `longappname.exe`.

22 If you want to use the Session Sharing Chrome Extension, add `Refinitiv-host.exe`.

23 See Cache path definition in the Appendix J: Known issues section.

24 For further information, see step 3 of Setting up configuration manager.
Installing Workspace for Citrix XenDesktop

If you use gold images, non-Persistent VDIs, or Provisioning Services (PVS) with configuration to clear changes after the user closes a session, you must install Workspace in *without auto-updates* mode using the following argument:

```
RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate=no --sharedconfig="<file path>"
```

In most cases, the Per-Machine and Per-User installation modes of Workspace are also supported in Citrix XenDesktop.

1. Log and Cache paths must point to the location from where `RefinitivWorkspace.exe` is run.

VMware installation

This section describes the installation of products that are required for Workspace deployment to VMware.

Installing Workspace for VMWare Horizon virtual app

1. Change to installation mode:
   On the Horizon server, use the command line:
   ```
   change user /install
   ```

2. Install Workspace:
   In a command-line interpreter, such as Command Prompt, type the following command line:
   ```
   RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate=no --logpath="<folder_path>" --cachepath="<folder_path>"
   ```
   **Important!** It is strongly recommended, particularly for mass configuration, that you define a shared configuration file (or multiple files, for failover purposes). This is done by using the `--sharedconfig="<file_path>"` parameter.

3. Return to execute mode:
   Once the installation has finished, change back to execute mode, using the following command line:
   ```
   change user /execute
   ```

---

25 The command line is run from the folder where `RefinitivWorkspace.exe` file is located and contains paths to the required log and cache file locations.

26 It is strongly recommended, particularly for mass configuration, that you define a shared configuration file (or multiple files, for failover purposes). This is done by using the `--sharedconfig="<file_path>"` parameter.

For further information about shared configuration files, see step 3 of the *Setting up configuration manager*. 

---

LSEG Workspace Installation and Configuration Guide
Document Version 124.07
Configuring virtual applications on Windows Server

Installation is completed by publishing both Workspace and Refinitiv Workspace - Excel applications in the VMWare Horizon virtual app.

To publish the applications, perform the following steps using the Horizon Console:

1. In Horizon Console, select **Inventory > Applications**
2. In the Application Pools panel, select **Add > Add Manually**
3. For Workspace, in the **Add Application Pool** panel, complete the form using the following details:

<table>
<thead>
<tr>
<th>In this field…</th>
<th>Type or select this…</th>
</tr>
</thead>
<tbody>
<tr>
<td>ID</td>
<td>RefinitivWorkspace</td>
</tr>
<tr>
<td>Display Name</td>
<td>RefinitivWorkspace</td>
</tr>
<tr>
<td>Path</td>
<td>&lt;install_path&gt;\Refinitiv\RefinitivWorkspace\RefinitivWorkspace.exe</td>
</tr>
<tr>
<td>Start Folder</td>
<td>&lt;install_path&gt;\Refinitiv\RefinitivWorkspace\</td>
</tr>
<tr>
<td>Entitle Users after Adding Pool</td>
<td>Select this checkbox</td>
</tr>
<tr>
<td>Multi-Session Mode</td>
<td>Select <strong>Disabled</strong></td>
</tr>
</tbody>
</table>

4. Click **Submit**

The application appears in the **Application Pools** panel

5. Select **Add > Add Manually**
6. For Refinitiv Workspace - Excel, complete the form using the following details:

<table>
<thead>
<tr>
<th>In this field…</th>
<th>Type or select this…</th>
</tr>
</thead>
<tbody>
<tr>
<td>ID</td>
<td>RefinitivWorkspaceExcel</td>
</tr>
<tr>
<td>Display Name</td>
<td>Refinitiv Workspace - Excel</td>
</tr>
<tr>
<td>Path</td>
<td>&lt;install_path&gt;\Refinitiv\RefinitivWorkspace\RefinitivWorkspace.exe</td>
</tr>
<tr>
<td>Start Folder</td>
<td>&lt;install_path&gt;\Refinitiv\RefinitivWorkspace\</td>
</tr>
<tr>
<td>Parameter</td>
<td>--excel</td>
</tr>
<tr>
<td>Entitle Users after Adding Pool</td>
<td>Select this checkbox</td>
</tr>
<tr>
<td>Multi-Session Mode</td>
<td>Select <strong>Disabled</strong></td>
</tr>
</tbody>
</table>

7. Click **Submit**

The application appears in the **Application Pools** panel

---

27 The **Display Name** value is a free text field. However, the structure of the ID, Path, and Start Folder entries are a requirement.
8. In the Application Pools panel, click **Entitlements**

9. In the **Add Entitlements** panel, click **Add**

The **Find User or Group** panel, opposite, is displayed

10. Use the fields in this panel – **Domain**, **Name/User Name**, and **Description** – search for existing VMware users and select the checkboxes next to their details

11. Click **OK**

### Installing Workspace for VMWare Horizon virtual desktop

If you use instant clone desktop pools (golden image), or automated full-clone desktop pools, configured to clear changes after the user closes a session, you must install Workspace using the no automatic update mode. To do so, use the following command line:

```
RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate-no --sharedconfig="<file_path>"
```

In most cases, the Per-Machine and Per-User installation modes of Workspace are also supported for VMWare Horizon virtual desktop.

### Running Workspace web access

Workspace is also accessible through the Internet or private network.

**Accessing through the Internet**

To access the Workspace sign-in page:
- Enter the following URL into your browser:
  - `https:\workspace.refinitiv.com\web`

**Accessing through a private network**

To access the Workspace sign-in page:
- Enter the following URL into your browser:
  - `https:\workspace.extranet.refinitiv.biz\web`

---

28 Although not shown in this example, as for the virtual app, the command line should include the log and cache paths, which must point to the same location from where `RefinitivWorkspace.exe` is run.
Post installation testing

Once Workspace has been installed, you can test the data retrieval functions using the testing tool provided in Refinitiv Workspace - Excel.

Downloading the tool

To download the testing tool, do the following:

1. Run Refinitiv Workspace - Excel
2. Under the Workspace menu:
   a. Sign in, if necessary
   b. Click Templates
   c. In Search for templates..., type test and press Enter
   d. In the first search result panel, Refinitiv Workspace – Microsoft Excel Functions Test, click the Download button

Once downloaded, the tool template opens automatically:

Running the tool

After checking the Prerequisites, listed in the Instructions section, do the following:

1. Click the Results worksheet tab
2. Click the START THE TEST button

The tests usually take less than a minute to run and, should an error occur, you are presented with diagnostic data under the relevant tab.
Uninstalling Workspace

You can uninstall Workspace, by:
- Using the installer user interface, or
- Using a command

Using the installer user interface

You can uninstall Workspace using the standard add and remove functions in Windows and macOS. For example:

1. In Windows, under **Settings > Apps & features**, select **Refinitiv Workspace** and click **Uninstall**
2. In the confirmation prompt, click **Uninstall** again to open the installer UI, opposite
3. Click **Uninstall**
4. Once the uninstallation is complete, click **Exit**

Using a command

You can uninstall Workspace using the following command line:

- `RefinitivWorkspace.exe --uninstall`

**Important:** When the `--machine-autoupdate-peruser` installation method is used, running the uninstallation command removes the Workspace instance in the profile under which it is run. For instance, if the master image is removed, all clone images will remain installed.

Log file location

The uninstallation log file is stored in the `%Temp%\Refinitiv Workspace Uninstall Logs\` folder.

---

29 The app removal function in macOS deletes the application folder without displaying the Workspace-specific UI.
Running a mass deployment

About mass deployment
You can deploy LSEG Workspace with your own mass deployment tool. To do so, follow the four stages summarized below:

Stage 1: Prepare installation and shared configuration files
Stage 2: Prepare the installation command line and create an install script
Stage 3: Ensure that the installation, shared configuration, and the install script files are in a shared location
Stage 4: Execute the install script or command line using your mass deployment tool

Prepare installation and shared configuration files
1. Download the Workspace Installer from the Workspace download page. The file has the following naming structure, where x.xx.xx is the version number:
   - RefinitivWorkspace-installer_x.xx.xx.exe
2. Create a config.json file
   - For example:
     ```json
     {
       "EIKON.CONNECTION.MODE": "private",
       "EIKON.LOG.TRACELEVEL": "warn",
       "REFINITIV.WORKSPACE.RUN ABOVE NORMAL PRIORITY": "true",
       "REFINITIV.WORKSPACE.TRADING.PRINTERS_NAME": "Microsoft Print to PDF",
       "EIKON.INTRANET OVERRIDE.URL": "C:\Workspace\config.json",
       "CLIENTSSO URL.ENABLED": "true",
       "CLIENTSSO URL": "https://myapps.testssso.com",
       "CLIENTSSO REFINITIV_URL": "https://myapps.testssso.com",
       "EIKON.STREAMING.API.LOCAL ENABLE": "true",
       "EIKON.STREAMING.API.LOCAL SESSIONS": ":["Wss:\test-ads-
sharedconfig.com:15000\WebSocket"]",
       "EIKON.STREAMING.API.LOCAL DACS USERNAME": "permit_all_exchanges",
       "EIKON.STREAMING.API.LOCAL DACS POSITION": "%USERDETAILS.LASTNAME%_%USERDETAILS.UUID"
       "EIKON.STREAMING.API.LOCAL DEFAULTSOURCE": "IDN_RF_2",
       "EIKON.STREAMING.JETQUOTES DESKTOP CONFLATION ENABLE": "true",
       "EIKON.STREAMING.JETQUOTES DESKTOP CONFLATION": "3000",
       "EIKONPROTOCOL ISDEFAULTAPPLICATION": "true"
     }
     ```

Prepare the installation command line and an install script
For further information about installation command lines, refer to the Workspace Help parameter options section, under PC installation.
For an example of an install script (install.cmd), see the Script examples section.
Ensure all necessary files are in a shared location

The following files must be in a common location:
- RefinitivWorkspace-installer_x.xx.xx.exe
- config.json
- config_fallback.json (optional)
- install.cmd

Execute the install script using your mass deployment tool

Run the installation script using your deployment tool.

Script examples

This section contains examples of the following scripts for LSEG Workspace:
- Installation
- Update
- Rollback
- Uninstallation

Install (install.cmd) script example:

```
@echo off
::----- Identify the command's parameters to install the software
SET VERSION=1.20.38
SET REFINITIV_WORKSPACE_INSTALLER=C:\Workspace\RefinitivWorkspace-installer %VERSION%.exe
SET REFINITIV_WORKSPACE_SHARED_CONFIG_FILE=C:\Workspace\config.json
SET REFINITIV_WORKSPACE_SHARED_CONFIG_FALLBACK_FILE=C:\Workspace\config_fallback.json
SET DEPLOYMENT_MODE=--machine-autoupdate-service
SET REFINITIV_WORKSPACE_INSTALL_PATH=C:\rw\installpath
SET REFINITIV_WORKSPACE_LOG_PATH=C:\rw_custpath\log
SET REFINITIV_WORKSPACE_CACHE_PATH=C:\rw_custpath\cache
SET REFINITIV_WORKSPACE_SHORTCUTS_PATH=C:\rw_custpath\shortcuts
::----- Workspace Installation -----
"%REFINITIV_WORKSPACE_INSTALLER%" %DEPLOYMENT_MODE% --sharedconfig="%REFINITIV_WORKSPACE_SHARED_CONFIG_FILE%";%REFINITIV_WORKSPACE_SHARED_CONFIG_FALLBACK_FILE%" --silent;
:: "%REFINITIV_WORKSPACE_INSTALLER%" %DEPLOYMENT_MODE% --sharedconfig="%REFINITIV_WORKSPACE_SHARED_CONFIG_FILE%";%REFINITIV_WORKSPACE_SHARED_CONFIG_FALLBACK_FILE% --installpath="%REFINITIV_WORKSPACE_INSTALL_PATH%" --cachepath="%REFINITIV_WORKSPACE_CACHE_PATH%" --logpath="%REFINITIV_WORKSPACE_LOG_PATH%" --shortcuts="%REFINITIV_WORKSPACE_SHORTCUTS_PATH%" ;
```
Workspace update (update.cmd) script example:

```
@echo off
:------ Identify the command's parameters to install the software
SET VERSION=1.21.365
SET REFINITIV_WORKSPACE_INSTALLER=C:\Workspace\RefinitivWorkspace-installer %VERSION%.exe
SET DEPLOYMENT_MODE=--machine-autoupdate-service
:: ----- Workspace Software Update ------
"%REFINITIV_WORKSPACE_INSTALLER%" %DEPLOYMENT_MODE% --silent;
:: "%REFINITIV_WORKSPACE_INSTALLER%" %DEPLOYMENT_MODE% --
sharedconfig="%REFINITIV_WORKSPACE_SHARED_CONFIG_FILE%;%REFINITIV_WORKSPACE_SHARED_CONFIG_FALLBACK_FILE%" --
installpath="%REFINITIV_WORKSPACE_INSTALL_PATH%" --
cachepath="%REFINITIV_WORKSPACE_CACHE_PATH%" --
logpath="%REFINITIV_WORKSPACE_LOG_PATH%" --
shortcuts="%REFINITIV_WORKSPACE_SHORTCUTS_PATH%";
```

Rollback (rollback.cmd) script example:

```
@echo off
:------ Identify the command's parameters to rollback the software
SET REFINITIV_WORKSPACE_INSTALL_PATH=C:\Program Files\Refinitiv\Refinitiv Workspace
:: ----- Workspace Uninstallation ------
"%REFINITIV_WORKSPACE_INSTALL_PATH%\RefinitivWorkspace.exe" -rollback --silent;
```

Uninstallation (uninstall.cmd) script example:

```
@echo off
:------ Identify the command's parameters to uninstall the software
SET REFINITIV_WORKSPACE_INSTALL_PATH=C:\Program Files\Refinitiv\Refinitiv Workspace
:: ----- Workspace Uninstallation ------
"%REFINITIV_WORKSPACE_INSTALL_PATH%\RefinitivWorkspace.exe" -uninstall --silent;
```
Configuring Workspace

You can configure Workspace using the Configuration Manager, which is accessed by running the Workspace executable with the `--config-manager` parameter in a Command Prompt window or by selecting the Help > Configuration Manager option in Workspace.

In this section
- Setting up config manager
- Creating a new config file manually
- Configuring Single Sign On (SSO) for browser-based Workspace

Configuration Manager command lines

The command line you use depends on the installation type:
- For User installations, use the command:
  ```
  "<InstallDir>\Refinitiv\Refinitiv Workspace\RefinitivWorkspace.exe" --config-manager
  ```
- For Machine installations, use the command:
  ```
  "<InstallDir>\Refinitiv\Refinitiv Workspace\RefinitivWorkspace.exe" --config-manager --machine
  ```

Setting up configuration manager

In the Configuration Manager, choose your settings for the following panels:

1. In the **Network** panel, set the connection type in your environment to either Internet (the default value) or private network.
2. In the **Client SSO** panel, if you have SAML 2.0 set up, enter the URL in the Client Single Sign On (SSO) field.
3. In the **Shared Configuration** panel, select whether you are using a shared configuration, which overrides other settings.

**Important!** Defining a shared configuration file (or files, for failover purposes) is optional but strongly recommended for mass configuration, as it allows you to define configuration parameters for all users from a single location.

Workspace uses different **settings.json** files based on the type of installation:

- For User installations, the file stores user-specific settings that are controlled by the user and can be found in the following location:
  %AppData%\Refinitiv\Refinitiv Workspace\Config\user-settings.json

- For Machine or Hot-Desking installations, the file stores machine-specific settings that are controlled by elevated computer administrator rights and can be found in the following location:
  %ProgramData%\Refinitiv\Refinitiv Workspace\Config\machine-settings.json

You can specify one or, for failover purposes, more configuration files that can be used across multiple desktops by putting these files on a shared drive or Web server (formerly Configuration Proxy concept).

To do this:

a. Click **Export** and navigate to the configuration file, `<override_settings>.json`, from the Configuration Manager.

b. Place this file on a shared drive or a Web server.

c. Enter the URL or UNC path of the file into the installation command line, or add this path into the Configuration Manager directly. For example:

\myserver\config\refinitiv\override-settings.json

4. In the **Streaming** panel, you can choose streaming sources and whether to activate streaming conflation.

The **Streaming Conflation** rate is used for desktop performance management by reducing CPU usage in downloading streaming data. In effect, it reduces data refresh rate from the default to every 1.5, 3, or 6 seconds.

5. Also, in the **Streaming** panel, choose your **Streaming Data Retrieval** source. Data can

---

30 A shared `<override_settings>.json` configuration file takes priority over local user-`settings.json` or machine-`settings.json` configuration files. When using the `--sharedconfig` parameter, Workspace reads the configuration from the specified location every time it is launched.

31 Currently, this capability is for Workspace desktop access only and will not affect the conflation settings of the Workspace add-in running under Microsoft Office.

On Workspace desktop, the highest generally supported conflation rate is 300ms. However, certain exceptions, such as news and chart apps, can run at higher update rates.
be streamed from either a Delivery Platform (formerly RDP) or by defining one or more local LSEG Real-Time Advanced Distribution Servers (formerly ADS).

In Configuration Manager, you can configure the WebSocket protocol to connect to the Workspace platform for streaming services:

- WebSocket Secure (wss:) for encrypted connections, and
- WebSocket (ws:) for unencrypted connections

Additional customer-managed sites use this connectivity to create a connection to the local LSEG Real-Time Advanced Distribution Server.

Some proxy servers may not support (or have disabled support for) the WebSocket protocol, which may cause Workspace streaming-related features not to work.

You must do the following:

a. For Internet, allow WebSocket connectivity to the following URLs:
   - *.refinitiv.com
   - *.refinitiv.net

b. For Delivery Direct, allow WebSocket connectivity to the following URLs:
   - *.refinitiv.biz
   - *.refinitiv.net

6. In the Streaming > Servers panel, enter the LSEG Real-Time Advanced Distribution Server IP address and hostname, together with the port. The default LSEG Real-Time Distribution System (formerly TREP) port for WebSocket is 15000.

   Click + to add multiple servers, which are called in turn if connection to the Primary server fails.

7. In the Streaming > Feeds panel, configure feeds provided by local LSEG Real-Time Advanced Distribution Server.

   In supported Workspace versions, key letters can be used as single-character shortcuts to additional feed sources. For example, LSEG Real-Time Advanced Transformation Server (formerly ATS) is key letter A.

   For Office aliases, there is a limit of 32 characters.

8. In the Streaming > DACS panel, enter the LSEG Real-Time Data Access Control System username and password.

---

32 Other protocols can be configured in your shared configuration file. For more information, see the Streaming protocols section.
33 The WebSocket(ws) protocol provides full-duplex communication channels over a single TCP connection. For further information, see RFC 6455: The WebSocket Protocol (rfc-editor.org).
34 Only one server or DNS can be entered for each line.
35 Workspace supports only standard ASCII (Latin) alphabetic characters. That is, the values A-to-Z or a-to-z.
36 A subset of ASCII printable characters is supported. That is, the values a-to-z, A-to-Z, and 0-to-9. Special characters (#, $, &, and so on) are not supported.
9. In the **Printers** panel, select the default printer or output mechanism that is to be used to print trading tickets silently. That is, without the need to select the printer each time.

10. In the **Other** panel, you can choose whether Workspace is to run at above normal priority by selecting the **Run At the highest Available Process Priority Level** checkbox. You can also select whether links from LSEG apps open in Workspace or Eikon. Finally, the **Select trading keypad mode** applies your chosen keypad lighting scheme to the LSEG FX trading keypad.

11. In the **Logs** panel, you can modify the default path for log files, changing from the folder path chosen during installation. You can choose the depth of logging required. You can also activate the web logger to troubleshoot networking issues.

---

37 Currently, this capability is for Workspace running on Windows only and will not affect the process priority of Workspace on macOS or the add-in running under Microsoft Office.

38 This can also be achieved by using the command line parameter `--run-above-normal-priority`. For more information, see Workspace executable statements.

39 You are unable to switch between Eikon 4.0 and Workspace where there was a Citrix installation of Workspace. In Citrix we do not support multiple applications to be installed concurrently (Jira ref: EFO-9593).
12. In the **Cache** panel, you can define a new folder location for cache files, changing from the folder path chosen during installation. You can also choose to clear all cache folders or only those folders of Electron or your Workspace apps.

13. Finally, in the **Tools** panel, use the Eikon 4 configuration converter tool to convert an existing Eikon configuration file to Workspace-compatible `.json` format. For further information, see the section below.

### Converting and modifying an Eikon configuration file

For test purposes, in the **Tools** panel of the Configuration Manager, you can use the **Eikon 4 configuration converter** to convert an existing `OverrideConfiguration.xml` file to `.json` format.

To convert and modify an existing file:
1. Click Eikon 4 Configuration Converter.
2. Select your saved `.xml` file. For example: `\myserver\config\refinitiv\OverrideConfiguration.xml`
3. Click **Open**.
   The file is converted, and the converted configuration file is then displayed.
4. Click **OK**.
5. [Optional] Change your Network and SSO configuration.
6. Check that the Streaming settings are correct and make any necessary changes.
7. Click **Export** to create a new file with a `.json` extension.

**Warning:** The converted `.json` file still contains legacy configuration settings from Eikon, which could potentially raise issues.

### Creating a new configuration file manually

To create a clean Workspace configuration file:
1. Delete your currently loaded configuration file.
2. Copy specific parameters from the Eikon Configuration Manager to the Workspace Configuration Manager.

Parameters in the Eikon Configuration Manager largely share the same names as their counterparts in Workspace. However, the following table lists the exceptions (parameter name and location):

<table>
<thead>
<tr>
<th>Eikon</th>
<th>Workspace</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Distributors</strong></td>
<td><strong>Hostname or IP</strong></td>
</tr>
<tr>
<td>Configuration: Customer Managed (Local Configuration Files) &gt; Real-Time tab &gt; ADS Connection – RSSL protocol</td>
<td>Streaming &gt; Servers</td>
</tr>
<tr>
<td><strong>User Name</strong></td>
<td><strong>Username</strong></td>
</tr>
<tr>
<td>Configuration: Customer Managed (Local Configuration Files) &gt; Permissions tab &gt; DACS Identification</td>
<td>Streaming &gt; DACS</td>
</tr>
</tbody>
</table>

For more complex environments and further support, contact Workspace technical support, who can assist in converting the content of the OverrideConfiguration.xml and RFA.RFA-configuration-files.

**Configuring Single Sign On (SSO) for Workspace web access**

Required configuration for when LSEG is the Service Provider (SP):

- Embed the Workspace Web access URL within the Identity Provider (IDP) initiated login URL. This redirects to Workspace after a successful login.

  For example:
  
  https:\id-abc.com\abc-sso\eikonweb?RelayState=https:\workspace.refinitiv.com\web

  The appropriate attribute name must be used, as indicated by the IDP software, for example, RelayState or TargetResource.
Appendix A: Folders and files

In this section
- Packages
- Server software
- Executable files
- Digital signatures
- Registry files
- Configuration file settings
- Shortcuts
- Default folder structures
- Proxies

Packages

This document can be used by IT to create an installation package and provide documentation for future updates to the application.

Download locations

You can download the latest version of the installation file, `RefinitivWorkspace-installer_x.xx.xx.exe`, from the locations listed in the table below.

<table>
<thead>
<tr>
<th>Location</th>
<th>Link</th>
</tr>
</thead>
<tbody>
<tr>
<td>Private network</td>
<td><a href="https://workspace.extranet.refinitiv.biz">https://workspace.extranet.refinitiv.biz</a></td>
</tr>
</tbody>
</table>

Executable file sizes

The installer executable size is operating system dependent:

<table>
<thead>
<tr>
<th>Operating System</th>
<th>Size (Megabits)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Microsoft Windows</td>
<td>~100</td>
</tr>
<tr>
<td>Apple macOS</td>
<td>~200</td>
</tr>
</tbody>
</table>

Server software

**Important:** DACS Permission Synchronization for Workspace is recommended – rather than the Deployed Permissions Reconciliation Manager (DPRM) service - to prevent misconfiguration or permission issues between the Delivery Platform (formerly RDP) and local LSEG Real-Time Distribution System (formerly TREP).

While we recommend DACS, for information regarding the configuration of the DPRM service, refer to Appendix E: Settings.
Versions

The following table lists the LSEG Real-Time Distribution System (formerly TREP) server software version requirements:

<table>
<thead>
<tr>
<th>Server software</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>LSEG Real-Time Advanced Distribution Server (formerly ADS)</td>
<td>3.6 or higher</td>
</tr>
<tr>
<td>LSEG Real-Time Data Access Control System</td>
<td>7.2 or higher</td>
</tr>
</tbody>
</table>

Creating an internal connection

To create a connection to the LSEG Real-Time Distribution System, you must download the Data Dictionary from a LSEG Real-Time Connector (RTC) or LSEG Real-Time Advanced Distribution Server (formerly ADS).

However, to do so, you must do either of the following:

- Set \*maxOutputBuffers in the LSEG Real-Time Distribution System to 5000, or
- Use the following multi-part dictionary setting\(^42\) to enable the download to be performed:
  \*<XYZ>*enableMultipartDictionary : True

Configuring multiple servers

Up to eight additional LSEG Real-Time Advanced Distribution Servers can be added to a custom configuration. This is done by using the Streaming > Servers panel of the Configuration Manager or by using the following statement:

```
EIKON.STREAMING.API.LOCAL.ADDITIONAL.SESSIONS.<n>
```

Where \(<n>\) is a number between 1 and 8.

For example:

```java
/*
Each server can have more than one URL, where each subsequent URL acts as a failover for the specific server
*/
// Main server
//
"EIKON.STREAMING.API.LOCAL.SESSIONS":
"["ws://ads01:15000/WebSocket","ws://ads02:15000/WebSocket","ws://ads02:15001/WebSocket"]",
//
// Additional server
//
"EIKON.STREAMING.API.LOCAL.ADDITIONAL.SESSIONS.1":
"["ws://example01:15000/WebSocket","ws://example02:15000/WebSocket","ws://example03:15001/WebSocket"]"
```

**Important**: Additional servers work only if the main server connects successfully.

\(^{40}\) For the rwf+wss protocols, the required version of Real-Time Advanced Distribution Server is 3.7.

\(^{41}\) The specified version requirement is for DACS Permission Synchronization only.

\(^{42}\) No change to the maxOutputBuffers parameter is required.
Appendix A: Folders and files

Executable files

The core installation of Workspace has the following executables:

<table>
<thead>
<tr>
<th>Process Name</th>
<th>Service</th>
</tr>
</thead>
<tbody>
<tr>
<td>RefinitivWorkspace.exe</td>
<td>LSEG Workspace (the main Workspace process)</td>
</tr>
<tr>
<td>Refinitiv-host.exe</td>
<td>Session Sharing Chrome Extension</td>
</tr>
<tr>
<td>RwupdaterService.exe</td>
<td>Software update installation service</td>
</tr>
<tr>
<td>Setup.exe</td>
<td>Called by the main processes to perform various sub-processes</td>
</tr>
</tbody>
</table>

Workspace uses .zip for updates. This may change in future releases, when smaller (delta) installation packages are introduced.

Digital signatures

The executable (.exe) and dynamic link library (.dll) files are digitally signed.

From Workspace version 1.24, these files will be signed using new digital certificates. This code signing certificate retains the same Issuer value but has different Subject and Thumbprint values. The new certificates do not impact builds of Workspace released prior to version 1.24.

For further information, refer to PCN208112 - LSEG Workspace 1.24 - New digital certificate.

Digital certificates for Workspace 1.24 or higher

**LSEG signature**

| Publisher | London Stock Exchange Group PLC |
| Subject   | C=GB/S=London, City of/O=London Stock Exchange Group plc/CN=London Stock Exchange Group plc |
| Issuer    | C=GB/O=Sectigo Limited/CN=Sectigo Public Code Signing CA R36 |
| Thumbprint| 5E56E4978E9D9F19C1298C55E1E8373DFAF44A6F |
| Expiration| Friday, April 24, 2026, 11:59:59 PM |

Configuration file settings

The following settings are customizable in your .json configuration file.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Customization</th>
</tr>
</thead>
</table>
| EIKON.STREAMING.API.LOCAL.ALLOWHOSTEDFALLBACK | Defining this setting as false, indicates that you do not want Workspace to fall back to the Common Platform hosted streaming servers. In this case, if the connection to all configured local server URLs fails, Workspace is unable to retrieve streaming data.
|                  | By default, Workspace systematically attempts to connect to the Common Platform hosted streaming servers, if no local connection can be made. |
| EIKON.STREAMING.API.LOCAL.DACS.APPLICATIONID | This setting allows you to customize the DACS application ID, for Workspace it is 56 by default. |
| CLIENTSSO_URL . ENABLED CLIENTSSO_URL | Support Client SSO service to allow the user to use company credentials to login. |

---

With auto-update per user
Proxies

Qualified Proxy

Workspace is qualified with the following authenticated proxy:

<table>
<thead>
<tr>
<th>Proxy</th>
<th>Authentication Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Squid 2.7</td>
<td>- No authentication</td>
</tr>
<tr>
<td></td>
<td>- Basic</td>
</tr>
<tr>
<td></td>
<td>- Digest</td>
</tr>
<tr>
<td></td>
<td>- NTLM</td>
</tr>
<tr>
<td></td>
<td>- Kerberos</td>
</tr>
<tr>
<td>Squid 3.5.28</td>
<td>- Basic</td>
</tr>
<tr>
<td></td>
<td>- Digest</td>
</tr>
</tbody>
</table>

HTTP/1.1 (or above) Compliant Proxy

Workspace requires HTTP/1.1. Workspace can attempt to use HTTP/2 but falls back to HTTP 1.1 if it is not viable.
It is vital that you use an HTTP/1.1+ Compliant Proxy to have the best connection between the Workspace key station and the LSEG Platform on the head end.

**Important:** The Streaming Service requires a *keep alive or persistent* connection, which is supported in the HTTP/1.1 specification.
Appendix B: Software information and support

In this section

- Documentation locations
- Export control classification
- Hosted connection item limits
- About LSEG Workspace dialog
- Data dictionary support
- Local mode support

Documentation locations

Workspace technical content can generally be found in two locations:

- The documentation section of the LSEG Workspace page. These documents are searchable using all popular search engines (such as Google or Bing).
- Under the Workspace section of MyAccount (formerly MyRefinitiv), the authenticated website.

Where documents are to be found in other locations, these are provided in the table below:

<table>
<thead>
<tr>
<th>Documentation</th>
<th>Location(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Workspace Administration Panel Configuration</td>
<td>A description of the functions of the Workspace Administration Panel can be found in the Configuration Guide.</td>
</tr>
<tr>
<td>Workspace System Requirements</td>
<td>The system requirements documentation can be found in the System Requirements document.</td>
</tr>
<tr>
<td>LSEG Real-Time Data Access Control System (formerly DACS)</td>
<td>The DACS permission synchronization requirements can be found in the DACS Permission Synchronization Configuration Guide, under the DACS section of the authenticated website.</td>
</tr>
<tr>
<td>LSEG Real-Time Advanced Distribution Server (formerly ADS)</td>
<td>An overview of the ADS WebSocket connection configuration can be found in the Advanced Distribution Server (ADS) section of the authenticated website.</td>
</tr>
<tr>
<td>LSEG Real-Time Advanced Distribution Hub (formerly ADH)</td>
<td>Content covering the installation and configuration of the LSEG Real-Time Advanced Distribution Hub can be found in the Advanced Distribution Hub section of the authenticated website.</td>
</tr>
<tr>
<td>Financial Community Network (FCN) and Delivery Direct</td>
<td>For further information about FCN and Delivery Direct, see the Private Network Overview section of the authenticated website.</td>
</tr>
<tr>
<td>Chrome Extension</td>
<td>For further information about the Google Chrome extension, see the Chrome Extension Installation Guide.</td>
</tr>
<tr>
<td>Release Notes</td>
<td>A summary of the features in the latest release of Workspace can be found in the Release Notes document.</td>
</tr>
<tr>
<td>Service Description</td>
<td>The Workspace Service Description document can be found in the Service Description document.</td>
</tr>
<tr>
<td>Workspace Vendor Subservice Definitions</td>
<td>A list of the Products, Exchanges, and Specialist Data definitions can be found in the Vendor subservice definitions document. These are managed using the LSEG Real-Time Data Access Control System (DACS).</td>
</tr>
<tr>
<td>Technical Roadmap</td>
<td>A tabular summary of known significant changes to upcoming releases of Workspace can be found in the Technical roadmap document.</td>
</tr>
</tbody>
</table>

47 DACS Permission Synchronization for Workspace is recommended – rather than the DPRM service, to prevent misconfiguration or permission issues between the Delivery Platform (formerly RDP) and local LSEG Real-Time Distribution System (formerly TREP). While we recommend DACS, for information regarding the configuration of the DPRM service, refer to Appendix E: Settings.
Export control classification

The following table contains export control classification details for Workspace:

<table>
<thead>
<tr>
<th>Program Name</th>
<th>Refinitiv Workspace</th>
</tr>
</thead>
<tbody>
<tr>
<td>ICOS Reference</td>
<td>6420</td>
</tr>
<tr>
<td>Program Version</td>
<td>1.x</td>
</tr>
<tr>
<td>Sub-Products</td>
<td>6413 for Windows &amp; 6414 for macOS</td>
</tr>
</tbody>
</table>

| ECCN (United States) | EAR99 |
| ECCN (European Union) | None |
| Refinitiv Export Code | NL |
| Export Note | This export code means ‘Not Licensable’ and is applied to items that can be exported ‘no license required’, under both EU and US regulations. Exports of NL items can be made to all countries except embargoed countries (Iran, Syria, North Korea, Cuba, or Crimea). |
| US Commerce, BIS CCATS number | self-classified |

Hosted connection item limits

For the deployed desktop hosted connection, the Item limit is 2500. This can be extended to 5000, with a fee-liable Product Line Item (PLI) add-on.

Once the limit is reached, a message is displayed in the About LSEG Workspace > Streaming panel.

About LSEG Workspace dialog

The About LSEG Workspace dialog box provides information about the viewed Workspace installation and environment.

To open the About LSEG Workspace dialog, In Workspace:

- Click Help > About Refinitiv Workspace

The dialog box divides information over five panels:

- System Status contains Workspace version and variant information, together with service connection details and an overview of the computer on which this iteration of Workspace is running.
- **Streaming** contains information about real-time data sources, including the primary feed used, RICs used (subscriptions), and any other feeds provided through a local LSEG Real-Time Distribution System.

- **User Details** contains information about the currently logged in user, including their email address, their user unique identifier (UUID), job role, and location information.

- Along with the proxy URL and version, the **Data API Proxy** panel also contains information about the status of the proxy, indicating whether it is available for external connections.

- **Services & Apps** contains version information about services and apps that have been made available to the user.

### Data dictionary support

Access to a Data Dictionary is only supported from a LSEG Real-Time Advanced Distribution Server (formerly ADS).

### Local mode support

The Local Mode feature, as found in Eikon, is not supported.

---

48 See the [Hosted connection item limits](#) section.
Appendix C: Command line statements

In this section
- Installation statements
- Uninstallation statements
- Configuration Manager parameters
- Workspace executable statements

Installation statements
The table below list command line statements that can be used to install Workspace:

<table>
<thead>
<tr>
<th>Installation mode</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>User</td>
<td>RefinitivWorkspace-installer_x.xx.xx.exe --user</td>
</tr>
<tr>
<td>Machine</td>
<td>RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate-peruser</td>
</tr>
<tr>
<td>Machine without Auto-Update</td>
<td>RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate-no</td>
</tr>
<tr>
<td>Machine with Update Service</td>
<td>RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate-service</td>
</tr>
<tr>
<td>SSO</td>
<td>RefinitivWorkspace-installer_x.xx.xx.exe --client-sso=&lt;client SSO URL&gt;</td>
</tr>
<tr>
<td>Installation help page</td>
<td>RefinitivWorkspace-installer_x.xx.xx.exe --help</td>
</tr>
<tr>
<td>Run Messenger only</td>
<td>RefinitivWorkspace-installer_x.xx.xx.exe --messengeronly</td>
</tr>
<tr>
<td>Shared configuration</td>
<td>--sharedconfig=&quot;&lt;file path&gt;&quot;</td>
</tr>
<tr>
<td></td>
<td>--sharedconfig=&quot;&lt;file path-1&gt;&quot;;&quot;&lt;file path-2&gt;&quot;;&quot;&lt;file path-3&gt;&quot;</td>
</tr>
</tbody>
</table>

Uninstallation statement
The table below list command line statements that can be used to uninstall Workspace:

<table>
<thead>
<tr>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>RefinitivWorkspace.exe --uninstall</td>
</tr>
</tbody>
</table>

Configuration Manager parameters
The table below list command line statements that can be used to configure Workspace:

<table>
<thead>
<tr>
<th>Installation mode</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>User</td>
<td>&quot;&lt;InstallDir&gt;\Refinitiv Workspace\RefinitivWorkspace.exe&quot; --config-manager</td>
</tr>
<tr>
<td>Machine or Hot-Desking</td>
<td>&quot;&lt;InstallDir&gt;\Refinitiv Workspace\RefinitivWorkspace.exe&quot; --config-manager --machine</td>
</tr>
</tbody>
</table>

49 This is the default method of installing Workspace. As such, the --user parameter is not a requirement.
50 For example, RefinitivWorkspace-installer_x.xx.xx.exe --machine-autoupdate-peruser -- sharedconfig="<file paths>" is the command line for a machine installation with a shared configuration.
51 The content of the file(s), identified by the --sharedconfig parameter, could change from version-to-version. So, refer to the appropriate documentation for amendments to this parameter when there is a new release.
Workspace executable statements

There are various parameters you can add to the Workspace executable, located in the %ProgramFiles%\Refinitiv\Refinitiv Workspace\<version>\ folder.

The command line structure is:

RefinitivWorkspace.exe <Parameter>

For example:

RefinitivWorkspace.exe --connection=internet

The following parameters are available:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>--clearCache</td>
<td>Clear the Electron cache of Workspace</td>
</tr>
<tr>
<td>--clearLogs</td>
<td>Clear the logs folder of Workspace</td>
</tr>
<tr>
<td>--clearRememberMe</td>
<td>Delete the automatic login cookie</td>
</tr>
<tr>
<td>--client-sso=&lt;url&gt;</td>
<td>Set the URL for your SSO</td>
</tr>
<tr>
<td>--dumpApps</td>
<td>Dump available Apps of Workspace into the logs folder</td>
</tr>
<tr>
<td>--dumpConfig</td>
<td>Dump the configuration of Workspace into the logs folder</td>
</tr>
<tr>
<td>--excel</td>
<td>Start Excel with the Workspace ribbon add-in</td>
</tr>
<tr>
<td>--log-level=&lt;level&gt;</td>
<td>Set the level of detail for log files, where &lt;level&gt; is:</td>
</tr>
<tr>
<td></td>
<td>- error</td>
</tr>
<tr>
<td></td>
<td>- warning</td>
</tr>
<tr>
<td></td>
<td>- information</td>
</tr>
<tr>
<td></td>
<td>- verbose</td>
</tr>
<tr>
<td></td>
<td>- debug</td>
</tr>
<tr>
<td>--resetCache</td>
<td>Reset the product cache of Workspace to its default state</td>
</tr>
<tr>
<td>--systemtest</td>
<td>Run the embedded System Test 52</td>
</tr>
<tr>
<td>--uninstall</td>
<td>Uninstall Workspace</td>
</tr>
<tr>
<td>--update-office-registry=&lt;value&gt;</td>
<td>Used to update the office registry key, where &lt;value&gt; is either HKLM or HKCU. For further information, see Excel add-in loading issues.</td>
</tr>
<tr>
<td>--upload-logs</td>
<td>Upload log files</td>
</tr>
<tr>
<td>--version</td>
<td>Show the version of Workspace 53</td>
</tr>
<tr>
<td>--versions</td>
<td>Display the version of underlying components of Workspace, for example:</td>
</tr>
<tr>
<td></td>
<td>--versions=electron, node (or simply --versions)</td>
</tr>
<tr>
<td>--nofile</td>
<td>Start system tray icon only</td>
</tr>
</tbody>
</table>

Installer command line statements

Currently, only the following command line statement is available, which enables Workspace to run at a higher processing priority:

RefinitivWorkspace-installer_x.xx.xx.exe --run-above-normal-priority

---

52 For further information regarding the System Test applications, refer to the Workspace System Test Guide.

53 On macOS, for this command to work as intended, go to the /Applications/Refinitiv Workspace.app/Contents/MacOS folder and run the command, ./RefinitivWorkspace --args --version.
Appendix D: Automatic update workflow

The content in this appendix applies to the following installation types:

- --user
- --machine-autoupdate-peruser\(^{54}\)
- --machine-autoupdate-service

The --machine-autoupdate-no installation mode is not discussed, as automatic update functionality is disabled for that mode.

Device and installation registration

1. Login into Workspace
2. During the first minute after login, RefinitivWorkspace.exe retrieves installationGUID from installinfo.json.
   - If installationGUID is not found in installinfo.json, it is created using guid.json\(^{55}\)
   - If installinfo.json does not exist, it is created automatically
   - Depending on the installation method, installinfo.json is in one of the following locations:

<table>
<thead>
<tr>
<th>Method</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>User</td>
<td>C:\Users%Username%\AppData\Roaming\Refinitiv\Refinitiv Workspace\</td>
</tr>
<tr>
<td>Machine with auto update per user</td>
<td>&lt;install path&gt;\Refinitiv\Refinitiv Workspace\</td>
</tr>
<tr>
<td>Machine with auto update service</td>
<td>%programdata%\Refinitiv\Refinitiv Workspace\</td>
</tr>
</tbody>
</table>

3. RefinitivWorkspace.exe sends a request to Desktop Deployment Portal to do the following:
   a. Check whether the device is registered on Desktop Deployment Portal and, if not, add the new device
   b. Add a login history record

Checking new version availability

Randomly, between 5-60 minutes after login, RefinitivWorkspace.exe checks\(^{56}\) the availability of the new target version for the current user. Version checks are then scheduled daily, at 00: <randomMinutes>.

4. Checks the new version with Admin Panel\(^{57}\)
5. Checks the new version with Desktop Deployment Portal

\(^{54}\) For --machine-autoupdate-peruser mode only: To update the master installation automatically (bulk autoupdate), the administrator should get the latest version and reinstall Workspace. All users, that have a lower version than the master installation, are updated to the new version of master installation automatically, with the active setup, once they log off from Windows, and log in again.

\(^{55}\) Guid.json is located under C:\Users\%Username%\AppData\Roaming\Refinitiv\Refinitiv Workspace\.

\(^{56}\) This check can also be triggered by opening the About Box.

\(^{57}\) For further information, see the Administration Panel Configuration Guide.
Changing the update time

To change update time after login, use the command --checkupdateTime=<n>, where:
- --checkupdateTime=0 – Checks for a new version instantly after login
- No parameter set – Checks for a new version randomly between 5-60 minutes after login

Setting up a custom scheduler

To set up a custom scheduler to check for new versions, use the command:
--autocheckupdatetime=<a> <b> <c> <d> <e>

Where:
- <a> Day of week (0 – 7, where 7 is Sunday). You can also use names, that is, Monday, and so on.
- <b> Month (1 - 12)
- <c> Day of month (1 - 31)
- <d> Hour (0 - 23)
- <e> Minute (0 - 59)

For example, for an update check to be performed every Sunday, at 5:30 PM, use the command:
--autocheckupdatetime=7 * * 17 30

If a new version is detected see the next steps.

Downloading a version and preparing for upgrade

1. Workspace receives the target version information (including URL) and automatically downloads the zipped package.

<table>
<thead>
<tr>
<th>Calling process</th>
<th>RefinitivWorkspace.exe</th>
</tr>
</thead>
<tbody>
<tr>
<td>URL</td>
<td><a href="https://cdn.refinitiv.net/public/packages/RFVWindows/RFVWindows_Core">https://cdn.refinitiv.net/public/packages/RFVWindows/RFVWindows_Core</a>_&lt;x&gt;_xx_xx.zip</td>
</tr>
<tr>
<td>Installation type</td>
<td>Download location</td>
</tr>
<tr>
<td>--user</td>
<td>%AppData\Local\Refinitiv\Refinitiv Workspace.ToInstall</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>%ProgramData\Refinitiv\Refinitiv Workspace\Refinitiv Workspace.ToInstall</td>
</tr>
</tbody>
</table>

2. Workspace extracts the files from the zipped file to a newly created Extract folder

<table>
<thead>
<tr>
<th>Calling process</th>
<th>RefinitivWorkspace.exe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unzip tool</td>
<td>yauzl node_module 5a</td>
</tr>
<tr>
<td>Extract location</td>
<td>&lt;Download location&gt;\Extract</td>
</tr>
</tbody>
</table>

58 https://www.npmjs.com/package/yauzl
Checking new package with Desktop Deployment Portal

1. Checks whether the content in the Extract\checkUpdateInfo.json matches the content received from the Desktop Deployment Portal (by checking the file hash code):

<table>
<thead>
<tr>
<th>If...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Skip downloading the new package and wait for the upgrade initiation</td>
</tr>
<tr>
<td>No</td>
<td>Delete the downloaded package and Extract folder</td>
</tr>
</tbody>
</table>

2. Download the new package, with the updated Extract\CheckUpdateInfo.json content (see Downloading a version and preparing for upgrade)

Initiating an update

1. The persons required to perform this step depend on the installation type:

<table>
<thead>
<tr>
<th>Installation type</th>
<th>Performed by</th>
</tr>
</thead>
<tbody>
<tr>
<td>--user</td>
<td>The user of the machine where Workspace was installed</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>Each Workspace user on the machine where the application was installed</td>
</tr>
<tr>
<td>--machine-autoupdate-service</td>
<td>Any user of the machine(s) where Workspace was installed</td>
</tr>
</tbody>
</table>

- To begin the upgrade, do one of the following:
  - Select the Help menu, choose About Refinitiv Workspace, and click the Upgrade now button.
  - Select the Refinitiv Workspace menu and choose:
    - Sign Out, or
    - Exit Refinitiv Workspace

2. RefinitivWorkspace.exe runs an Extract\setup.exe command, with arguments based on setupArgs, defined in CheckUpdateInfo.json.

<table>
<thead>
<tr>
<th>Installation type</th>
<th>Example command</th>
</tr>
</thead>
<tbody>
<tr>
<td>--user</td>
<td>setup.exe --update --rerun --silent --forceInstall --calledByCheckupdate --execute=RefinitivWorkspace.exe --application=C:\Users\%Username%\AppData\Local\Refinitiv\Refinitiv Workspace.exe \Local\Refinitiv\Refinitiv Workspace.exe --appLocation=C:\Program Files\Refinitiv\Refinitiv Workspace\1.19.447</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>setup.exe --update --rerun --silent --forceInstall --calledByCheckupdate --execute=RefinitivWorkspace.exe --appLocation=C:\Program Files\Refinitiv\Refinitiv Workspace\1.19.447</td>
</tr>
<tr>
<td>--machine-autoupdate-service</td>
<td>setup.exe --update --rerun --silent --forceInstall --calledByCheckupdate --execute=RefinitivWorkspace.exe --appLocation=C:\Program Files\Refinitiv\Refinitiv Workspace\1.19.447</td>
</tr>
</tbody>
</table>

Upgrade workflow

The following actions are performed by Extract\Setup.exe:

1. Waits for several seconds until RefinitivWorkspace.exe is terminated

2. Performs a backup of installation folders, based on the information in the files section of InstallInfo.json

---

59 If RefinitivWorkspace.exe has not been terminated, Setup.exe force-kills the process. For --machine-autoupdate-service mode: Only the instigating user is required to terminate their Workspace session.
Appendix D: Automatic update workflow

a. **--machine-autoupdate-service** only: Checks whether Workspace is in use by another user:

<table>
<thead>
<tr>
<th>If...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Go to step 2.c.</td>
</tr>
<tr>
<td>No</td>
<td>Go to step 2.b.</td>
</tr>
</tbody>
</table>

b. Backs up the Workspace installation folder:

<table>
<thead>
<tr>
<th>Installation type</th>
<th>Installation folder</th>
<th>Backup location</th>
</tr>
</thead>
<tbody>
<tr>
<td>--user</td>
<td>Refinitiv Workspace</td>
<td>&lt;install_path&gt;\Refinitiv Workspace\Backup</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>Workspace &lt;Version&gt;</td>
<td>&lt;install_path&gt;\Refinitiv Workspace&lt;Version&gt;.Backup</td>
</tr>
<tr>
<td>--machine-autoupdate-service</td>
<td>Workspace &lt;Version&gt;</td>
<td>&lt;install_path&gt;\Refinitiv Workspace&lt;Version&gt;.Backup</td>
</tr>
</tbody>
</table>

c. **--machine-autoupdate-service** mode only: Checks whether Microsoft Office is in use by another user on the same machine:

<table>
<thead>
<tr>
<th>If...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Go to step 2.e.</td>
</tr>
<tr>
<td>No</td>
<td>Go to step 2.d.</td>
</tr>
</tbody>
</table>

d. Backs up the Refinitiv for Office installation folder:

<table>
<thead>
<tr>
<th>Installation type</th>
<th>Installation folder</th>
<th>Backup location</th>
</tr>
</thead>
<tbody>
<tr>
<td>--user</td>
<td>Refinitiv for Office</td>
<td>&lt;install_path&gt;\Refinitiv for Office\Backup</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>Office &lt;Version&gt;</td>
<td>&lt;install_path&gt;\Refinitiv for Office&lt;Version&gt;.Backup</td>
</tr>
<tr>
<td>--machine-autoupdate-service</td>
<td>Office &lt;Version&gt;</td>
<td>&lt;install_path&gt;\Refinitiv for Office&lt;Version&gt;.Backup</td>
</tr>
</tbody>
</table>

e. **--machine-autoupdate-service** mode only: Performs a backup of the Update Service installation folder:

<table>
<thead>
<tr>
<th>Installation type</th>
<th>Installation folder</th>
<th>Backup location</th>
</tr>
</thead>
<tbody>
<tr>
<td>--machine-autoupdate-service</td>
<td>Update Service &lt;Version&gt;</td>
<td>&lt;install_path&gt;\Refinitiv Workspace Update Service&lt;Version&gt;.Backup</td>
</tr>
</tbody>
</table>

3. Backs up the shortcuts folder, based on the information in the `shortcutsFolder` section of `InstallInfo.json`:

<table>
<thead>
<tr>
<th>Installation type</th>
<th>Backup location</th>
</tr>
</thead>
<tbody>
<tr>
<td>--user</td>
<td>%appdata%\Refinitiv\Refinitiv Workspace\Backup&lt;randomname&gt;\backupShortcut\</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>%appdata%\Refinitiv\Refinitiv Workspace\Backup&lt;randomname&gt;\backupShortcut\</td>
</tr>
<tr>
<td>--machine-autoupdate-service</td>
<td>%programdata%\Refinitiv\Refinitiv Workspace\Backup&lt;randomname&gt;\backupShortcut\</td>
</tr>
</tbody>
</table>

4. Creates new folders and installs files:

<table>
<thead>
<tr>
<th>Installation type</th>
<th>Workspace location</th>
<th>Office location</th>
<th>Update Service location</th>
</tr>
</thead>
<tbody>
<tr>
<td>--user</td>
<td>&lt;install_path&gt;\Refinitiv Workspace</td>
<td>&lt;install_path&gt;\Refinitiv for Office</td>
<td>n/a</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>&lt;install_path&gt;\Refinitiv Workspace</td>
<td>&lt;install_path&gt;\Refinitiv for Office</td>
<td>n/a</td>
</tr>
<tr>
<td>--machine-autoupdate-service</td>
<td>&lt;install_path&gt;\Refinitiv Workspace&lt;Version&gt;</td>
<td>&lt;install_path&gt;\Refinitiv for Office&lt;Version&gt;</td>
<td>&lt;install_path&gt;\Refinitiv Workspace Update Service&lt;Version&gt;</td>
</tr>
</tbody>
</table>

5. Installs shortcuts:

<table>
<thead>
<tr>
<th>Installation Type</th>
<th>File location</th>
</tr>
</thead>
<tbody>
<tr>
<td>--user</td>
<td>%AppData%\Microsoft\Windows\Start Menu\Programs\Refinitiv</td>
</tr>
<tr>
<td>--machine-autoupdate-peruser</td>
<td>%AppData%\Microsoft\Windows\Start Menu\Programs\Refinitiv</td>
</tr>
</tbody>
</table>
Appendix D: Automatic update workflow

**Installation Type** | **File location**
---|---
--user | `%ProgramData%\Microsoft\Windows\Start Menu\Programs\Refinitiv Workspace`
--machine-autoupdate-peruser | `%ProgramData%\Microsoft\Windows\Start Menu\Programs\Refinitiv Workspace`<version>
--machine-autoupdate-service | `%ProgramData%\Microsoft\Windows\Start Menu\Programs\Refinitiv Workspace`

6. Installs Add Remove Programs (ARP) registry entries for Workspace
7. Checks whether Workspace was installed with `--messengeronly` parameter:

<table>
<thead>
<tr>
<th>If...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Go to step 9</td>
</tr>
<tr>
<td>No</td>
<td>Go to step 8</td>
</tr>
</tbody>
</table>

8. Installs Office Registry and Office Add-ins
9. Creates `install-settings.json`, containing settings for Microsoft Office, providing the location for Workspace and Office add-ins:

**Installation Type** | **File location**
---|---
--user | `<install_path>\Refinitiv Workspace`
--machine-autoupdate-peruser | `<install_path>\Refinitiv Workspace`
--machine-autoupdate-service | `<install_path>\Refinitiv Workspace\<version>`

10. Creates `com.refinitiv.workspace.sessionsharing.json`, providing Chrome extension settings and the location of the `Refinitiv-host.exe` file:

**Installation Type** | **File location**
---|---
--user | `<install_path>\Refinitiv Workspace`
--machine-autoupdate-peruser | `<install_path>\Refinitiv Workspace`
--machine-autoupdate-service | `<install_path>\Refinitiv Workspace\<version>`

11. Checks whether the installation was completed successfully:

<table>
<thead>
<tr>
<th>If...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Removes backup folders&lt;sup&gt;60&lt;/sup&gt;</td>
</tr>
<tr>
<td>No</td>
<td>Removes all newly installed files and restores backup folders. Ends the installation with an error message.</td>
</tr>
</tbody>
</table>

12. Creates `InstallInfo.json`, in a mode-specific location, and writes new installation information, such as installation paths, shortcut paths, and so on:

**Installation Type** | **File location**
---|---
--user | `<install_path>\Refinitiv Workspace`
--machine-autoupdate-peruser | `<install_path>\Refinitiv Workspace`
--machine-autoupdate-service | `<install_path>\Refinitiv Workspace\<version>`

13. If the update was triggered by signing out, it relaunches Workspace with `--startApp`

---
<sup>60</sup> For the `machine-autoupdate-service` only: If Workspace is in use at the time of update, the previous `<Version>` folders under Refinitiv Workspace and Refinitiv for Office are preserved. Once all users have logged out of their devices and logged in again, access to the new Workspace version is facilitated using Active Setup.
Appendix E: Settings

In this section

- Microsoft Office settings
- Security
- Enabling the DPRM service

Networking

Ports

Workspace uses the following connections:

<table>
<thead>
<tr>
<th>API 61</th>
<th>Connection</th>
<th>Port 62</th>
</tr>
</thead>
<tbody>
<tr>
<td>Desktop Data API</td>
<td>http:\localhost:9000\api\</td>
<td>9000</td>
</tr>
<tr>
<td>Side by Side API 63</td>
<td>http:\localhost:9000\sxs\</td>
<td>9000</td>
</tr>
<tr>
<td>Refinitiv Workspace Bus</td>
<td>http:\localhost:49152\</td>
<td>49152</td>
</tr>
</tbody>
</table>

Communication protocols

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Services

This section summarizes the services and features related to connectivity and provides links to further information.

---

61 You can find further information regarding APIs on the Developer Community website.

62 9000 and 49152 are internal ports. If the port is already in use, Workspace increments until a free port number is found:

- for Desktop Data and Side by Side, from 9000, and
- for Workspace Bus, from 49152

63 For further information, see Workspace Web Side by Side API on the Developer Community website.
Financial Community Network and Delivery Direct

To access new AWS service endpoints, customers using a private network must whitelist the following new IP addresses, which impact Delivery Direct, FCN, and CMC users:

- 159.43.192.0/23 (AMERS)
- 159.43.200.0/23 (EMEA)
- 159.43.208.0/23 (APAC)

For further information about Finance Community Network (FCN) and Delivery Direct, see the Private Network Overview section of MyAccount (formerly MyRefinitiv), containing the following documents:

- Customer Connectivity DNS Migration Guide
- FCN Customer Connectivity Guide

Internet

LSEG will not divulge IP address information under any circumstances. Doing so prevents us from changing IP addresses, as and when needed, without a notification period. These IP addresses may not always be under our direct control.

Transport Layer Security protocol

From 01 June 2023, to continue to use LSEG Real-Time services, you must ensure that use of TLS version 1.2 is enabled for all Workspace users.

To enable TLS 1.2:

1. In Windows, click Start
2. Open the Control Panel app and choose Network and Internet
3. In the Network and Internet panel, choose Internet Options
4. In the Internet Properties dialog, shown opposite, select the Advanced tab
5. Scroll to the Security section (at the end of the settings list) and select Use TLS 1.2

For further information, refer to PCN205244-Change in supported TLS protocols for Eikon and Workspace.

Web hosted services

The following services and features are accessed through the Internet and not reached through a private network:

- MyRefinitiv (my.refinitiv.com)
- Contact Us
- Desktop crash dump upload utility
- GetSupport or interactive Chat

The authenticated documentation repository.

For raising questions, issues, and other topics.

Sends data to the LSEG support platform. This is in case a user has a session crash. The crash data is sent from the user session to Refinitiv, so we can investigate the crash.

Where feedback / support issues are logged, and you can establish a chat dialogue with an agent.
### Content filtering domains

You need to whitelist the domains for content that can be accessed through Workspace.

**Important:** Third Party apps in Workspace may require access to specific domains. For information about specific access requirements, it is advisable to contact the app developer directly.

### Example domain list

The following list of domains is not exhaustive and is for illustrative purposes only.

- Many of the domains listed in the table below are wildcard values, where a subdomain may prepend and/or append the listed domain.

<table>
<thead>
<tr>
<th>DNS</th>
<th>Workspace services</th>
</tr>
</thead>
<tbody>
<tr>
<td>autex.com</td>
<td>Autex</td>
</tr>
<tr>
<td>autexnow.com</td>
<td></td>
</tr>
<tr>
<td>authenticator.pingone.com</td>
<td>Multi-factor Ping Authenticator app</td>
</tr>
<tr>
<td>idpxny13m.pingidentity.com</td>
<td></td>
</tr>
<tr>
<td>bit.ly</td>
<td>Bit.ly Integration Information</td>
</tr>
<tr>
<td>reut.rs</td>
<td></td>
</tr>
<tr>
<td>tmsnrt.rs</td>
<td></td>
</tr>
<tr>
<td>trmcs-documents.s3.amazonaws.com</td>

</tr>
<tr>
<td>refinitiv.biz</td>
<td></td>
</tr>
<tr>
<td>thomsonreuters.com</td>
<td></td>
</tr>
<tr>
<td>thomsonreuters.net</td>
<td></td>
</tr>
</tbody>
</table>

64 This is not the case when private line connectivity is enabled for Workspace Messenger. For further information, see Appendix E: Workspace Messenger standalone.
## Trusted root certification

You can download and verify the COMODO certificate from the appropriate location, defined in the table below:

<table>
<thead>
<tr>
<th>Internet</th>
<th>Private network</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="https://cipher-test.refinitiv.com">https://cipher-test.refinitiv.com</a></td>
<td><a href="https://cipher-test.extranet.refinitiv.biz">https://cipher-test.extranet.refinitiv.biz</a></td>
</tr>
</tbody>
</table>

### Certificate details:

<table>

<tr>
<th>Issued by</th>
<th>CN</th>
<th>O</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMODO</td>
<td>COMODO RSA Certification Authority</td>
<td>COMODO RSA Certification Authority</td>
<td>COMODO CA Limited</td>
</tr>
</tbody>
</table>
Microsoft Office settings

Workspace for Excel VSTO add-in

For the Microsoft Excel Visual Studio Tools for Office (VSTO) add-in, Workspace installs a single DLL file under the Windows operating system, refinitiv-shim.dll. This supports the core features of the Refinitiv Workspace - Excel (Workspace ribbon) add-in.

### MS Office File location

<table>
<thead>
<tr>
<th></th>
<th>File location</th>
</tr>
</thead>
<tbody>
<tr>
<td>32-bit</td>
<td>&lt;Install_path&gt;\Refinitiv\Refinitiv for Office\x.x.x\Office_x86</td>
</tr>
<tr>
<td>64-bit</td>
<td>&lt;Install_path&gt;\Refinitiv\Refinitiv for Office\x.x.x\Office_x64</td>
</tr>
</tbody>
</table>

There is no linking, presentation tools, or deal analytics package.

### Workspace add-in

The Refinitiv Workspace - Excel (Workspace ribbon) add-in changes are listed in the table below:

<table>
<thead>
<tr>
<th>Version</th>
<th>Add-ins</th>
</tr>
</thead>

</tbody>
</table>

See Contributions (RContribute) in the Appendix J: Known issues section.
Customer managed over Internet

Customer managed over Internet mode is a sub deployment, where Workspace connects the real time data on a user’s own local LSEG Real-Time Distribution System (formerly TREP) infrastructure, while other content is sourced from the Delivery Platform (formerly RDP), through the Internet.

To configure this:

1. In Workspace, open Configuration Manager.
2. In the Network panel, under Connection Type, select Internet.
3. In the Streaming panel, under Streaming Data Retrieval, select From a local LSEG Real-Time Advanced Distribution Server (ADS).
4. This opens three separate panels – Servers, Feeds, and DACS – where you can add your server and feed information.

Security

FIPS

Workspace is not supported in a 140 series Federal Information Processing Standards (FIPS) environment.

User Agent

A User Agent is an application that retrieves and presents Web content for users or is implemented using Web technologies.

Workspace identifies connections to the ADS User Agent. For example, this could contain the following string and version:

RFV-Workspace\<version>

Where the <version> is updated to match the Workspace executable version.

Enabling the DPRM service

**Important:** In Workspace 1.23, there is a known issue with the DPRM service that affects a small minority of installations. This has been fixed in Workspace 1.24.

For those Workspace desktop customers who want to use the optional DPRM service in their local LSEG Real-Time Distribution System, the settings in the following table can be added to the <override_settings>.json file.

<table>
<thead>
<tr>
<th>Version</th>
<th>Add-ins</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.8</td>
<td>=RHistory() =RtGet() =TR()</td>
</tr>
</tbody>
</table>
## Appendix E: Settings

### LSEG Workspace Installation and Configuration Guide

### Document Version 124.07

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
</table>
| EIKON.STREAMING.API.LOCAL.DACS.DPRM.PORT | This allows you to specify the port to use to retrieve the entitlements used for DPRM. In general, the port should be set to either of the following modes:
- 8261 - Permission proxy mode, or
- 8302 - Permission service mode. |
| EIKON.STREAMING.API.LOCAL.DACS.DPRM.INTERVAL | This allows you to set the interval, in milliseconds, between each reconciliation of DACS entitlements with the DPRM service. Default value: 86400000 (24 hours). |
| EIKON.STREAMING.API.LOCAL.DACS.DPRM.DELAY | This allows you to set the delay, in milliseconds, between Workspace initialization after login and the reconciliation of DACS entitlements with the DPRM service. Default value: 60000 (60 seconds). |
| EIKON.STREAMING.API.LOCAL.DACS.DPRM.SERVERS | This parameter is used when running permission service mode only. This allows you to specify a list of servers to use for DPRM and should be set for permission service mode only (port 8302). This setting is defined as a JSON-encoded array of permission service hostnames. For example:
```
["dacs01", "dacs02", "dacs03"]
```

### DPRM settings example

```
"EIKON.STREAMING.API.LOCAL.DACS.DPRM.PORT": "8261",
"EIKON.STREAMING.API.LOCAL.DACS.DPRM.INTERVAL": "43200000",
"EIKON.STREAMING.API.LOCAL.DACS.DPRM.DELAY": "50000",
"EIKON.STREAMING.API.LOCAL.DACS.DPRM.SERVERS":
["dacs01", "dacs02", "dacs03"]
```

**Important:** DACS Permission Synchronization for Workspace is recommended – rather than the DPRM service - to prevent misconfiguration or permission issues between the Delivery Platform (formerly RDP) and local LSEG Real-Time Distribution System (formerly TREP).

---

66 The `EIKON.STREAMING.API.LOCAL.DACS.DPRM.PORT` parameter is mandatory.

67 If not set to one of these values, DACS synchronization is not performed.

68 In permission proxy mode, the list of servers in the `EIKON.STREAMING.API.LOCAL.SESSIONS` setting is used.

69 If not set, the list of servers defined in the `EIKON.STREAMING.API.LOCAL.SESSIONS` setting is used.
Appendix F: Shared configuration

Configuration override order

The illustration below shows the override order for configuration settings\(^7\), where commands issued using the command line have the highest level of priority:

Creating a shared configuration file

Once you have made your settings using the Configuration Manager dialog, do the following:

1. click Export
2. Use the Save As dialog to define a file name and location

\(^7\) The Admin level shared configuration file is created using the Administration Panel tool. For further information, refer to the Administration Panel Configuration Guide.
## Settings

The following table contains a shared configuration file example, showing where the setting is found, and the selection or entry that was made in the example:

<table>
<thead>
<tr>
<th>Setting example</th>

<td></td>
</tr>
<tr>
<td>For additional servers that may be configured in the shared configuration file only,</td>
<td></td>
</tr>
<tr>
<td>see the Streaming protocols section.</td>
<td></td>
</tr>
</tbody>
</table>

---

71 Network or connected directly

72 Up to eight additional servers can be configured. For further information, refer to the Configuring multiple servers section.
### Setting example

<table>
<thead>
<tr>
<th>Configuration Manager &gt; Streaming &gt; DACS menu</th>
<th>Description/Source</th>
</tr>
</thead>
</table>
| "EIKON.STREAMING.API.LOCAL.DACS.USERNAME": "permit_all_exchanges" | Options:  
  - Username (defined as permit_all_exchanges) |
| "EIKON.STREAMING.API.LOCAL.DACS.POSITION": %USERDETAILS.LASTNAME%\%USERDETAILS.UUID | Position (defined as %USERDETAILS.LASTNAME%\%USERDETAILS.UUID) |

<table>
<thead>
<tr>
<th>Configuration Manager &gt; Streaming &gt; Feeds menu</th>
<th>Description/Source</th>
</tr>
</thead>
</table>
| "EIKON.STREAMING.API.LOCAL.DEFAULTSOURCE": "IDN_RDF_2" | Main Feed options:  
  - Feed Name (defined as IDN_RDF_2)  
  - Key Letter(s)  
  - Alias(es) |
| "EIKON.STREAMING.API.LOCAL.DESKTOP.ALIASES": \"\"Test Internal feed 1\"":\"\"INF_1\"\" | Other Local Feeds options:  
  - Feed Name (defined as Test Internal feed 1)  
  - Key Letter(s) (defined as INF_1) |
| "EIKON.STREAMING.API.LOCAL.DISABLEDCONTRIBUTIONS": \"\"ATS_GLOBAL_1\",\"NO_CONTRIB_ALLOWED\"\" | By default, contribution is allowed on all sources. This setting is used to list sources on your local LSEG Real-Time Advanced Distribution Server where contributions are not allowed. Any subsequent attempt to contribute data to one of the listed sources is then rejected. This setting should be defined to a JSON-encoded array, where each array entry is a real source name. For example: ["ATS_GLOBAL_1", "NO_CONTRIB_ALLOWED"] |

<table>
<thead>
<tr>
<th>Configuration Manager &gt; Other menu</th>
<th>Description/Source</th>
</tr>
</thead>
</table>
| "EIKONPROTOCOL.ISDEFAULTAPPLICATION": "true" | Select the app that is used to open LSEG links:  
  - LSEG Workspace  
  - Eikon 4 |

For further information on the creation of a shared configuration file, refer to the Configuring Workspace section.

### Streaming protocols

In Workspace 1.22, additional Refinitiv Wire Format protocols for LSEG Real-Time Advanced Distribution Server may be configured using Configuration Manager or, manually, in your shared configuration JSON file:

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Transport</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>rwf+ws:</td>
<td>WebSocket</td>
<td>rwf+ws:\ads01.example.com:15000\WebSocket</td>
</tr>
<tr>
<td>rwf+wss:</td>
<td>Secure WebSocket</td>
<td>rwf+wss:\ads01.example.com:443\WebSocket</td>
</tr>
</tbody>
</table>

For example:

```
["ws:\ads01.example.com:15000\WebSocket","rwf+wss:\ads02.example.com:443\WebSocket"]
```

### Protocol support

#### Customer managed

From Workspace 1.22 onwards, the new protocols are supported for use through your Local LSEG Real-Time Distribution System.

---

73 Workspace version 1.22 is the first release to support the new protocols.
Where:

<table>
<thead>
<tr>
<th>Version requirements</th>
<th>WebSocket API (JSON)</th>
<th>Refinitiv Wire Format (Binary)</th>
</tr>
</thead>
<tbody>
<tr>
<td>All versions of LSEG Real-Time Distribution System</td>
<td>●</td>
<td>●</td>
</tr>
<tr>
<td>LSEG Real-Time Distribution System version 3.7 (or higher)</td>
<td>●</td>
<td>●</td>
</tr>
</tbody>
</table>

LSEG managed

The two services that are managed by LSEG – Hosted Market Data System and LSEG Contributions Channel – use the `rwf+ws://` protocol.
Appendix G: Workspace Messenger

Standalone

Workspace Messenger private line connectivity

You can use Workspace Messenger to send and receive text messages, photos, and stock prices.

Once you have installed Workspace Messenger, if you require connectivity through a Private Line, do the following:

1. Navigate to the Refinitiv Workspace shortcut:
   a. Click Start
   b. Scroll to Refinitiv > Refinitiv Workspace
   c. Right-click Refinitiv Workspace and select More > Open file location
2. In File Explorer, right-click the Refinitiv Workspace shortcut and select Properties
3. Add the following parameters to the end of the Target field:
   - --messenger-url="https:\\collab.platform.refinitiv.biz\eikonmessenger"

Embedded

Running Messenger traffic through a private network

To allow Workspace Messenger to route traffic through a private delivery network, you need to request that Workspace is permissioned for Messenger Private Delivery, using the following values:

<table>
<thead>
<tr>
<th>Product code</th>
<th>Permission Object name</th>
</tr>
</thead>
<tbody>
<tr>
<td>100464</td>
<td>COLLRMPRIVATE</td>
</tr>
</tbody>
</table>
Appendix H: Unsupported packaging methods

Important: This section describes packaging methods that are neither recommended nor supported by LSEG.

Supported methods
LSEG supports the installation of Workspace, using the downloadable executable file:

- On an individual basis. See the Basic Installation Guide.
- Using a command line statement. See Installing Workspace, in this document.

Unsupported methods
Customers may choose to deploy Workspace using the methods summarized below. While we neither recommend nor, on an ongoing basis, support these approaches, the steps outlined below are understood to work.

Packaging support
Customers are entitled to a session of up to two hours of free packaging support, provided by one of our Technical Implementation Specialists (TIS). During this time, our specialist focuses on providing guidance and offers expert advice on packaging Workspace.

Packaging support beyond this session will be chargeable. Should you require further assistance from LSEG, contact your Implementation Relationship Manager (IRM).

Installing using an MSI installer
You may choose to use the MSI installer method in situations where you are blocked from downloading and/or installing executable files, due to:

- A policy that is enforced on your computer, for example, by an antivirus product, or
- Your corporate firewall preventing access through their network

To do this:
   This can be done using tools such as MSI Wrapper or Advanced Installer.
2. Open PowerShell\(^7\), with admin privileges, and navigate to the

---
\(^7\) Refer to the Packaging support section. LSEG does not maintain test environments for these methods.
\(^7\) For further information, refer to the online Microsoft PowerShell documentation.
folder containing the .msi file.

3. To install Workspace using the quiet install method, use the command:\(^\text{78}\):

```
Start-Process RefinitivWorkspace-installer_x.xx.xx.msi -ArgumentList "/quiet"
```

A system test is performed and LSEG Workspace is installed.

**Deploying using Microsoft Intune**

Using Microsoft Intune, you may be able to deploy Workspace to users in your organization.

**Pre-requisites**

The following are the pre-requisites for machines on which Microsoft Intune is used and applies to the machines to which Workspace is to be deployed. These requirements may not align with those of LSEG Workspace:\(^\text{77}\):

- Use Windows 10 version 1607 or later (Enterprise, Pro, or Education editions)\(^\text{78}\)
- Machines (or devices) to which Workspace is to be deployed must be
  - Enrolled in Intune, and
  - One of the following:\(^\text{79}\):
    - An Azure AD registered device
    - An Azure AD joined device
    - A hybrid Azure AD joined device
- The installation file size must not be greater than 8GB.

**Deployment overview**

The Workspace installer file, `RefinitivWorkspace-installer_x.xx.xx.exe`, must be converted to a file with an .intunewin extension. The tool used to do this can be found on the [Prepare Win32 app content for upload](#) page.

**Creating the temporary folders**

1. Download the Content Prep Tool zip file and extract the tool (`IntuneWinAppUtil.exe`).
2. In the Windows %temp% folder, create the following folders:
   - 1-LSEG_Workspace
   - 2-IntuneAppsLSEG_Workspace\(^\text{80}\)
   - 3-IntuneWinAppUtil
3. In the LSEG_Workspace folder, add the following files:
   - `RefinitivWorkspace-installer_x.xx.xx`
   - `install.cmd`

\(^\text{76}\) This command line instruction is used to install Workspace on one machine. For mass deployment, add the command to your deployment portal (Microsoft System Center Configuration Manager, for instance).

\(^\text{77}\) For further information, refer to the Workspace System Requirements.

\(^\text{78}\) This requirement applies to all machines that are to be managed by Intune.

\(^\text{79}\) For further information about Azure device categories, refer to the Concept section under Azure AD device identity documentation.

\(^\text{80}\) The 2-IntuneAppsLSEG_workspace folder acts as the repository for the converted installation file.
Sample install.cmd script:

```
START %temp%\1-LSEG_Workspace\RefinitivWorkspace-installer_x.xx.xxx.exe --user --silent --installpath="%localappdata%\Refinitiv\Refinitiv Workspace" --cachepath="%localappdata%\Refinitiv Workspace\cache path" --installerlogpath="%localappdata%\Refinitiv Workspace\installerlogpath" --logpath="%localappdata%\Refinitiv Workspace\logpath" --shortcuts="%localappdata%\Refinitiv Workspace\shortcuts"
```

Sample uninstall.cmd script:

```
START %temp%\1-LSEG_Workspace\RefinitivWorkspace-installer_1.22.303.exe --uninstall --silent
```

Running the conversion tool

Once the folders have been created, use the IntuneWinAppUtil.exe tool to create the Intune file.

1. Open the 3-IntuneWinAppUtil folder and double-click the IntuneWinAppUtil.exe tool.

2. At the Please specify the source folder prompt, type the path to the first temporary folder and press Enter.
   
   For example:
   ```
   C:\temp\1-LSEG_Workspace
   ```

3. At the Please specify the setup file prompt, type the name of the Workspace installation file and press Enter.
   
   For example:
   ```
   RefinitivWorkspace-installer-win32-x64_1.23.269.exe
   ```

4. At the Please specify the output folder prompt, type the path to the second temporary folder and press Enter.
   
   For example:
   ```
   C:\temp\2-IntuneAppsLSEG_Workspace
   ```

5. For the Do you want to specify catalog folder prompt, type N and press Enter.
   The conversion tool starts converting the installation file to .intunewin format.

Installing through Intune

Once the .intunewin file has been created in the 2-IntuneAppsLSEG_Workspace folder, follow the instructions in the Add, assign, and monitor a Win32 app in Microsoft Intune page.
Use the information in the following table as a reference when configuring Intune:

<table>
<thead>
<tr>
<th>Intune Name</th>
<th>Mode</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>Refinitiv Workspace - user mode</td>
<td>--user</td>
<td>RefinitivWorkspace-installer-win32-x64_1.19.448.exe --user --silent</td>
</tr>
<tr>
<td>Refinitiv Workspace - machine-autoupdate-service mode</td>
<td>--machine-autoupdate-service</td>
<td>RefinitivWorkspace-installer-win32-x64_1.19.448.exe --machine-autoupdate-service</td>
</tr>
<tr>
<td>Refinitiv Workspace - machine-autoupdate-no mode</td>
<td>--machine-autoupdate-no</td>
<td>RefinitivWorkspace-installer-win32-x64_1.19.448.exe --machine-autoupdate-no</td>
</tr>
</tbody>
</table>
Appendix I: Troubleshooting

In this section
- Microsoft Managed Desktop installation issue
- Crash information uploads
- JSON coding changes
- Error codes
- Logging
- Networking issues
- Using the Video Recorder tool
- Using the Logs Viewer

Microsoft Managed Desktop installation issue

Issue
Customers who are:
- Hosted on full Microsoft Managed Desktop (MMD) environments
- Installing or uninstalling Workspace 1.22 or higher, and
- Using a command line script

May encounter the following error message in their installation log file (under %Temp%):

```
Deployment] Cannot get pmInstallInfo.json
1000:0524/093420:000:ERROR:gpu_process_host.cc(962) GPU process launch failed: error_code=18
1000:0524/093420:954:ERROR:gpu_process_host.cc(962) GPU process launch failed: error_code=18
1000:0524/093420:958:ERROR:gpu_process_host.cc(962) GPU process launch failed: error_code=18
1000:0524/093420:962:ERROR:gpu_process_host.cc(962) GPU process launch failed: error_code=18
1000:0524/093421:041:ERROR:gpu_process_host.cc(962) GPU process launch failed: error_code=18
1000:0524/093421:067:ERROR:gpu_process_host.cc(962) GPU process launch failed: error_code=18
1000:0524/093421:121:ERROR:gpu_process_host.cc(962) GPU process launch failed: error_code=18
1000:0524/093421:179:ERROR:gpu_process_host.cc(962) GPU process launch failed: error_code=18
1000:0524/093421:223:ERROR:gpu_process_host.cc(962) GPU process launch failed: error_code=18
```

Cause
This error stems from the introduction of sandboxed processes\(^{81}\) in Electron version 20, as the AppLocker Software Restriction policies may prevent the installation of binary files with a SANDBOX flag.

Before starting a new installation or upgrade, the Workspace installer creates a spawn file under %temp%, which triggers version and hardware tests. During the hardware test, the GPU requirements of Workspace are checked.

At this juncture, the App Locker Software Restriction Policy:
- Flags the executable file, preventing the GPU check

\(^{81}\) For further information, see Process Sandboxing | Electron.
Appendix I: Troubleshooting

- Writes the GPU error message (above) to the Electron and Workspace installation logs, and
- Creates the four binary flags, listed under Solution, below.

Solution

By exempting the blocked files, listed below, from the AppLocker policy, Workspace can be installed successfully on MMD environments:
- Hash B949CF64DC938AC4D005CBE6B3725E9343E09E3F3E6B9C3465F3FE20F8FE3EE4
- Hash D66DCCC12F8F1D20C7FD7E2E00E49DD8A0939F26BB4E5B01A482050A72B058C
- FQBN PublisherName="O=REFINITIV US LLC, S=NEW YORK, C=US" ProductName="*" BinaryName="*"
- FQBN PublisherName="O=MICROSOFT CORPORATION, L=REDMOND, S=WASHINGTON, C=US" ProductName="MICROSOFT® WINDOWS® OPERATING SYSTEM" BinaryName="*"

However, should you experience issues with this approach, contact LSEG Support who will investigate the issue further. Support will require your installer logs and information related to the installation.

Crash information uploads

If a crash occurs, Workspace sends the dump file to the internal Support platform.

Whenever possible, Workspace also uploads session logs to provide more information to the support teams.

Crash and log files are sent to the following internal Support platform:
https://dst.platform.refinitiv.com/

JSON coding changes

The following additional, advanced syntax changes have been made to the coding of JSON files:
- Add single line comments, using // at the beginning of the line
- Multiple line comments, using /* text text text */
- Empty lines are permitted
- Indentation errors are skipped and do not cause interruptions
- The last line of the file is not required to end with a comma

Error codes

The following error codes may be reported during an installation failure:

<table>
<thead>
<tr>
<th>Error reported</th>
<th>Code</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>UNSUPPORT_PLATFORM</td>
<td>100</td>
<td>Unsupported Platform.</td>
</tr>
<tr>
<td>FAILED_TO_INSTALL</td>
<td>101</td>
<td>Failed to install Workspace.</td>
</tr>
</tbody>
</table>
## Appendix I: Troubleshooting

### Document Version 124.07

#### Error reported | Code | Summary
--- | --- | ---
FAILED_TO_COPY_FILES | 102 | Failed to copy files to %AppData%\Refinitiv.
CANNOT_GET_FOLDER_SIZE | 103 | Cannot get folder size for stamping to Add/Remove program.
FAILED_TO_INSTALL_ADD_REMOVE_PROGRAM | 104 | Failed to install Add/Remove program.
FAILED_TO_INSTALL_WINDOWS_REGISTRY | 105 | Failed to install Windows registry.
FAILED_TO_CONFIG_PRODUCT | 107 | Failed to create/update config product.
FAILED_PREREQUISITE_CHECK | 108 | Failed prerequisites check.
ALREADY_INSTALLED | 109 | Already installed
NO_INSTALLATION_FOUND | 110 | No installation found
FAILED_TO_UNINSTALL | 201 | Failed to uninstall
FAILED_TO_UNINSTALL_CANNOT_REMOVE | 202 | Failed during uninstall process. Cannot remove Refinitiv Workspace folder
UNSUPPORT_PLATFORM | 300 | Unsupported operating system.
INVALID_COMMAND_ARGUMENT | 301 | Invalid parameter used in installation command line.\(^{82}\)
INVALID_ARGUMENT_VALUE | 302 | Invalid parameter used in installation command line
CUSTOM_PATH_NOT_ALLOW | 303 | Make sure that the path(s) entered in parameter(s) are compatible with the chosen installation mode
ALREADY_INSTALL | 310 | Workspace is already installed
ALREADY_INSTALL_DIFFERENT_MODE | 311 | You cannot proceed with the installation, as Workspace is already installed with a different installation mode
OFFICE_REGISTRY_CLI_NOT_SUPPORT | 321 | You must update Workspace to version 1.21 or higher to use the --office-registry command
UPDATE_OFFICE_REGISTRY_CLI_NOT_SUPPORT | 322 | You must update Workspace to version 1.21 or higher to use the --update-office-registry command.
UPDATE_BLOCKED_BY_OFFICE_REGISTRY | 323 | Update is blocked because your office registry is set to HKCU. Reset using --update-office-registry=HKLM before performing the update again.
NOT_ALLOW_ROLLBACK_BY_OFFICE_REGISTRY | 324 | Rollback is blocked because your office registry is set to HKCU. Reset using --update-office-registry=HKLM before performing the update again.
SYSTEM_CHECK_FAILED | 350 | The installer was unable to run the system test successfully
SYSTEM_CHECK_UNKNOWN_RESULT | 353 | The installer was unable to run the system test successfully
NOT_ENOUGH_DISKSPACE | 351 | Insufficient disk space on which to install Workspace
NO_ADMIN_RIGHT | 352 | Workspace installation requires Administrator privileges
FILE_IS_LOCKED | 400 | Process stopped as Workspace file(s) in use
FILE_IS_MISSING | 401 | Workflow installation executable does not contain all required files
INSTALLER_FILE_CORRUPT | 451 | Workflow installation executable is corrupt
NO_INSTALLATION_FOUND | 500 | Workflow installation file was not found
MS_OFFICE_PROCESS_IS_RUNNING | 501 | Installation stopped as Microsoft Office applications are running
FAILED_TO_HANDLE_FILE | 801 | Unable to access Workflow installation files
FAILED_TO_CONFIG_PRODUCT | 802 | Unable to configure product\(^{83}\)
FAILED_TO_ADD_REMOVE_PROGRAM | 810 | Unable to update Add/Remove Programs
FAILED_TO_ADD_WINDOWS_REGISTRY | 811 | Unable to update Windows registry
UNKNOWN_ERROR | 999 | Unknown error

---

### Logging

#### Uploading Workspace logs

You can upload Workspace logs by using:

- A menu option
- Excel launcher

---

\(^{82}\) See [Workspace Help parameter options](#).

\(^{83}\) In this event, contact Support. You will also be asked to provide your installation log file.
Menu option
- From the Help menu, select Upload logs.

Excel launcher
If you are logged into Excel:
1. Press Shift+Ctrl+Space.
2. In the Search window, type /log.
3. Click Upload Logs.

Log upload workflow
By user request or if a crash occurs, Workspace sends the contents of the application logs folder to the internal Support platform:
https://dst.platform.refinitiv.com/

To save bandwidth, log uploads are sent in chunks of no more than 5Mb. Additionally, logs that have already been uploaded are not uploaded again.

You can also upload log files to the desktop support site using the following command line:
RefinitivWorkspace.exe --upload-logs
Log upload troubleshooting

For troubleshooting purposes, the settings\(^{84}\) shown in the table below can be written to the user-settings.json or machine-settings.json file:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>EIKON_LOGSUPLOAD.VERBOSEOUTPUT</td>
<td>set to true to have some output generated in the console.</td>
</tr>
<tr>
<td>EIKON_LOGSUPLOAD.DEACTIVATEENCRYPTION</td>
<td>set to true to send the logs without encryption.</td>
</tr>
<tr>
<td>EIKON_LOGSUPLOAD.WRITETEMPFILESONDISK</td>
<td>set to true to write the original and the encrypted zips in the %TEMP% folder.</td>
</tr>
<tr>
<td>EIKON_LOGSUPLOAD.TESTDECRIPTIONLOCALY</td>
<td>set to true to test that decryption works locally (useful with VERBOSEOUTPUT and/or WRITETEMPFILESONDISK).</td>
</tr>
</tbody>
</table>

Networking issues

After installing Workspace, you have the option of using the web logger command to troubleshoot networking issues. To do this:

− Use the command `RefinitivWorkspace.exe --web-logger`, or
− Activate it using the Web Logger checkbox under Configuration Manager > Logs:

To troubleshoot networking issues:

1. Launch Workspace with the `--web-logger` parameter, using the Command Prompt, or through the Configuration Manager.
2. Enter your credentials and login.
3. Navigate to the log folder location.
4. Open the most recently created desktop log file (`web-requests.log`)\(^{85}\). This file is created and available with all captured web calls from Workspace.

Resetting Electron application data

You can use the following parameters to delete application data – configuration files, caches, preferences, and settings – resetting Electron.

**Important:** Close all Workspace applications before running these commands.

To do this, depending on your requirements:

− Run `RefinitivWorkspace.exe` with a parameter, or
− Select a cache clearing function under Configuration Manager > Cache

Depending on the option chosen, resetting the cache has the following effect:

<table>
<thead>
<tr>
<th>Configuration Manager function</th>
<th>Parameter</th>
<th>Effect</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clear all cache</td>
<td>--resetCache</td>
<td>Resets the product cache of Workspace to its default state. That is, as it would be after a fresh installation.</td>
</tr>
<tr>
<td>Clear Electron cache</td>
<td>--resetElectronCache</td>
<td>Reset the Electron cache of Workspace to its default state</td>
</tr>
</tbody>
</table>

\(^{84}\) By default, all these settings are set to FALSE.

\(^{85}\) When Workspace shuts down, it generates both the `web-requests.log` file and a HAR-based topology log file.
Using the Video Recorder tool

The Video Recorder tool allows you to capture and save video footage of your entire desktop or a particular screen. This is particularly useful for capturing issues you are experiencing with your environment to provide additional information to Support.

You can start the tool from the Help menu or by using a parameter.

Starting the tool from the Help menu

To do this:
1. Open the Help menu by clicking the ? icon.
2. Select Video Recorder from the menu.

Starting the tool using a parameter

Run Workspace with the --video-recorder parameter. This can be done either by:
- adding the parameter to the application shortcut by editing its properties, or
- using the appropriate command line statement:
  - Windows "%LOCALAPPDATA%\Refinitiv Workspace\RefinitivWorkspace.exe" --video-recorder
  - macOS "/Applications/Refinitiv Workspace.app/Contents/MacOS/RefinitivWorkspace" --args --video-recorder

The following dialog is displayed:

Capturing a video

To capture a video, do the following:
1. Click Start.
2. In the dialog that is displayed, choose whether to capture video of your whole desktop or of a specific screen.
While the video is recording, a dialog is displayed which shows the current size of the video file, as it is recording.

3. Once you have captured the content you require, click **Stop**.

4. Then, in the main dialog, click **Save**.

5. Optionally, navigate to a different download folder.

6. Click **Save**.

7. Contact **Support**, who will guide you regarding the submission of this file.

**Using the Logs Viewer**

The Logs Viewer facility allows you to view a comprehensive and filterable list of log entries that were captured in the main and other files.

You can start the facility from the Help menu or by using a parameter.

**Opening the facility from the Help menu**

To do this:
1. Open the Help menu by clicking the ? icon.
2. Select **Logs Viewer** from the menu.

**Opening the facility using a parameter**

Run Workspace with the **--logs-viewer** parameter. This can be done either by:
- adding the parameter to the application shortcut by editing its properties, or
- using the appropriate command line statement:

Windows

```
"%LOCALAPPDATA%\Refinitiv\Refinitiv Workspace\RefinitivWorkspace.exe" --logs-viewer
```

macOS

```
"/Applications/Refinitiv Workspace.app/Contents/MacOS/RefinitivWorkspace" --args --logs-viewer
```

---

86 See the Logs Viewer parameters section.
Logs Viewer parameters

The table below lists valid parameters for the `--logs-viewer` command line statement:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>--logs-viewer</code></td>
<td>Select the main file, which is the log of the current Workspace session, in the current log folder</td>
</tr>
<tr>
<td><code>--logs-viewer=*</code></td>
<td>Select all files in the current log folder</td>
</tr>
<tr>
<td><code>--logs-viewer=&lt;prefix&gt;</code></td>
<td>Select the files in the log folder that have the defined &lt;prefix&gt;. Where &lt;prefix&gt; is one of the following:</td>
</tr>
<tr>
<td></td>
<td>-  main – Workspace desktop log</td>
</tr>
<tr>
<td></td>
<td>-  excel – Workspace for Excel log</td>
</tr>
<tr>
<td></td>
<td>-  renderer – Workspace window rendering log</td>
</tr>
<tr>
<td></td>
<td>-  node – Node.js log</td>
</tr>
<tr>
<td><code>--logs-viewer=&lt;file&gt;</code></td>
<td>Select the specified log file. For example: <code>--log-viewer=&quot;%LOCALAPPDATA%\Refinitiv\Refinitiv Workspace Logs\Desktop.20230104.151635.p8956\renderer-1-r6.20230104.p22728.log&quot;</code></td>
</tr>
<tr>
<td><code>--logs-viewer=&quot;&lt;folder path&gt;&quot;</code></td>
<td>Select the main log file from the specified &lt;folder&gt;. For example: <code>--log-viewer=&quot;%LOCALAPPDATA%\Refinitiv\Refinitiv Workspace Logs&quot;</code></td>
</tr>
<tr>
<td><code>--logs-viewer=&quot;&lt;folder path&gt;\*&quot;</code></td>
<td>Select all files from the specified &lt;folder&gt;. For example: <code>--log-viewer=&quot;%LOCALAPPDATA%\Refinitiv\Refinitiv Workspace Logs\*&quot;</code></td>
</tr>
<tr>
<td><code>--logs-viewer=&quot;&lt;folder path&gt;\&lt;prefix&gt;&quot;</code></td>
<td>Select files with the specified &lt;prefix&gt; from the specified &lt;folder&gt;. For example: <code>--log-viewer=&quot;%LOCALAPPDATA%\Refinitiv\Refinitiv Workspace Logs\renderer&quot;</code></td>
</tr>
</tbody>
</table>

Overview of the Logs Viewer panel

- **What** – the type of file. That is, main, excel, renderer, and so on.
- **Where** – file name, if more than one of that type, and line number
- **When** – date and time stamp (local or UTC)
- **Shift** – time variance from first log entry
- **Level** – error, warning, info, debug, or verbose
- **Tags** – [XYZ] markers found in the log entry
- **Textual search of all filtered log records**
- **Log entry list, where the background color indicates the type of entry:**
  - Error
  - Warn
  - Info
  - Debug
  - Verbose
- **Header – Containing file name and length**
- **The contents of the selected files are saved to a .csv file in %LOCALAPPDATA%\Temp\Refinitiv**
- **Show dates as UTC** – date and time is converted to UTC time zone.
- **Show Dates as Local** – Default. Date and time shown in local time zone.
- **Auto-scroll** – Updates to a single selected file are tracked and the new data is added. Select this to scroll automatically to the bottom when an update occurs.
Importing files

Under the **Files** filter, log files held in folders that are not listed in the Logs Viewer can be imported into the viewer.

To do so:

1. In Windows Explorer, open the folder containing the file(s) to import.
2. Select the file(s).
3. Drag the files into the Logs Viewer panel.
   - When you release your pointing device, the files are added to the viewer under the folder in which they were located.

Using the Actions menu

The **Actions** menu, an ellipsis found under the Actions column, can be used to copy the contents of specific log file entries.

To open the **Actions** menu:

1. Hover your cursor over the Actions column of the entry to copy.
   - An ellipsis appears.
2. Click the column to display the menu.

Choose from the following options:

- **Copy raw line**
  - Copy the original data from the log file to the clipboard. This copies the entire contents of the line, including date, time, and so on.

- **Copy Text Column**
  - Copy the content of the Text column to the clipboard.

---

87 You can copy the files into the existing folder by holding the Ctrl key before releasing your pointing device.
Appendix J: Known issues

Datastream for Office issues

**Warning:** As a result of these issues, existing Datastream for Office (DFO) users should not yet upgrade to Workspace 1.24. A patch release of Workspace correcting this issue will be released early in Q1 2024.

The following issues have been identified that would impact DFO users only:

- When the Autorefresh parameter is set to **Off** in a DSGRID formula, the refresh of the formula may hang and will display **Retrieving data** indefinitely.
- The copying and pasting of a DSGRID formula should use cached data, but currently does not.
- When the **Compile** option is selected in Excel, a VBA alert is displayed when opening a new Request table.
- When cell referencing in the formula builder, the cell to return the formula is moved to the cell reference location, causing an error.

DPRM connection issue

If DPRM-related settings are read incorrectly, it may result in DPRM failing. In this case, the **No working server available for DPRM** log file error message.

**Important:** The workaround, below, is only required for installations of Workspace 1.23 and has been fixed in the Workspace 1.24 release. Therefore, if you have upgraded to 1.24, these settings will need to be removed.

As a workaround, the following settings should be added to your configuration file:

```plaintext
{  "EIKON.STREAMING.API.__CORE__.PLUGINS.ADDITIONAL.LOCAL": "%7%,%8%",
  "EIKON.STREAMING.API.LOCAL.ADDITIONAL_SESSIONS.1": "%EIKON.STREAMING.API.LOCAL.DACS.DPRM.SERVERS%",
  "EIKON.STREAMING.API.LOCAL.ADDITIONAL_SESSIONS.2": "%EIKON.STREAMING.API.LOCAL.DACS.DPRM.PORT%",
  "EIKON.STREAMING.API.LOCAL.ADDITIONAL_SESSIONS.3": "%EIKON.STREAMING.API.LOCAL.DACS.USERNAME%",
  "EIKON.STREAMING.API.LOCAL.ADDITIONAL_SESSIONS.4": "%EIKON.STREAMING.API.LOCAL.DACS.FORCECASE%",
  "EIKON.STREAMING.API.LOCAL.ADDITIONAL_SESSIONS.5": "%USERDETAILS.UUID%",
  "EIKON.STREAMING.API.LOCAL.ADDITIONAL_SESSIONS.6": "%EIKON.STREAMING.API.LOCAL.DACS.DPRM.INTERVAL%"
}
```

Retrieving permissions

If you use this workaround, the default for retrieving permissions from the LSEG Real-Time Advanced Distribution Server, to which you are currently connected, will not work. As such, you need to specify a value for the following setting:

```
EIKON.STREAMING.API.LOCAL.DACS.DPRM.SERVERS
```
Limitations

There are several impacts of these additional settings that are described below.

Defining additional local connections

If you use additional local connections, you will be limited to two. These are the connections configured using the following settings:

- EIKON_STREAMING.API.LOCAL.ADDITIONAL_SESSIONS.7
- EIKON_STREAMING.API.LOCAL.ADDITIONAL_SESSIONS.8

Using Configuration Manager

This workaround will severely impact use of Configuration Manager.

Certain components of Configuration Manager – Streaming feeds, for instance – will not initialized properly. As such, any changes made in Configuration Manager will not persist and, therefore, will have no effect on Workspace.

Exporting data to Excel

This affects users who are not permitted to access the Windows operating system tool, PowerShell, only.

An error message may be displayed when attempting to export data to Excel.

① This has been noted to impact users of the SDC PLATINUM application especially.

Excel add-in loading issues

Trust Center policies

If the Group and/or Microsoft 365 Trust Center policies are set to deny the use of Web add-ins, certain Workspace add-in menu ribbon items, such as Deals BI, may not load.

To resolve this issue, do the following:
1. Open a Microsoft 365 file (Word document, Excel spreadsheet, …)
2. Open the File menu
3. Select Options
4. In the Options dialog, select Trust Center

② For a list of required operating system tools, refer to the System Test Guide.
5. Click the **Trust Center Settings**... button
6. Select **Trusted Add-in Catalogs**
7. Uncheck the **Don’t allow any web add-ins to start** checkbox

Workspace installations without automatic update

For users installing **Workspace using --machine-autoupdate-no**, the Excel add-in does not load correctly on non-virtual machines. This is because the default location of the Office registry key is registered at HKLM.

To correct the registry key location, use the command:

\<install path>\RefinitivWorkspace.exe --update-office-registry=HKCU

Installing standalone Workspace Messenger

For **Workspace 1.21 only**, installation or update of **Workspace Messenger** alone is done using command line statements. That is:

<table>
<thead>
<tr>
<th>Action</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>Installation</td>
<td>RefinitivWorkspace-installer_x.xx.xx.exe --&lt;mode&gt; --messengeronly</td>
</tr>
<tr>
<td>Update</td>
<td>RefinitivWorkspace-installer_x.xx.xx.exe --&lt;mode&gt; --messengeronly</td>
</tr>
<tr>
<td>Uninstallation</td>
<td>&lt;install path&gt;\RefinitivWorkspace\RefinitivWorkspace.exe --&lt;uninstall&gt;</td>
</tr>
</tbody>
</table>

Contributions (RtContribute)

The Refinitiv **Workspace - Excel** (**Workspace** ribbon) add-in was added in **Workspace version 1.16**. The following list summarizes the known issues and their solutions or when they are to be addressed.

<table>
<thead>
<tr>
<th>Issue</th>
<th>Solution/To be addressed in</th>
</tr>
</thead>
<tbody>
<tr>
<td>RTDS requires updating to a new Data Dictionary version.</td>
<td></td>
</tr>
<tr>
<td>LSEG Real-Time Advanced Distribution Server (formerly ADS) version 3.5.2 L1 does not support the contribution from Workspace Excel.</td>
<td>Install version 3.5.2 L3 or higher.</td>
</tr>
<tr>
<td>POS and LANGUAGE parameters are not supported. Requires sending data in RMTES encoding.</td>
<td>Only UTF-8 is supported by the API</td>
</tr>
</tbody>
</table>

LSEG Real-Time Advanced Distribution Server version issues

There were several issues with the handling of WebSocket connections in the initial release of version 3.5.2, which were only partially resolved in 3.5.2 L2.

---

89 PCN206237 provides more information about this fix.
90 See also Creating an internal connection.
Further issues concerning WebSocket connections were addressed in the L3 release, together with minor changes to the default settings, which improved the handling of larger messages.

Virtualized environment issues

**Important:** If you encounter an issue; LSEG requests that you confirm the issue has been reproduced in a non-virtualized environment.

**CVAD environments**

This section lists all known issues for running Workspace on a CVAD environment:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Jira reference</th>
<th>XenApp pub. app</th>
<th>XenApp pub. d’top</th>
<th>Xen Desktop</th>
</tr>
</thead>
<tbody>
<tr>
<td>RTGet template which has 10k functions is not responding on applying &quot;save as val- agreees-Workbook&quot;</td>

<td></td>
</tr>
</tbody>
</table>

**VMware environments**

This section lists all known issues for running Workspace on a VMware Horizon 8 environment:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Jira reference</th>
<th>Horizon virtual apps</th>
</tr>
</thead>
<tbody>
<tr>
<td>There’s only ‘Close window’ in the task bar</td>
<td>SAP-10823</td>
<td>●</td>
</tr>
<tr>
<td>Published Apps - Do not disturb option is activated on Published Apps when Focus assist is OFF in OS settings</td>
<td>SAP-10972</td>
<td>●</td>
</tr>
</tbody>
</table>
SSL inspection support

LSEG does not support or enforce SSL inspection, sometimes referred to as TLS/HTTPS Interception.

If clients use SSL inspection, they must configure URL filtering profiles not to enforce SSL inspection on LSEG domains, such as *.refinitiv.com, *.refinitiv.net, *.refinitiv.biz.

Real-Time server disconnections

In the event where the LSEG Real-Time Distribution System disconnects immediately following a successful mount, refer to Creating an internal connection.

Cache path definition

An alternative cache path can be defined for Workspace during its installation, using the parameter:

```
RefinitivWorkspace-installer_x.xx.xx.exe --cachepath="<folder_path>"
```

However, currently, this does not re-route the entire content of the Refinitiv Workspace folder in the cache. That is, while the electron folder is moved to the new location, the following subfolders are not:

- Config
- Dictionaries
- Data API Proxy
- File Links

Signing in automatically

When users first log into Workspace, they have the option of choosing to sign in automatically in future, which creates a cookie in the electron cache for the user.

However, if electron is upgraded to a higher version, the cache is cleared and users are expected to sign in again.

① As this may occur many months later, users may have lost their credentials.
Rolling back

If your instance of Workspace was upgraded automatically, you can return to the previous version of Workspace by using the rollback parameter in the command line:

"<Install Path>\Refinitiv\Refinitiv Workspace\RefinitivWorkspace.exe" --rollback

However, this command also disables the automatic update feature for subsequent releases of Workspace.

Rolling forward command support

Due to changes to the Workspace architecture, the --rollforward command line parameter is only valid for version 1.19 or higher. Also, this command can only be used after a --rollback operation has been performed.
