US EDITION

MONTHLY REPORT | JUNE 2026

Riding AI tailwinds and renewed hopes of a Middle East deal, global equities rally; oil price and yields ease

Early May's risk-off sentiment reversed around mid-month upon renewed Middle East deal hopes, infusing optimism in markets, yet again.

Global Equities – AI-related equities drive tech-heavy indices to the top

A robust AI capex pipeline and resilient tech earnings put tech-heavy indices on top in May. Asia Pacific ex Japan led equity returns among major FTSE regions, followed by Japan, Russell 1000 and Russell 2000. Europe, Emerging and the UK lagged.

Global Fixed Income – Duration gets reprieve as yields ease during May

Long-duration bonds have suffered since the start of the Middle East conflict as yields have backed up on higher inflation and rate expectations. May saw a slight reversal in that trend as yields eased somewhat. US and UK IG sectors outperformed HY, while 10+ year ILBs beat their shorter-duration counterparts.

Equity Industries – Tech & Telecoms soar; Energy lags the most

On average, Tech and Telecoms led industry returns in May, while Energy was a drag on index returns as oil prices fell. Most cyclicals rose and defensive industries lagged as market sentiment turned more risk-on toward the second half of the month.

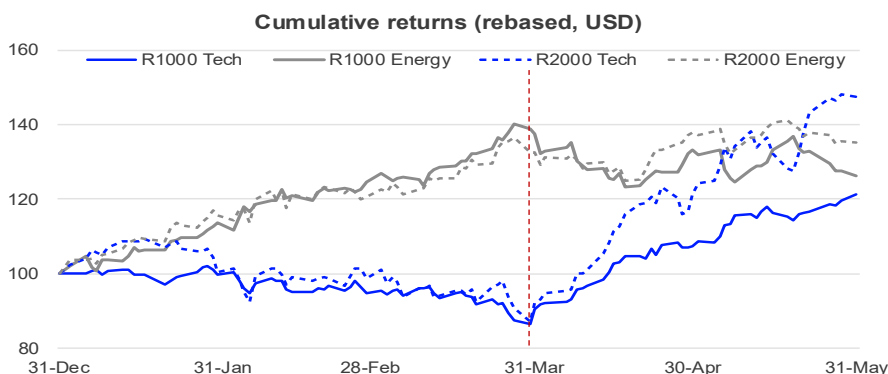

Alternative Indices (USD) – REITs continue to lag; energy futures pull back

Most REITs indices lagged as equity benchmarks rallied in May, with the UK real estate index being an exception. Energy components of the FTSE CRB Commodity Index posted losses as spot and near-term futures-based index prices of crude oil pulled back in May on renewed hopes for a resolution to the Middle East conflict.

Foreign exchange – US dollar performance is mixed

The US dollar has generally appreciated during risk-off periods of the three-month long Middle East conflict and vice versa. Its performance was mixed in May as market sentiment shifted intra-month. YTD, in a more secular trend, the yuan has appreciated versus the dollar while the yen has weakened.

During April-May, US (and global) equities have told a tale of two industries—Tech's rebound after the Feb Software disruption wobbles, and Energy's moderation after March's solo rally. Relative exposure to these industries has largely determined equity leadership.

Macro Overview — May 2026

In May, asset markets continued to see elevated macro uncertainty and volatility arising from the Middle East crisis. Heading into the month, markets exhibited risk-off traits with the global equity rally narrowing considerably, driven almost entirely by the secular surge in AI-related stocks. Government yields continued to climb, driven by higher inflation expectations and more hawkish central bank stances. Toward the second half of May, there were renewed hopes for a resolution to the conflict; yields eased and the equity rally broadened. Moreover, there was no stopping AI-related stocks, particularly memory chip makers, three of which have crossed the \$1 trillion mark for market cap over the last two months.

From a macro standpoint, cracks have emerged, with the understanding that the worst may be yet to come if the crisis prolongs; or at the very least, there is likely to be a long tail of impact from this energy shock even if the Strait of Hormuz were to reopen fully, given the three-month disruption to shipping and damage to energy infrastructure.

In terms of economic growth, the US's Q1 GDP growth was revised down from 2.0 % to 1.6%; however, US composite PMI held steady in May. US CPI inflation rose y/y in April and US consumer confidence was at historic lows at the

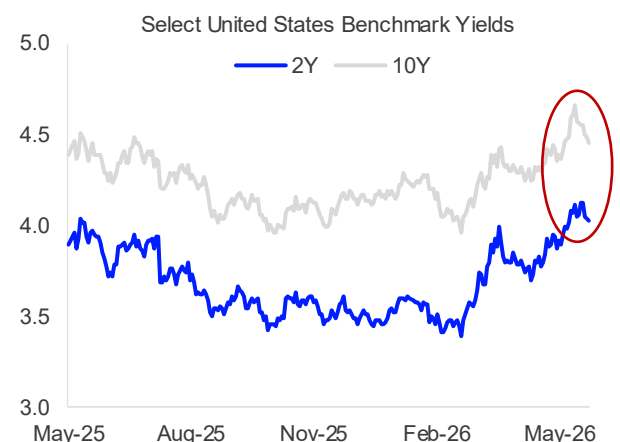

end of May. PMIs in Europe, UK and Japan declined further m/m partly given their greater exposure to the Middle East energy shock. In many G7 economies headline inflation rose m/m in April. At the same time, core inflation was steadier and even declined in the UK, Eurozone, Japan and Canada. However, there remains a risk that sustained elevated inflation from higher energy prices could lead to second order effects (e.g. higher wage inflation, input costs) and inflation becoming entrenched.

In the meantime, earnings resilience and tech earnings beats have propped AI-related stocks, particularly within Tech and Telecoms industries, putting global equity indices with high exposure to this trend ahead of others. Conversely, oil prices backed down in the wake of US-Iran deal negotiations in May and hopes of a resolution to the conflict. As a result, Energy was a major drag on index performance globally. Broadly, the market was exhibiting more risk-on characteristics toward month-end.

However, much rides on a potential near-term resolution of the Middle East conflict to limit the damage to the growth and inflation picture and to sustain the risk rally, secular trends such as AI capex notwithstanding.

Both US and global equities gained in May when markets turned optimistic (yet again) about a Middle East peace deal.

US yields backed down during the second half of May in line with rising market optimism about a peace deal and easing oil prices.

Asset Class Returns – 1M & YTD (LCY, USD, TR %)

In May, market sentiment swung once again from pessimism about the resolution of the Middle East conflict to optimism about a peace deal amid a 60-day cease fire extension. Equity markets went along for the ride, losing ground early in the month even as they were propped by AI tailwinds, and then gaining more broadly toward the second half of May. From an industry standpoint, AI-related beneficiaries in Tech and Telecoms led the charge globally, while Energy struggled with the decline in oil prices, impacting index performance accordingly.

In local currency terms, Asia Pacific ex Japan continued to lead equity market returns, consistent with the YTD and longer-term trend, followed by Japan which outperformed the All-World index. The Russell 1000, Russell 2000, Europe, Emerging and UK indices trailed the global benchmark. Not surprisingly, Tech Hardware and Software, and Telecom Equipment were the largest contributing sectors to the US and All-World ex US indices (page 7), while Oil, Gas & Coal was a major detractor.

Currency moves versus the US dollar were also volatile, as the dollar gained during the early risk-off period in May but lost ground during the second half when risk-on sentiment returned. The yen, however, continued to weaken versus the dollar as in April, eroding the dollar-based returns of Japanese assets. On balance, currency effects had a mixed impact on the dollar-based returns of global assets.

Spot crude oil (Brent) price, which had risen over 77% in March, declined slightly in April and then more substantially in May. Near-term futures-based oil prices showed a more moderate decline over the month (page 9). Energy components weighed on the broad CRB Commodity Index. Copper continued to gain in May as in April, partly due to disruptions to the supply of key inputs in the refining process (e.g. sulfuric acid).

Asset Class Returns – 1M & YTD (LCY, USD, TR %)

Government bond yields in key G7 economies such as the US, UK and Germany had been backing up since mid-April but declined over the second half of May on renewed hopes for a resolution to the Middle East conflict and a 60-day cease fire extension. Further, oil prices (the key transmission mechanism for higher inflation and rate expectations) eased notably during that time. Generally, bond sectors experienced a modest relief rally. In Japan, while yields eased slightly later in May, the 10-year yield ended the month 18 bps higher, being under pressure from a combination of macro (the Middle East crisis impact, looser fiscal outlook) and bond market (supply-demand dynamics) factors.

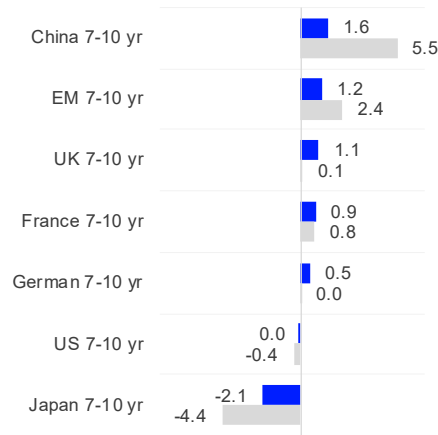

In local currency terms, within the 7-10 year government bond sector, UK bonds whose yields had eased notably in May outperformed peers. They were followed by France, Germany, EM, China, US and Japan bonds. Among corporate bond sectors, duration had been out of favor since the crisis began but May saw some investment grade (IG) sectors such as those in the UK and the US outperform high yield (HY), while Euro HY and EM \$ HY continued to beat their IG counterparts. Among inflation-linked bonds (ILBs), the 10+ year segments beat their shorter-dated counterparts in a reversal from the trend over March-April since the Middle East conflict began.

Global Equity Returns – 1M & YTD (LCY, USD, TR %)

In May, the impact of the AI-fuelled tech rally dominated other trends. Korea and Taiwan equities led returns among FTSE Developed and FTSE Emerging countries, respectively, by wide margins, benefitting from their exposure to the Tech Hardware and Telecom Equipment sectors. European peripheral equities also rallied notably.

With crude oil and related commodity prices moderating in May, indices with higher exposure to Energy struggled, e.g. Brazil, Saudi Arabia, UAE, and the UK. In others, Financials came under strain with more hawkish rate expectations. The Australian central bank hiked for the third time this year in May, which was a headwind to the FTSE Australia index with over 38% weight in Financials.

Regional Industry-Weighted Contributions to Returns – 1M (LCY, TR %)

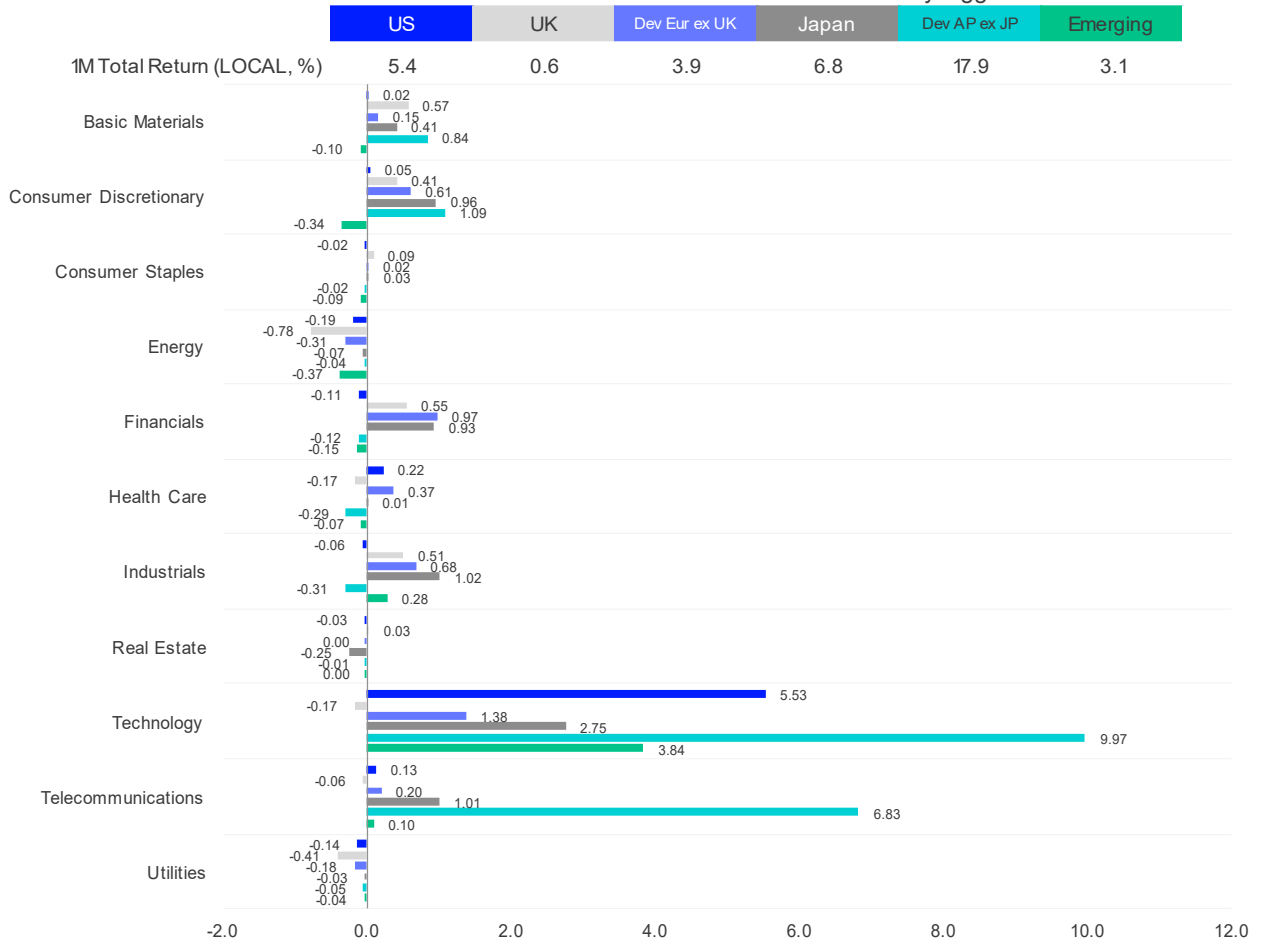

Overall, in May, industry return patterns reflected secular tailwinds from AI investment alongside the cyclical/risk-on characteristics during the second half of the month.

Tech contributed broadly, and substantially to the US and Asia Pacific indices (with SK Hynix being a key constituent), as the AI capex outlook remained robust and tech companies' first quarter earnings mostly beat expectations. Asia Pacific Telecoms (with Samsung

Electronics) was another key beneficiary of this trend.

Other cyclicals such as Discretionary, Basic Materials and Industrials were largely accretive. Financials struggled in the US, Asia Pacific and Emerging.

Energy, which was the only accretive industry in March, detracted broadly in May, notably in the UK, as the price of oil moderated with hopes of a resolution to the Middle East conflict. Defensives broadly lagged over the month.

In May, on average, Tech and Telecoms led industry returns, while Energy lagged the most.

Tech is the largest in the US & Emerging; Financials in the UK, Europe & Asia Pacific; and Industrials in Japan.

FTSE USA vs AW ex US: Sector-Weighted Return Contributions – 1M (USD, TR %)

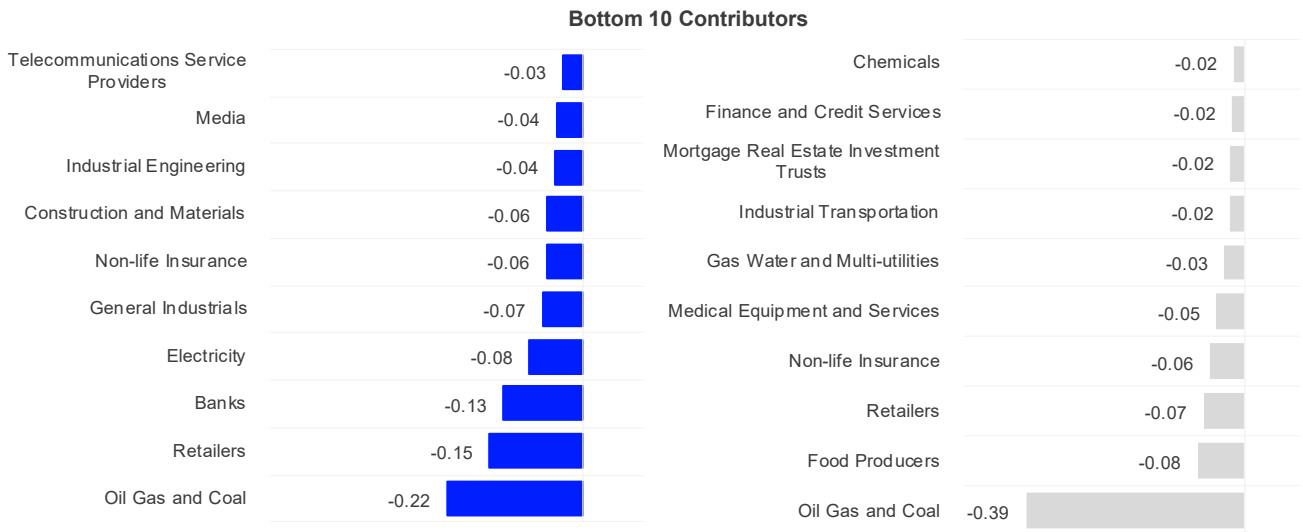

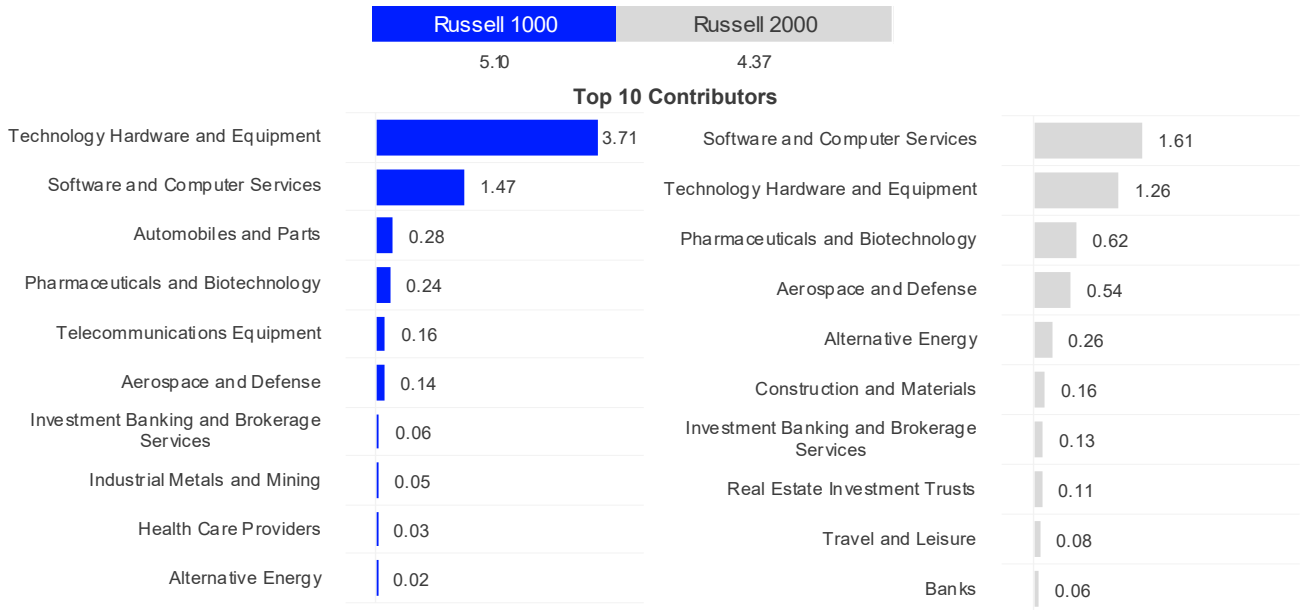

US slightly outperformed ex-US peers in May by faring better in sectors like tech software, pharma & biotech and autos & parts.

The US is tilted more to Tech & Discretionary than peers, and less to Financials, Basic Materials and Industrials.

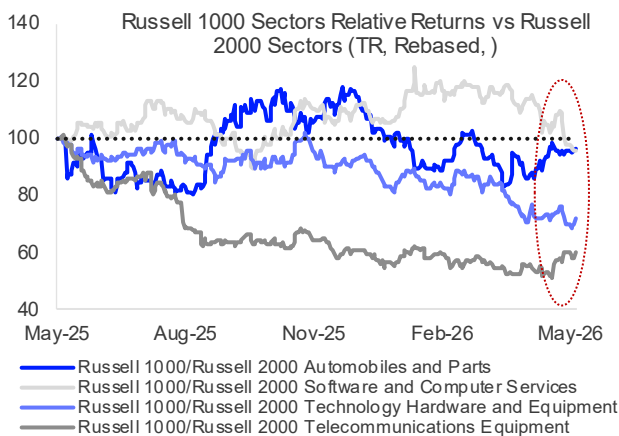

Source: FTSE Russell and LSEG. Data as of May 31, 2026. Past performance is no guarantee of future results.

Russell 1000 vs 2000: Sector-Weighted Return Contributions – 1M (USD, TR %)

Small-cap tech beat large-cap tech in May, but outperformance in sectors like autos and telecom equipment put Russell 1000 ahead.

Russell 2000 is more tilted to Financials, Industrials, Health Care & Energy than Russell 1000 and much less so to Tech.

Source: FTSE Russell and LSEG. Data as of May 31, 2026. Past performance is no guarantee of future results.

Alternative Indices Returns – 1M & YTD (USD, TR %)

During May, most real estate and core infrastructure indices trailed their equity benchmarks.

Given the decline in UK long yields, EPRA Nareit UK led its equity benchmark while the reverse was true in Japan where long yields rose during the month.

Core Infrastructure indices have trailed equity benchmarks over the short- and long-term timeframe. While there are sector-specific reasons, higher rates tend to challenge valuations for this long-term asset.

Benchmark (All Cap) USD Returns (%)						
	US	UK	Europe ex UK	Japan	Dev AP ex Japan	Emerging
1M	5.2	0.0	3.6	4.9	15.1	3.6
YTD	11.3	6.6	7.6	16.4	46.2	11.4

FTSE EPRA Nareit Global Real Estate – 1M & YTD USD (Relative)

FTSE Core Infrastructure returns – 1M & YTD USD (Relative)

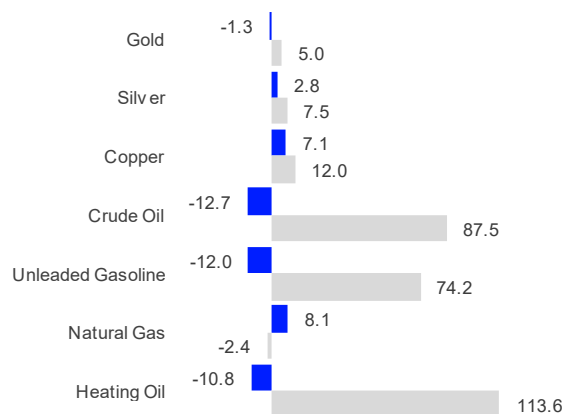

The FTSE CoreCommodity CRB Index* (based on near-term futures contracts) had gained over March and April but posted a loss in May as it was weighed down by its energy components. It is worth noting that the energy components did rise early in the month before declining on renewed optimism for a US-Iran deal and eventual normalization of global energy supplies.

The FTSE CoreCommodity CRB single commodity indices for Crude Oil, Heating Oil and Unleaded Gasoline pulled back during May, while Copper and Natural Gas gained notably. The precious metals indices were more or less flat for the month.

FTSE Core Commodity CRB® Returns - 1M & YTD USD

FTSE Core Commodity CRB® Single Commodity Returns - 1M & YTD USD

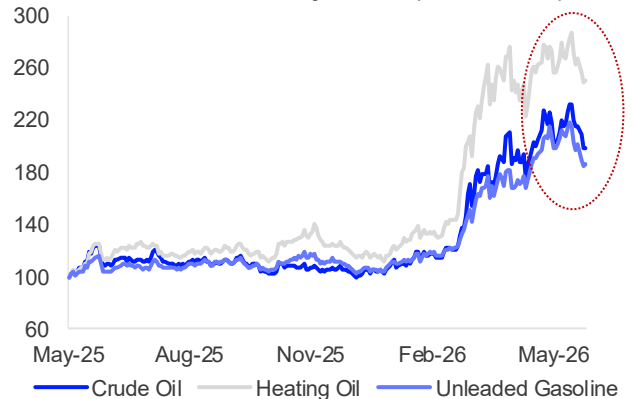

Real estate indices lagged equity benchmarks over 12M due to both higher yields and strong benchmark rallies.

Futures-based energy commodity indices continued to spike early in May but began to moderate on Middle East deal hopes.

Select CRB Commodity Returns (rebased, USD)

Source: FTSE Russell and LSEG. Data as of May 31, 2026. Past performance is no guarantee of future results. *The FTSE CoreCommodity CRB Index series is based on commodity futures contracts that account for carry costs (e.g. storage, transportation, insurance) and their returns may deviate from spot price returns. These indices may form the basis of commodities investment vehicles.

Foreign Exchange Returns – 1M & YTD TR %

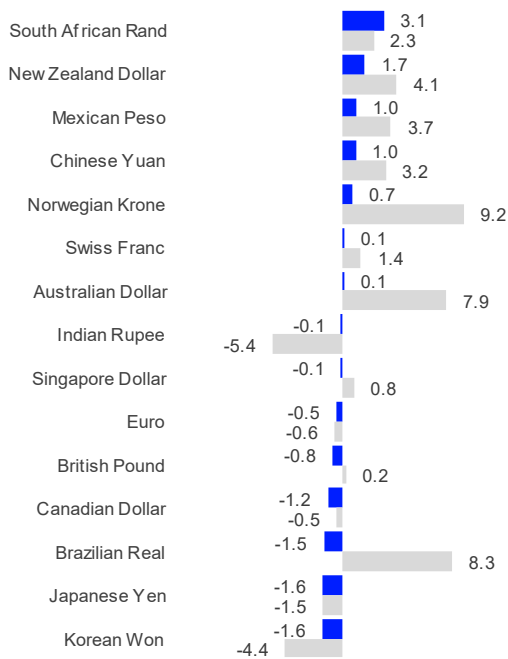

In May, long yields in key markets such as the US, UK and Germany rose until about mid-month before declining once again as hopes for a resolution to the Middle East conflict rose amid an announced 60-day cease fire extension. Yields also declined in some cases as growth worries began to outweigh inflation concerns, e.g. in the UK and South Africa.

The US dollar has performed a safe haven role during this Middle East conflict, gaining versus global currencies during risk-off periods and vice versa. On balance, its performance in May was mixed as market sentiment shifted during the month from pessimism to more optimism about the prospects for a US-Iran deal.

The yen has been particularly weak versus the dollar despite a tighter monetary policy outlook given other influences such as the macro impact of the Middle East crisis on Japanese assets (with a more unfavorable macro outlook) as well as rising interest rate expectations in the rest of the world.

1M YTD

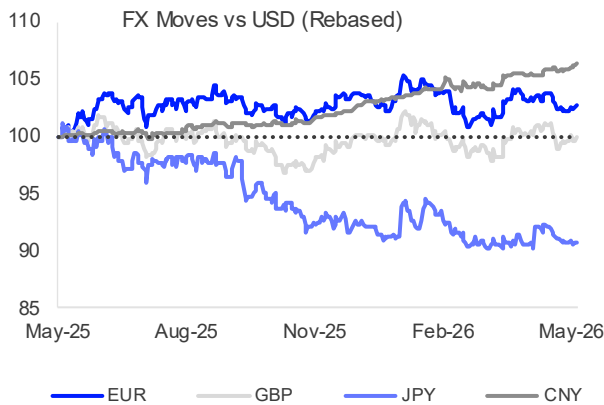

FX Moves vs USD– 1M & YTD

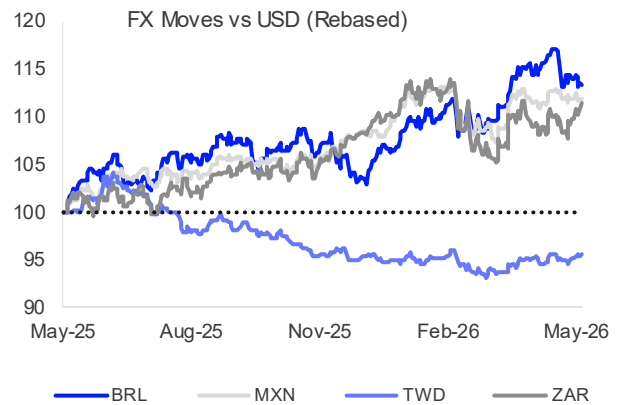

10Y Benchmark Yield Changes (%) - 1M & YTD

Over 12M, the yuan has appreciated steadily versus the US dollar, while the yen has weakened substantially.

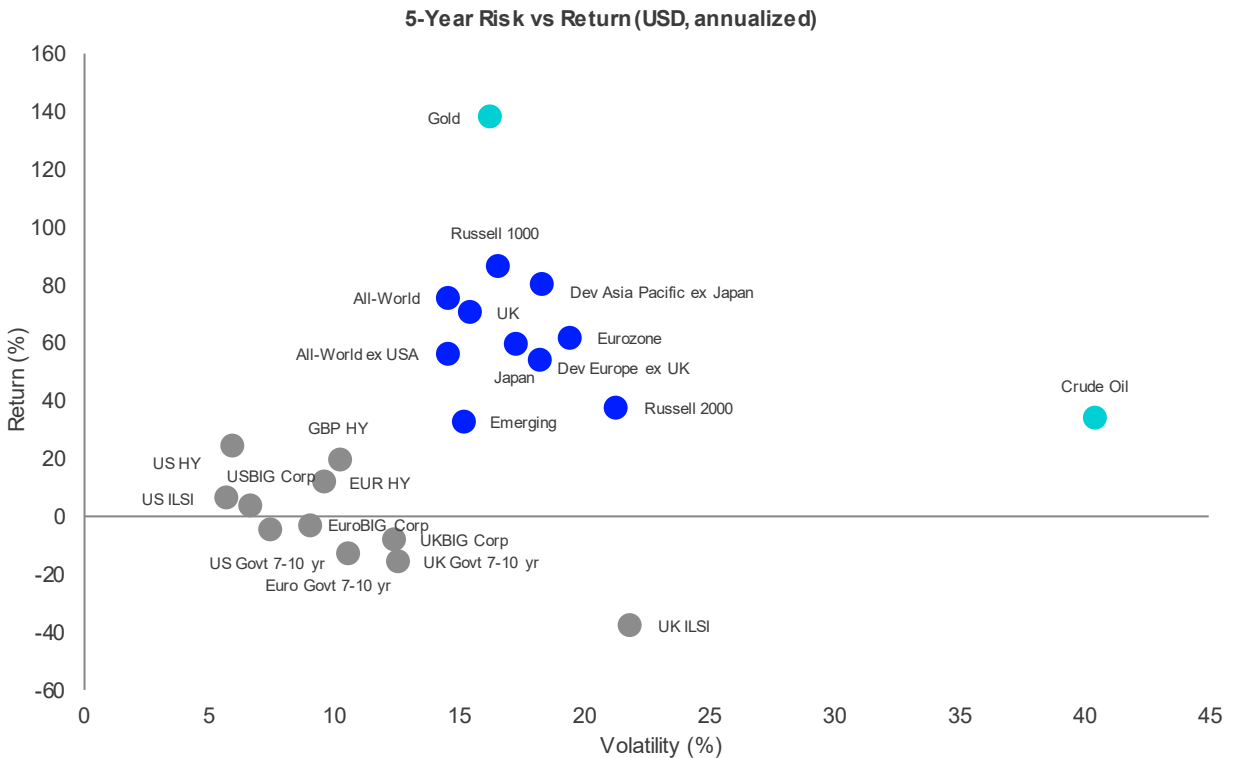

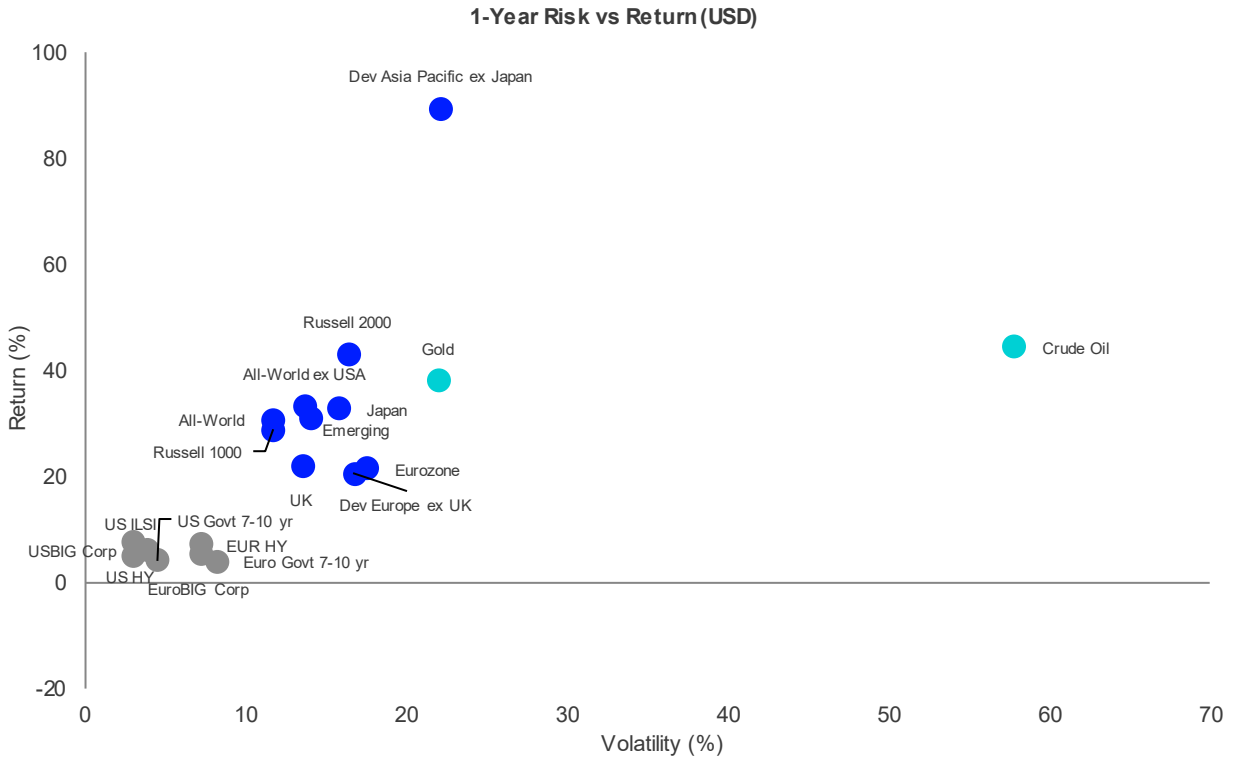

The real, peso and rand have gained notably versus the US dollar over 12M while the Taiwan dollar has weakened.

Source: FTSE Russell and LSEG. Data as of May 31, 2026. Past performance is no guarantee of future results.

Asset Class Risk/Return – 1-Year and 5-Year (USD)

After May's performance, Crude oil gave up some of its gains over the previous 12 months. Gold once again offered a better risk-to-return ratio than Crude oil. Among equities, Developed Asia Pacific ex Japan was far ahead of the next best-performing equity groups (FTSE All-World and Russell 2000) both in terms of absolute return and return for unit risk. Among fixed income sectors, US HY still offered the best return for unit risk.

Source: FTSE Russell and LSEG. Data as of May 31, 2026. Based on weekly returns data. Past performance is no guarantee of future results.

Correlations

Rolling 2-year correlations of regional equity indices relative to the FTSE USA index have declined since early 2025. As of May, US equities' correlation was highest with that of European equities and lowest with that of Asia Pacific ex Japan. In fact, US equity correlation with Asia Pacific ex Japan is at the lowest level in the last three years.

ABOUT FTSE RUSSELL

FTSE Russell is a leading global provider of index and benchmark solutions, spanning diverse asset classes and investment objectives. As a trusted investment partner we help investors make better-informed investment decisions, manage risk, and seize opportunities. Market participants look to us for our expertise in developing and managing global index solutions across asset classes. Asset owners, asset managers, ETF providers and investment banks choose FTSE Russell solutions to benchmark their investment performance and create investment funds, ETFs, structured products, and index-based derivatives. Our clients use our solutions for asset allocation, investment strategy analysis and risk management, and value us for our robust governance process and operational integrity. For over 40 years we have been at the forefront of driving change for the investor, always innovating to shape the next generation of benchmarks and investment solutions that open up new opportunities for the global investment community.

All information is provided for information purposes only. All information and data contained in this publication is obtained by LSEG, from sources believed by it to be accurate and reliable. Because of the possibility of human and mechanical inaccuracy as well as other factors, however, such information and data is provided "as is" without warranty of any kind. No member of LSEG nor their respective directors, officers, employees, partners or licensors make any claim, prediction, warranty or representation whatsoever, expressly or impliedly, either as to the accuracy, timeliness, completeness, merchantability of any information or LSEG Products, or of results to be obtained from the use of LSEG products, including but not limited to indices, rates, data and analytics, or the fitness or suitability of the LSEG products for any particular purpose to which they might be put. The user of the information assumes the entire risk of any use it may make or permit to be made of the information.

No responsibility or liability can be accepted by any member of LSEG nor their respective directors, officers, employees, partners or licensors for (a) any loss or damage in whole or in part caused by, resulting from, or relating to any inaccuracy (negligent or otherwise) or other circumstance involved in procuring, collecting, compiling, interpreting, analysing, editing, transcribing, transmitting, communicating or delivering any such information or data or from use of this document or links to this document or (b) any direct, indirect, special, consequential or incidental damages whatsoever, even if any member of LSEG is advised in advance of the possibility of such damages, resulting from the use of, or inability to use, such information.

No member of LSEG nor their respective directors, officers, employees, partners or licensors provide investment advice and nothing in this document should be taken as constituting financial or investment advice. No member of LSEG nor their respective directors, officers, employees, partners or licensors make any representation regarding the advisability of investing in any asset or whether such investment creates any legal or compliance risks for the investor. A decision to invest in any such asset should not be made in reliance on any information herein. Indices and rates cannot be invested in directly. Inclusion of an asset in an index or rate is not a recommendation to buy, sell or hold that asset nor confirmation that any particular investor may lawfully buy, sell or hold the asset or an index or rate containing the asset. The general information contained in this publication should not be acted upon without obtaining specific legal, tax, and investment advice from a licensed professional.

Past performance is no guarantee of future results. Charts and graphs are provided for illustrative purposes only. Index and/or rate returns shown may not represent the results of the actual trading of investable assets. Certain returns shown may reflect back-tested performance. All performance presented prior to the index or rate inception date is back-tested performance. Back-tested performance is not actual performance, but is hypothetical. The back-test calculations are based on the same methodology that was in effect when the index or rate was officially launched. However, back-tested data may reflect the application of the index or rate methodology with the benefit of hindsight, and the historic calculations of an index or rate may change from month to month based on revisions to the underlying economic data used in the calculation of the index or rate.

This document may contain forward-looking assessments. These are based upon a number of assumptions concerning future conditions that ultimately may prove to be inaccurate. Such forward-looking assessments are subject to risks and uncertainties and may be affected by various factors that may cause actual results to differ materially. No member of LSEG nor their licensors assume any duty to and do not undertake to update forward-looking assessments.
