

LSEG Identity Gateway

Connect once. Verify everywhere.

Navigating a shifting landscape

Fraud has become one of the defining risks of the digital economy. It is increasingly targeting identity itself, undermining trust across digital interactions and putting sustained pressure on how organisations establish, verify and rely on trusted identities.

According to LSEG Risk Intelligence research:

Across Europe and other regulated markets, expectations around digital identity and remote onboarding are evolving rapidly, driven by new regulatory frameworks and supporting infrastructure.

New frameworks such as eIDAS, including EU Digital Identity Wallets, are raising the bar for how identity is established, reused and trusted online, particularly within regulated financial services.

This shift introduces a **fragmented and complex identity landscape**, where organisations must navigate:

- ▶ **Fragmented national and private digital identity schemes**
- ▶ **Varying assurance levels and standards across markets**
- ▶ **Legal, contractual and operational complexity when adopting new identity methods**

As a result, organisations face a dual challenge: strengthening identity assurance in line with regulatory expectations, while delivering fast, trusted and scalable customer experiences across markets.

Introducing LSEG Identity Gateway

LSEG Identity Gateway is a unified platform that enables organisations to verify customer identities using trusted digital identity schemes from around the world — through a single API integration and one commercial agreement.

Key capabilities include:

- ▶ **Single integration**
Connect once via a unified API to access multiple digital identity schemes
- ▶ **Standardised outputs**
Receive consistent identity responses across schemes and markets
- ▶ **Single commercial agreement**
Reduce procurement complexity and vendor overhead
- ▶ **Built-in orchestration**
LSEG manages scheme onboarding, change and maintenance behind the scenes

Identity Gateway simplifies how organisations introduce higher assurance digital identity across markets — without the need to build and maintain country by country integrations.

Benefits of Identity Gateway

Regulatory readiness across markets

Operate with greater confidence in regulated environments as digital identity and remote onboarding expectations evolve across regions, including eIDAS-aligned frameworks.

Faster, simpler expansion with a single integration

Connect once through a single integration to access multiple trusted digital identity schemes, reducing the legal, technical and operational effort required to enter new markets.

Reduced identity-related risk and operational burden

Apply scheme-based authentication at critical moments to strengthen identity assurance and reduce reliance on manual reviews in higher-risk journeys.

Improved customer experience and conversion

Trusted digital identity enables lower-friction onboarding and authentication journeys, helping reduce drop-offs without forcing every customer through the same verification path.

Greater trust and privacy for customers

Customers authenticate through trusted authorities using real-time verification, reducing reliance on document sharing and repeated exposure of sensitive personal information.

How LSEG Identity Gateway works

One connection.

Trusted digital identity across markets.

Digital Identity Gateway acts as a global orchestration layer between your customer journeys and trusted digital identity schemes.

Apply digital identity at the point of need

Use higher-assurance digital identity selectively for onboarding, account changes or higher-risk interactions.

LSEG manages scheme complexity

Identity Gateway routes authentication to the appropriate trusted identity scheme and handles scheme-specific requirements behind the scenes.

Receive consistent, usable results

Verified identity attributes are returned in a standardised format, ready to integrate into existing onboarding, risk and decisioning workflows.

This approach enables organisations to strengthen identity assurance across markets without adding friction or operational overhead.

What differentiates LSEG Identity Gateway

Built for global operations

Designed for organisations operating across markets and jurisdictions, where identity schemes, standards and trust models vary.

A gateway, not point integrations

A single orchestration layer that manages identity scheme onboarding and lifecycle centrally, avoiding repeated market-by-market builds.

Backed by LSEG Risk Intelligence

Delivered by a trusted global risk partner with deep expertise across identity, fraud and financial crime risk.

The LSEG Risk Intelligence advantage

Your partner in strengthening digital trust

LSEG Risk Intelligence is a trusted partner to organisations worldwide, supporting confident decision making across identity, fraud and financial crime risk. With deep expertise and a long standing commitment to innovation, we provide the tools organisations need to strengthen trust, manage risk and operate with confidence.

From screening and due diligence through World Check, to identity verification, account verification and fraud risk solutions, our portfolio is designed to support trusted digital journeys across markets and over time.

Identity Gateway is part of this broader commitment — helping organisations strengthen identity assurance at critical moments, while remaining flexible as technology, regulation and fraud risks continue to evolve.
