MONTHLY REPORT | JANUARY 2026

EUROPE

EUROZONE & UK EDITION

After volatile Q4 rally, markets exhibit heightened vigilance going into 2026

Q4's market moves exposed concerns around the AI investment theme and stretched asset valuations. US markets were clouded by the lack of timely macroeconomic data.

Global Equities – Asia Pacific and European equities lead in Q4

In local terms, the Asia Pacific, Japan, FTSE 100 and Eurozone indices outperformed FTSE All-World, while FTSE 250, Emerging, Russell 1000 and Russell 2000 lagged. Over 12M, Asia Pacific equities led.

Global Fixed Income – High yield (HY) mostly outperforms investment grade (IG)

US, EM \$ and Euro HY sectors outperformed their IG counterparts in Q4. However, UK IG beat GBP HY and global IG peers. Over 12M, HY largely outperformed IG.

Equity Industries – Cyclicals and Health Care lead in most regions

In local currency terms, Energy, Tech, Financials, Basic Materials and Health Care led returns in most regions in Q4. Return dispersion across regions was high.

Alternative Indices – REITs and Infrastructure mostly lag

During Q4, when equity indices rallied despite their November pause, most REITs and Infrastructure indices underperformed their respective equity benchmarks. Silver far outpaced gold and its own prior quarter performances, helped by both industrial and investment demand, while energy commodities posted losses.

Equity Factors – Value and larger equities in favor in Q4

In local currency terms, Value outperformed and (Small) Size lagged across regions as the tech rally moderated. Preference for larger equities may reflect investor caution.

Foreign exchange – Euro and Pound strength moderates in Q4

The US dollar continued to recover in Q4 and was flat versus the euro and pound for the quarter. The yen depreciated substantially versus the dollar, euro and pound, while several EM currencies gained, including the yuan.

After diverging during Feb-Apr, Russell 1000 and FTSE All-World ex US posted steady positive returns until Nov when they were flat. Ex-US equities outpaced US equities in Dec.

Macro Overview — Fourth Quarter 2025

During Q4 2025, key market narratives were tested. In November, continued US policy rate cuts came into question in the absence of timely economic data, which sent US yields higher. However, they eased again on dovish Fed signals in response to softer US labor market conditions, and a subsequent December rate cut. The capex fuelled AI equity run was challenged as increasing use of leverage and circular investments within the AI ecosystem added to investor concern with equity valuations. However, investors found reasons for optimism once again in Q3 tech earnings, among other factors.

Moreover, economic activity indicators remained healthy as global trade patterns were recast, easing the blow from US tariffs. During Q3, the US, Canada, Eurozone and UK expanded, while Japan contracted. But it is worth noting that QoQ GDP growth has been volatile as import/export patterns were distorted by tariff frontloading. December composite PMIs were healthy and mostly expansionary.

In November, US CPI inflation registered slightly below expectations (after a missing October print). CPI inflation was markedly lower in the UK, supporting its central bank's easing decision in December. Canadian and Eurozone inflation held steady and close to target, while Chinese

In Q4, German 2-yr & 10-yr govt. yields rose 10 & 14 bps, respectively, as the ECB indicated an end to its easing cycle.

inflation ticked up, slightly easing deflationary fears.

In this (mostly) benign global growth and inflation context, the Fed eased twice over Q4 (on account of a deteriorating US labor market), while the Bank of Canada and Bank of England eased once. The Bank of Japan delivered on a widely anticipated rate hike. The European Central Bank and People's Bank of China held rates.

Long government yields diverged in Q4. They rose notably in Japan, Canada and Germany, while they declined in the UK, helped by greater fiscal certainty and easing inflation. US yields were flat QoQ.

Despite intra-quarter volatility, most global equities gained, as financial conditions eased and AI optimism was sustained, but without clear cyclical-defensive leadership. A few industries carried index returns in each region, ranging from those with high exposure to the AI narrative and metals rally, to those with positive policy tailwinds. Most fixed income sectors also gained. The US dollar continued to recover, especially versus DM currencies.

Compared to the start of 2025, global markets entered 2026 with much less concern over the fallout from US trade policy, but a heightened vigilance over the sustainability of this multi-year bull run in risk assets.

In Q4, UK 2-yr & 10-yr govt. yields fell 28 & 23 bps, respectively, after the autumn budget and lower Nov inflation.

Asset Class Returns – 3M & 12M (LCY, EUR, GBP, TR %)

In Q4, global equities rallied despite a moderation in November when key market narratives were tested. The AI theme came into question, adversely impacting tech-related equities, but markets found reasons for optimism in Q3 tech earnings and the Fed easing once again in December.

In local currency terms, the Asia Pacific, Japan, FTSE 100 and Eurozone indices led returns outperforming the FTSE All-World index, while the FTSE 250, Emerging, Russell 1000 and Russell 2000 indices trailed. Even as tech and related sectors staged a recovery globally after a brief pullback in November, strong contribution from the Banks sector helped Eurozone equities outperform All-World ex Eurozone equities (pg. 7). UK large-caps outpaced small-caps, again on the strength of contributions from Banks as well as Pharma & Biotech (page 8). Over 12M, Asia Pacific equities led performance among major FTSE regions and countries, helped by eye-popping returns from Korea equities (pg. 5).

The US dollar, which had weakened over H1 2025, gained ground over H2 2025. In Q4, the dollar's performance versus global FX was mixed. It was flat versus the euro and British pound but weaker versus the yuan. The dollar, euro and pound all appreciated substantially versus the yen, which was weaker on domestic policy issues. The euro's and pound's strength versus the yen eroded the Japan index's EUR- and GBP-denominated returns for the quarter.

In EUR and GBP terms, the Asia Pacific, FTSE 100 and Eurozone indices outperformed FTSE All-World for the quarter, while Japan, FTSE 250, Russell 1000, Russell 2000 and Emerging trailed.

Copper and gold continued to rally (after the latter's brief pullback at the end of October) while oil continued to post losses on unfavorable near-term supply/demand dynamics.

Asset Class Returns – 3M & 12M (LCY, EUR, GBP, TR %)

In Q4, long yield moves in key G20 economies were mixed (pg. 11). Notably, long government bond yields were higher in Japan as the new government's planned fiscal stimulus and tepid demand for ultra long bonds put upward pressure on yields. Yields fell in the UK helped by incremental clarity over the fiscal situation and easing inflation.

In local currency terms, within the 7-10 year government bond sector, UK bonds outperformed peers. They were followed by EM, US, French, Chinese, German and Japanese bonds; the latter two posted losses. This was largely consistent with 12M trends except for US government bonds leading 12M returns. Among corporate bond sectors, high yield (HY) largely outperformed investment grade (IG) except in the UK where UK IG beat GBP HY. Over 12M, HY sectors outperformed IG in the US, Europe and UK as spreads remained tight. Among inflation-linked bonds (ILBs) duration was helped by lower yields in the UK.

In EUR and GBP terms, Japanese bond losses were exacerbated by the yen's relative weakness.

Source: FTSE Russell and LSEG. Data as of December 31, 2025. Past performance is no guarantee of future results.

Global Equity Returns – 3M & 12M (LCY, EUR, GBP, TR %)

In Q4, global equities rallied with a few exceptions. In November, Tech- and Telecom-heavy indices suffered from a check to the AI investment theme but largely recovered by quarter-end. In local terms, FTSE Korea and FTSE Taiwan led Developed and Emerging country returns, respectively, for the quarter. FTSE China and Saudi Arabia posted losses.

The 2025 performance of key FTSE indices reflected major equity return drivers. 12M returns were dominated by equities in Korea and Taiwan (AI capex); Spain and Italy (growth in Europe's periphery relative to core); South Africa (demand for precious metals); Israel (defence tech); and Mexico, China, Hong Kong and Brazil (resilience in the face of US tariffs, in addition to domestic factors).

Source: FTSE Russell and LSEG. Data as of December 31, 2025. Past performance is no guarantee of future results.

Regional Industry-Weighted Contributions to Returns – 3M (LCY, TR %)

In Q4, industry contributions were mostly positive but without a clear cyclical-defensive split in performance leadership.

Tech's contribution in the US was muted compared to previous quarters, but the industry was accretive to returns in 5 of 6 regions.

Related to the AI theme, Telecoms contributed strongly to Asia Pacific index returns but had little impact elsewhere.

While Financials struggled in October, it rebounded to contribute broadly to Q4 index returns, notably outside the US. Discretionary was a drag on the Emerging index.

Other cyclicals such as Basic Materials, Energy and Industrials were accretive to index returns in most regions.

Among defensives, Health Care, Consumer Staples and Utilities generally contributed positively.

In Q4, Energy, Tech, Financials and Basic Materials were among the industries leading performance in key regions.

Tech is the largest in the US & Emerging; Financials in the UK, Europe & Asia Pacific; and Industrials in Japan.

FTSE 100 vs FTSE 250: Sector-Weighted Return Contributions – 3M (GBP, TR %)

Large-cap banks and pharma sectors helped FTSE 100 beat FTSE 250 in Q4.

FTSE 250 is far more exposed to Financials & other cyclicals, and less to Energy & defensives than FTSE 100.

Source: FTSE Russell and LSEG. Data as of December 31, 2025. Past performance is no guarantee of future results.

Alternative Indices Returns – 3M & 12M (USD, TR %)

During Q4, as equity indices broadly rallied, most alternative indices lagged their benchmarks.

The quarterly performance of regional real estate and infrastructure indices was mostly in line with 12M trends. EPRA Nareit Japan outperformed the index over the longer timeframe helped by secular tailwinds in the industry, and Emerging Core Infrastructure outperformed in Q4 unlike over the 12M horizon.

Benchmark (All Cap) USD Returns (%)						
	US	UK	Dev Europe ex UK	Japan	Dev AP ex Japan	
3M	2.3	6.4	6.2	2.8	8.5	17
12M	17.2	32.7	37.5	26.1	418	25.0

FTSE EPRA Nareit Global Real Estate – 3M & 12M USD (Relative)

FTSE Core Infrastructure returns – 3M & 12M USD (Relative)

Over 12M, real estate indices lagged benchmarks, except in Japan where the industry enjoyed secular tailwinds.

The FTSE CoreCommodity CRB Index* (based on futures contracts) was essentially flat over Q4 as the positive returns from precious and industrial metal components of the index were eroded by the losses from crude oil and other energy components. The Non-Energy and Non-Agriculture and Livestock versions of the index posted strong returns consistent with 12M trends.

Silver recorded a spectacular rally in Q4 even relative to its quarterly returns during Q1-Q3 as the metal benefitted from both industrial and investment demand. Copper and gold posted respectable gains, paling only in comparison to silver's performance.

FTSE Core Commodity CRB® Returns - 3M & 12M USD

FTSE CoreCommodity CRB® Single Commodity Returns - 3M & 12M USD

Over 12M, Silver far outpaced gold's performance helped by industrial and investment demand.

Select CRB Commodity Returns (rebased, USD)

Source: FTSE Russell and LSEG. Data as of December 31, 2025. Past performance is no guarantee of future results. *The FTSE CoreCommodity CRB Index series is based on commodity futures contracts that account for carry costs (e.g. storage, transportation, insurance) and their returns may deviate from spot price returns. These indices may form the basis of commodities investment vehicles.

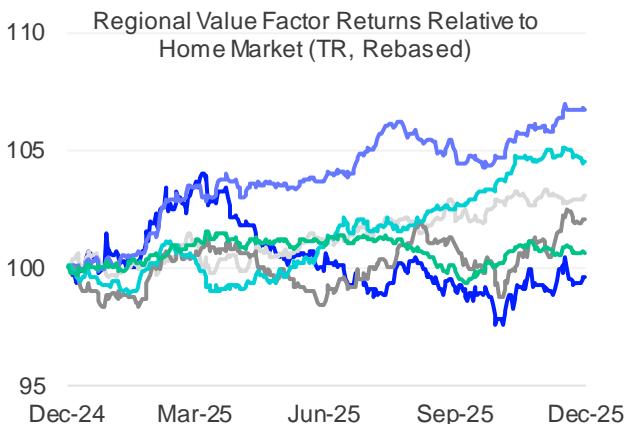

Equity Factor Relative Returns – 3M & 12M (LCY, TR %)

In Q4, Value broadly outperformed, including in the US, even as (Small) Size trailed benchmark indices across regions. This may be due to strong industry outperformance, for example, in Financials and Industrials, as well as investors seeking value within industries. At the same time, larger equities seemed to be in favor, with their potential to offer a measure of security during a volatile quarter for risk assets. Asia Pacific factor patterns stood out from other regions, especially in the magnitude of their outperformance and underperformance.

Over 12M, Value outperformed in 5 of 6 regions, helped by Q4's broad outperformance including in the US.

Size's Q4 underperformance contributed to the factor trailing benchmarks over 12M, except in Europe and Japan.

Source: FTSE Russell and LSEG. Data as of December 31, 2024. Past performance is no guarantee of future results.

Foreign Exchange Returns – 3M & 12M TR %

In Q4, long yields rose in Japan, Canada, Germany, Mexico and Brazil among major developed and emerging economies. They declined notably in South Africa and the UK. In the UK, the autumn budget seemed to satisfy market expectations on fiscal discipline and CPI inflation declined MoM in November easing the pressure on gilt yields. Long yields were notably higher in Japan on the government's planned fiscal stimulus package and anticipated higher borrowing needs. Demand for ultra long Japanese government bonds has also been moderating for some time.

FX performance versus the euro and pound over Q4 was mixed. While both currencies strengthened notably versus the yen, they were flat against the US dollar and depreciated versus several EM currencies.

FX Moves vs EUR – 3M & 12M

Over 12M, the dollar, yuan, yen & pound were all weaker vs the euro, even as euro strength has moderated recently.

10Y Benchmark Yield Changes (%) - 3M & 12M

FX Moves vs GBP – 3M & 12M

Over 12M, the euro was stronger vs. the pound, gaining steadily since Q2. The dollar, yen & yuan were weaker.

FX Moves vs EUR (Rebased)

FX Moves vs GBP (Rebased)

Asset Class Risk/Return – 1-Year and 5-Year (EUR)

In EUR terms, over one year, gold remained the best-performing asset class by far, on an absolute and return-for-unit-risk basis. It was followed by Eurozone equities and EUR HY in terms of return-to-risk ratio. Among equities, Developed Europe ex UK and FTSE 100 followed Eurozone equities.

Source: FTSE Russell and LSEG. Data as of December 31, 2025. Past performance is no guarantee of future results.

Asset Class Risk/Return – 1-Year and 5-Year (GBP)

In GBP terms, over one year, gold remained the best-performing asset class by far, on an absolute and return-for-unit-risk basis. Gold was followed closely by GBP HY in terms of best return for unit risk. Among equities, the Developed Europe ex UK, FTSE 100 and FTSE All-World ex USA indices posted strong return-to-risk ratios.

Source: FTSE Russell and LSEG. Data as of December 31, 2025. Past performance is no guarantee of future results.

Correlations

Rolling 2-year correlations of regional equity indices relative to the FTSE Developed Europe ex UK index had declined earlier in 2025 amid divergence in global equity performance, especially as US equities struggled relative to that of All-World ex US. In Q2, rolling correlations ticked up amid the global sell-off and rebound but have declined since Q2, potentially offering more diversification opportunities for investors. More recently, the correlation with FTSE UK has increased.

FTSE Russell's Sustainable Investment Indices for the FTSE4Good and Environmental Opportunities indices ([link](#))

- FTSE4Good Index Series ([link](#))

- FTSE Environmental Markets Index Series for the Environmental Opportunities indices ([link](#))

FTSE Infrastructure Indices for core infrastructure markets ([link](#))

FTSE/CoreCommodity CRB Indices ([link](#))

ABOUT FTSE RUSSELL

FTSE Russell is a leading global provider of index and benchmark solutions, spanning diverse asset classes and investment objectives. As a trusted investment partner we help investors make better-informed investment decisions, manage risk, and seize opportunities. Market participants look to us for our expertise in developing and managing global index solutions across asset classes. Asset owners, asset managers, ETF providers and investment banks choose FTSE Russell solutions to benchmark their investment performance and create investment funds, ETFs, structured products, and index-based derivatives. Our clients use our solutions for asset allocation, investment strategy analysis and risk management, and value us for our robust governance process and operational integrity. For over 40 years we have been at the forefront of driving change for the investor, always innovating to shape the next generation of benchmarks and investment solutions that open up new opportunities for the global investment community.

All information is provided for information purposes only. All information and data contained in this publication is obtained by LSEG, from sources believed by it to be accurate and reliable. Because of the possibility of human and mechanical inaccuracy as well as other factors, however, such information and data is provided "as is" without warranty of any kind. No member of LSEG nor their respective directors, officers, employees, partners or licensors make any claim, prediction, warranty or representation whatsoever, expressly or impliedly, either as to the accuracy, timeliness, completeness, merchantability of any information or LSEG Products, or of results to be obtained from the use of LSEG products, including but not limited to indices, rates, data and analytics, or the fitness or suitability of the LSEG products for any particular purpose to which they might be put. The user of the information assumes the entire risk of any use it may make or permit to be made of the information.

No responsibility or liability can be accepted by any member of LSEG nor their respective directors, officers, employees, partners or licensors for (a) any loss or damage in whole or in part caused by, resulting from, or relating to any inaccuracy (negligent or otherwise) or other circumstance involved in procuring, collecting, compiling, interpreting, analysing, editing, transcribing, transmitting, communicating or delivering any such information or data or from use of this document or links to this document or (b) any direct, indirect, special, consequential or incidental damages whatsoever, even if any member of LSEG is advised in advance of the possibility of such damages, resulting from the use of, or inability to use, such information.

No member of LSEG nor their respective directors, officers, employees, partners or licensors provide investment advice and nothing in this document should be taken as constituting financial or investment advice. No member of LSEG nor their respective directors, officers, employees, partners or licensors make any representation regarding the advisability of investing in any asset or whether such investment creates any legal or compliance risks for the investor. A decision to invest in any such asset should not be made in reliance on any information herein. Indices and rates cannot be invested in directly. Inclusion of an asset in an index or rate is not a recommendation to buy, sell or hold that asset nor confirmation that any particular investor may lawfully buy, sell or hold the asset or an index or rate containing the asset. The general information contained in this publication should not be acted upon without obtaining specific legal, tax, and investment advice from a licensed professional.

Past performance is no guarantee of future results. Charts and graphs are provided for illustrative purposes only. Index and/or rate returns shown may not represent the results of the actual trading of investable assets. Certain returns shown may reflect back-tested performance. All performance presented prior to the index or rate inception date is back-tested performance. Back-tested performance is not actual performance, but is hypothetical. The back-test calculations are based on the same methodology that was in effect when the index or rate was officially launched. However, back-tested data may reflect the application of the index or rate methodology with the benefit of hindsight, and the historic calculations of an index or rate may change from month to month based on revisions to the underlying economic data used in the calculation of the index or rate.

This document may contain forward-looking assessments. These are based upon a number of assumptions concerning future conditions that ultimately may prove to be inaccurate. Such forward-looking assessments are subject to risks and uncertainties and may be affected by various factors that may cause actual results to differ materially. No member of LSEG nor their licensors assume any duty to and do not undertake to update forward-looking assessments.
