

FTSE AFCM Low Carbon Select Total Return Index

FACTSHEET

FTSE AFCM Low Carbon Select Total Return Index

FTSE AFCM Low Carbon Select Index offers a benchmark for investors wishing to commit capital to companies that actively invest in and promote low carbon activities in the running of their businesses. Since the index includes those companies as constituents that are investing to reduce energy consumption and hence contributing to lower the carbon footprint of the region, it is the best fit and generates the high interest and demand among investors. The index utilises reported CO2 levels of constituents of starting universe and the final index selection reflects the principles and impact of CO2 levels.

The index tracks the price and total return of selected 40 publicly traded equities in selected countries as defined in starting universe.

BENCHMARK REGULATION

Neither FTSE International Limited nor Refinitiv Benchmark Services (UK) Limited nor any other member of the London Stock Exchange Group plc group of companies, is the benchmark administrator of the FTSE AFCM Low Carbon Select Index.

METHODOLOGY

Selection:

- The constituents' universe includes equities traded on Bahrain, Egypt, Jordan, Kuwait, Morocco, Oman, Saudi Arabia, Qatar, and the United Arab Emirates. To construct the parent index, the universe then follows rules applied to FR Global Equity Indices (FRGEI), which are free float adjusted market capitalisation weighted indices.
- After applying initial filters, as stated in index methodology, portfolio of 40 constituents is selected by examining ESG Analytic Estimated CO2 Total, considering the CO2 Estimation Method (possible values are "Reported", "CO2", "Energy", and "Median"). Priority is given to all companies that have a "Reported" CO2 value, meaning that they have provided a current number.
- Sectors are capped at 30% and individual constituents are capped at 9%. At rebalance, the companies are weighted by free float market capitalisation.

Rebalance: Semi-annual
