2.0 Overview

The High Speed Vendor Feed (HSVF) market data feed uses a TCP/IP broadcast interface. Each message type is fixed in format and messages are non-blocked (i.e. the Exchange does not wait for an acknowledgement before sending the following message) re-transmission of any data is available.

HSVF messages consist of a standard message header followed by the message body which varies in format according to the message type.

2.1 Transmission format

Each message is framed by an STX and an ETX character. The format used is:

S T X	MESSAGE HEADER	MESSAGE	E T X
-------------	----------------	---------	-------------

STX and ETX indicate the beginning and the end of the record being transmitted.

2.2 Message Header

The standard message header attached to all messages has the following format:

Field Name	L=11	T	Definition / Validation Rules
Sequence Number	9	N	Each message is assigned a sequence number starting at '000000001' every day and incremented by 1 for each message sent. The sequence numbers will range from 000000001 to 999999999 (decimal, ASCII) with wrap around. <i>Note: Retransmitted messages will contain the original sequence numbers.</i>
Message Type	2	X	Identifies the type of message being sent. Format is left-aligned, right 'blank' filled (if necessary).

Notes:

16 August 2013

- 1) For a retransmission (type 'A' or 'C'), participants should keep the same parameters (Type of market data / GAP Control / Option classes requested).
- 2) Participants are required to reconnect every day. If they do not disconnect, their connection is disabled by the Exchange at the end of the day.

7.0 Strategies

7.1 Strategy Trade Definition

A Strategy Trade is a message notification of a transaction on a strategy (which are 2 instruments being involved in the 1 trade). The current established exchange strategy trade types are the following:

Strategy Type	Market	Format	Example
Future time spread	Turquoise/IDEM	(CLASS SYMBOL)+(YEAR CLOSEST EXPIRY LEG)(MONTH CODE CLOSEST EXPIRY LEG)-(YEAR FURTHEST EXPIRY LEG)(MONTH CODE FURTHEST EXPIRY LEG)	FFI100+1 M -1U
Future time spread	Oslo	(CLASS SYMBOL)+(YEAR FURTHEST EXPIRY LEG)(MONTH CODE FURTHEST EXPIRY LEG)-(YEAR CLOSEST EXPIRY LEG)(MONTH CODE CLOSEST EXPIRY LEG)	OBX+1 F -1E

Flexible combinations and all other strategies with same Contract Size and Tick Value	All	(CLASS SYMBOL)_FC_(GROUP ID)(SAIL ID)	OGZD_FC_e5E210
Flexible combinations with different Contract Size and/or Tick Value	All	To be defined	

7.2 Strategy Quote Definition

A Strategy Quote is the first limit of the market depth message diffused from the Exchange routing engine for a strategy Instrument. It has the current established Best Bid/Best Ask, and Best Bid Volume/ Best Ask Volume (**not** including **hidden** volumes). It is a simple snapshot of what the market conditions are on the Instrument. The same types of strategy rules written above apply in the same manner for the strategy.

7.3 How to Process Strategies

7.4 Messages to Use

- JS (Strategy Instrument Keys)
- J/JF (Leg Instrument key messages for options, and futures)
- NS (Strategy Summary Messages)

7.5 Process

1. Collect all JS Messages broadcasted in the HSVF and maintain all of their Symbols for future linking to the Symbols in the NS message which will be disseminated after the HSVF JS message. Note JS messages can be broadcasted in HSVF at anytime during the normal trading day for newly created User Requested Flexible Combinations.
2. For each J/JF message record, create and maintain a table of Leg “Symbol - HSVF External Code” couplings.
3. For each leg received in each NS messages:
 - Find the HSVF External Code which is now coupled to the leg Symbol created in step 1
 - Generate the leg description by joining the:

16 August 2013

March. Finally, the three last figures in the series designation show the option's exercise price. For example, 12 in the series designation: OGDZ2C12 tells us that the agreed price for the Gazprom stock is 12 USD.

In the event of a share split, new issue of shares or similar events that imply a change in the strike price and/or the number of underlying stocks this is shown by the letter X, Y, Z or Q in the end of the series designation.

8.2 Futures Series Designation

Futures and forward series are designated by the symbol for the underlying stock or index as well as by giving certain codes for the expiration year and month.

Assume a standardised futures contract with series designation RIOB2C. What underlying instrument the future is related to, is designated by the instrument symbol, in this case the RIOB index. The expiration year is designated by the last number of the year the futures expires, for example the figure 2 stands for year 2012. The month the contract expires, whether it is a stock future or an index future, is shown by a letter code which goes from A to L for index futures and from M to X for stock forwards and futures, as shown below. In our example, the letter C shows that the contract is an index future with expiry in March.

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Index futures	A	B	C	D	E	F	G	H	I	J	K	L
Stock futures/forwards	M	N	O	P	Q	R	S	T	U	V	W	X
FTSE 100 Index Futures	F	G	H	J	K	M	N	Q	U	V	X	Z

In the event of a share split, new issue of shares, or similar event that imply a change in the price of the stock forward, and/or the number of underlying stocks, this is shown by the letter X, Y, Z or Q in the end of the series designation.
