About this document

This document outlines the new features, functions and changes added in the desktop version of Workspace 1.26.1:

Document version	Summary	Release date
1261.01	Summary of updates in Workspace 1.26.1	19 April 2025

Intended readership

This document is for customers using or interested in LSEG Workspace version 1.26.1

Supported versions

LSEG provides operational support for versions of Workspace released during the previous nine months (the obsolescence period).

Where there is a patch version, this version will be supported instead of the version it has superseded.

For more information about the specific versions that are currently supported, see the [Workspace Support Policy](#).

What's new in version 1.26.1

Workspace

New features and enhancements

New version of Electron

- Electron 23.3.9-RFV.3 has now been backported into LSEG Workspace, to fix an existing vulnerability.

Datastream Charting enhancements

- Added support for the 'Best Fit' option (optimising the font size on the chart for the selected export dimensions) when exporting charts to PowerPoint, Word, or Excel.

Workspace shortcuts improvement

- Users can now turn off some or all Workspace shortcuts from the Settings menu.

Workspace for Microsoft Office add-in

For the new features, enhancements, and bug fixes released in LSEG Workspace add-in version 26.11.5.0, which will now be available in LSEG Workspace 1.26.1, [click here](#).

New features and enhancements

Chunking support added

- Support for chunking has been added, increasing the maximum number of time series data points that can be returned by the RDP.HistoricalPricing and RHistory functions in Workspace Excel, enabling users to retrieve up to 60,000 rows.

Fixes

Datastream Charting

- Datastream Charting users with Windows PowerShell disabled on their machine can now access the buttons in Report Manager that were previously unavailable.

Datastream for Office (DFO) fixes

- Issue in which an Excel chart with the focus disappears on formula refresh has been resolved.
- Issue arising where a cell reference to a cell reference is used in a DSGRID formula has been fixed.
- Issue caused by the focus is being on a Chart sheet – and refresh is requested – has been resolved.
- Request Table fixes, including:
 - The 'Data destination as Excel formula' now works correctly with a single request
 - Issue in which a path was specified to an external workbook and a workbook with the same name was opened, resulting in values being incorrectly placed in the open workbook, has now been resolved.
 - In the conversion wizard, the calculation setting is no longer set to automatic after saving Request Table.

Fixed issues

Previous session setting fix

- The 'Previous session' setting for Browser and Tiles defaults now no longer intermittently fails to save on Workspace exit.
 - We have implemented a more elastic timeframe to save before exiting Workspace, resulting in the previous session restoring correctly when Workspace is restarted. This will also eliminate the amber 'Layout cannot save' error banner shown in Layouts saved as part of the previous session.

Office Add-in fixes

- Increased number of calendar codes supported in RDP.DateListHolidays.
- Improved stability and performance for formula recalculation.
- Further improvements to nested IF functions.
- Improvements have been made to the DAY parameter in the RDP.HistoricalPricing and RHistory functions.

Version history

Workspace 1.26

Release date: 15 February 2025

Workspace

Enhancements	<ul style="list-style-type: none">• Refresh of Datastream charts• Improvements to Tile management• Support for AdfinX Analytics• HistoricalPricing API enhancements• Productivity tool obsolescence
